Man, that's sick. If you don't like Bush, that's certainly your right. But leave Jessica out of it. She has no more say in national politics than you do. She's just a kid who enlisted and very much ended up in the wrong place at the wrong time. That happens in these conflicts. Don't increase her suffering by belittling her now.

Dwight Stewart (W5NET)

Different strokes for different folks, Frank.

In my view, I didn't give up anything when I built in a neighborhood with restrictive covenants. Instead, I gained the peace-of-mind that the neighborhood wouldn't decay. I gained "rights" as I agreed to covenants that I would have followed anyway, because my neighbors will as well.

Your "public sector versus private sector" infringement of rights arguments isn't simply valid in this case because it is voluntary. My rights are just fine, thank you.

However I do agree that there are plenty of cases where the public sector (government) does infringe on the rights of private property owners. I am vehemently against it. I believe it is unconstitutional for a city government to use eminent domain laws to force an owner of private property to sell it (so the government can grant the land to a developer who will build a shopping center) because the government will make more tax revenue on a new shopping center. Yet this is happening time and again all over the United States. It' just plain wrong.

|^ Antennas are reciprocal, if they wouldn't work well for
|^ transmitting, they will work equally poorly for receiving.
|
|I don't believe that. It's been my experience that an antenna used for
|receiving will function satisfactorily over a much broader range of
|conditions (environment, antenna length, etc.) than it will if used for
|transmitting under those same conditions.

Mmm. In the case of atmospheric limited SNRs that is true. A trailing
wire under sea water receives just fine at ELF and doesn't work worth
a damn for transmitting. But those are special cases that can always
be manufactured. Beverage antennas are also not something to be used
for transmitting but you won't be disguising one as a chimney cap
either :)

In the general sense of h-f to microwave, I stand by my claim.

Wes

|> Believe what you will, the law of reciprocity will ignore your beliefs
|> and continue to function.
|
|1. It's only a "law" for scalar radiation (like sound), not vector
|radiation (radio). To be sure, it's a fine approximation for most HF
|antenna systems, but watch out a microwave frequencies, especially if your
|antenna system contains a "circulator".

Heh heh. When the guys from MIT come out to argue with you, you know
you're in trouble. But fools rush in...

I have made thousands of measurements in anechoic antenna ranges and I
have never seen a difference between measuring s21 and s12. (Without
the circulators, and accounting for mismatch effects of course)

Where did I go wrong?

|2. In the cases where reciprocity applies you would be correct to say that
|it requires that the antenna directivity and efficiency are the same for
|transmitting and receiving. It does not follow, however, that a poor
|transmitting antenna is necessarily a poor receiving antenna. Efficiency
|matters much more when transmitting than it does when receiving.

It also does not follow that a lousy receiving antenna is good enough.

For example, I *always* got better moon echos on 2-meter EME using the
same antenna for transmit and receive. When I tried a wet string on
receive I didn't hear nuthin' <g>

I have observed the same on 20 meters. My Yagi at a modest height of
50 feet is *always* better than an indoor wire.

|
|Franks's observations are correct, and can be verified if you do a
|detailed signal to noise calculation. You could also try the experiment
|yourself.

Two experiments cited above.

Hi,

For ongoing topic on antenna restrictions and related subject go here:

http://www.eham.net/forums/AntennaRestrictions

I also live in a restricted lower middle class working guy/gal development (PUD)

all new construction in the area had these restricted covenants. No way around it
unless you buy older homes in older neighborhoods and you may pay a lot of money
for smaller home but well built and no restrictions.

Most restrictions duplicate local rules, like letting the lawn grow a foot tall or parking
any cars on the front lawn or backyard, etc...

a few crazy people on our board, one rides his mobility scooter and takes photos of any
and all things he don't like, get a life pal ! he is crazy.

As you will read in the above eham topic, one poster points out that the homes in the
big buck area like beverly hills etc, have NO RESTRICTIONS and many are hams !

he also writes that these restrictions do nothing to increase home values.

do visit the above link very informative

Certainly below 30 MHz this is represents a correct observation, verifiable both by calculation and experiment. Why should this reality change with the newsgroup?

Sounds like you're in "Beverage on the ground" territory. That works too, I'm told (I live next to a swamp, so the tall maples are my friends :-). I've never tried a Beverage on the ground, although I have used a long skinny island as a slot antenna (worked very well from longwave through tropical bands, useless above 10 MHz).

This probably doesn't have anything to do with anything, but it crossed my mind some weeks ago, with all the controversy over the removal of Judge Moore's monument to the Ten Commandments. After the removal, I pretty much expected Judge Moore would put the monument on his front lawn. It's his property, and he should be free to do so. Well, maybe Judge Moore rents an apartment or lives in a condo and doesn't own a front lawn. But wouldn't be ironic if Judge Moore negligently signed onto a list of restrictions which effectively banned any such monument on his own property?

If it's government using eminent domain to effectivly transfer private property from one owner to another private owner, yeah, there's a big problem there. Even if it's not a Constitutional problem, the voters should be deeply skeptical of all the promises the politicians make about these wasteful projects. But we have a long history of being negligent with our votes, as well.

trying to record traffic on talk groups I have loaded into the BC 780 xlt.

It looks to me that that it can be done but when I go to the menu
commands and set what I think is the correct settings
menu
3 trunk data (select)
bank 1 (select)
down down arrow (limit) to 3 Record (select)
1 on (select)

I have hooked a mono patch cable to the line out and have tried with
both a tape recorder and a windows program that allows me to record
audio from the line in jack of a sound card.

I know I am missing something simple but its escaping me right now.
Any ideas what I need to do?

"RP Jones" <rparsley@verizon.NOSPAMnet> wrote in
news:LOEvb.1440$rS5.780@nwrdny02.gnilink.net:

I work with a guy that is the president of a Home Owners Association.
Talk about an asshole. A woman in his area approached him to get
permission to have a yard sale. Of course he vacillated, and she grew
angry. He reassured her that her request would be considered by the
council.

Of course, her request was denied. All those cars parking in front of
other people's property would not be fair to the other people.

Fair, fair, fair. boy have I tired of this word.

This guy seems severely traumatized by the fact that these neighborhood
associations no longer have the ability to regulate satellite antennas
39.37" or smaller in diameter.

We have trouble with our interloping neighbor even though we don't live
in an area covered by these prohibitions. The neighbor is the vice
president of the city council in the small borough that we live in near
Pittsburgh. We first moved here, she expressed a desire for us to cut
down (for safety reasons of course LOL), every freakin tree on our
property. She made sure to tell us that the leaves on our property were
"our responsibility" to rake up. (hell, I didn't put them there, the
trees should have to rake them up). We had the diseased trees removed at
a considerable cost, and had the others trimmed.

You think that she would have had a geriatric orgasm. Noooo, she found
more things to harp about. My son had bought a 1967 Chevy that we parked
at the top of our driveway, even though the car was not licensed, as it
needed work before it was roadworthy. We were away for the weekend when
the local police drove onto our property and tagged our car as abandoned,
we had a week to get the car licensed. Enter Classic car plates. We had
to get regular plates for our car, then subsequently applied and were
issued classic car plates. The car was legal, they couldn't tow it, and
there it sat as before her interloping started.

But she never quits. We wanted to erect a privacy fence, but in this
relatively dilapidated neighborhood, believe it or not, there is an
ordinance against them. We had to resort to a shadow box fence. Prior to
this, we had the property surveyed, and the front of our property
includes a small part of what the neighbors assumed were theirs.
Apparently the loss of a small part of their property was too much to

bear, as the survey spike was removed and moved closer to our property.

Imagine this woman in charge of a homeowners association? I'd rather live in the country in West Virginia (I like West Virginia, very pretty country) with a refrigerator on the front porch and a small junk yard in my front yard than to live in a neighborhood covered by a covenant. Years ago in a telecommunications magazine, I read an article in which an amateur had crafted an antenna, essentially a pole with a narrow skirt, and placed it in the yard. He told the neighbors that it was a birdfeeder, and that the design was to preclude squirrels from climbing it. The only problem was that other neighbors began to ask if he could help them construct similar birdfeeders. Well, at least theirs won't require a buried wire running to them.

I would NEVER live in a place that tries to tell me how to run my house or yard. I'd tell them to go F%^K themselves and move.

I never understood why people put up with such bulls^&t.

3024. Help with noise on RS Pro-82

Newsgroup: rec.radio.scanner
Date: 2003-11-22 14:57:32 UTC
From: John Ellenberger <johne@jellenberger.org>
Message-ID: <vrv19qbo3bnmeb@corp.supernews.com>
Source record: 24630

I purchased the Radio Shack Pro-82 as my first scanner. Works reasonably well with the included antenna. I bought an external antenna from Radio Shack and when I hook it up I often get noise that overrides all channels. The noise starts out with two very loud tones and then it sounds like a phone conversation in the background and often the loud tones repeat. The seems to happen in bursts of a few minutes and basically the scanner is useless during this activity.

My only theory is that its somebody talking on a Nextel phone(?)

Any ideas on what it is and what I can do about it?

John

3025. Re: Newbie on Pro-95 Trunking

Ran the handheld off of a 10' piece of RG6 direct to the discone, There was
a slight trunking reception improvement over the connection inside the
house, but nothing compared to the RS telescoping antenna. So, either the
discone is junk, or I do not have it in the right location. Currently it's
about 15 feet up a mast on the side of the house. Can't roof mount it.

The supreme court has ruled that it s perfectly legal if the aim is to
improve the tax base.

The most oppressive, draconian, government entities are your local zoning
boards.

Stinger, HOA are mostly comprised of residents that never have had a job where they supervised other humans and now is their chance to tell someone what to do. I do agree that no one want's a junk yard in their neighborhood. But I don't agree that the guy next door can/should be able to tell you what you are permitted to do on property you pay the mortgage, taxes and up keep on. He/she or they can frankly go to hell. The plan I (for DOC) "BOUGHT" a home in even has restrictions of 18' satellite dishes, part of the antenna restriction clause. Since the latest FCC decision the HOA can kiss that part good by. And yes, receiving antennas can be hidden quite well. Some of us are licensed ham and enjoy our hobby as you do. Just because we move into a new home in a new area why should we give up the hobby we so enjoy? We shouldn't have too. Not all hams have gigantic towers and beams, some of use are satisfied to use a piece of wire to TRANSMIT on. I have and will continue to do so when I move. HOA's bring out the evils in good people, we have to get sneaky and stealthy to enjoy life as we have for many years.

I know, I've heard this before. It was our choice to purchase in a plan with restrictions, show me a plan or find me a plot (1/2 acre) of land where there there are no restrictions in the U.S.A.. If the politicians arn't telling you what to do it's some nosey neighbor.

Ya'll have a positive day.

|>
|> Where did I go wrong?
|
|You didn't ionize the air in the range :-)
|
|Seriously, for your purposes you did nothing wrong. Just don't call
|reciprocity a "law", OK? It's a useful idea of wide applicability, but
|physics does not require it in general. Calling it a law confuses people.

I never made that statement.

[snip]
|
|Directivity matters equally for receiving and transmitting. Was your wet
|string as directive as your other antenna?

I don't know. Remember I live in the desert; I couldn't keep the
string wet long enough to find out.

|2 meters is also quiet enough
|that there's not much room for inefficiency: in some directions the sky
|temperature is <200K.

Yep. Love that quiet sky.
|
|>
|> I have observed the same on 20 meters. My Yagi at a modest height of
|> 50 feet is *always* better than an indoor wire.
|
|Throw a thin wire with dark brown insulation over a tall tree, up over one
|side, partway down the other (shaped like a "?"). Tie it in place with
|nylon fishing line. It will be invisible unless you're very close. Couple
|to coax with a grounded 9:1 broadband matching transformer. Bury the coax

|run to the house.

Tall tree? What's a tall tree? The best I have is some 35 foot tall
Saguaro cactii. They're a bitch to climb, although when the coyotes
went after the cat, she managed. Let's see, I could tie a string to
the cat's tail and find a coyote.....

[snip]

|> In the general sense of h-f to microwave, I stand by my claim.
|
|For the special case of confinement to a small number of narrow bands (as
|in ham radio), you are reasonably correct above 10 MHz. To me as a
|hobbyist listing to LW/MW/SW, that isn't the general case. Of course the
|game changes when I'm operating a satellite, but that isn't my *hobby*.

See, one of the groups this got cross-posted to is an *Amateur Radio
Antenna* group. I'm reading and writing it from this group and
commenting from that perspective. I normally don't cross post but did
the first one by accident and since I've developed such a loyal
following I didn't want to lose anybody <G>.

Typical example where that woman runs her house with an iron hand and tries to do the same with other households, like yours. Just do as she tells you or she may sell your home from under you.

She needs to wake up. The would doesn't revolve around her.

yep sounds like very close bleedover to me.
have a scan of the portable phone freqs (lists r on the web)
probably a wander phone of a neighbour.

do this on the duck, then u should find it.
then it's time to make a coax stub filter
very easy, plans r on the net also

u r not along on this problem.
most , bar the really expensive scanners do it.
sadly their front ends r very open.

could try changing the ceramic filter if u r that way inclined
not too diff, but u need to know about electronics.

as an after thought.
try earthing your coax braid to a radiator or water pipe
that might help

3033. Homeowner Association Nazis (was: Re: Outwitting)

Newsgroup: rec.radio.scanner
Date: 2003-11-22 16:19:01 UTC
From: southdakotaradio@aol.com
Message-ID: <20031122111901.12501.00004133@mb-m04.aol.com>
Source record: 24632

HOAs are one of those things that sound good in theory, but often abused in actual practice.

Nobody can argue with the premise of keeping your neighbor from starting a junk car collection or allowing the grass to get knee-high and go to seed. The problem is that the HANs (Homeowner Association Nazis) get carried away and corrupted with their power.

I once made the mistake of living under the thumb of the HANs. Actually, I didn't have much choice in the matter. In Phoenix, you either live in a deed-restricted home or else you live in the hood. All desirable communities are controlled by overbearing HANs.

During the time I was there, I received several "violation notices" for petty issues. There was the time I got one for "parking on the grass." Actually, I was parked on the driveway, but had my vehicle over on the far left as to allow sufficient space for the other vehicle which was parked in the garage. Didn't want the wife to have a "blonde moment" and hit me as she backed out!

My tape measure showed my rear left tire to be 3.5 inches off of the pavement. According to the HANs, this constitutes "parking on the grass."

Then there was the time I was cited for "improper display of address." All homes are required to display standard-issue black address numerals in a specific location on the house. (Kinda sounds like branding identifiers on foreheads, doesn't it?) I had the HAN required numbers in the HAN designated place. No problem there. But a shrub which had been planted below the numerals had now began to grow towards the house numbers.

Again, I grabbed my tape measure. The top of the shrub extended approximately 1/2 inch past the bottom of the 6 inch numerals. According to the HANs, this constitutes "improper display of address."

You basically have no rights when confronting these quasi-governmental agencies. If you don't comply with the violation notices within a specified period of time (usually 10 days), the HANs will file a lawsuit against you for non-compliance. If you choose to go to court, they will then use YOUR money (collected in the form of homeowners association dues) to fight against you until your funds are depleted and you give up in frustration. They will then sue you again for reimbursement of their attorneys fees. If you don't pay, they will secure a lien against your house. If you still don't pay, they will sell your house out from under you! Under the terms of the HAN agreement, they can do this. You relinquish all your legal rights of ownership when you sign one of these restrictive covenants.

There have been numerous instances where HANs have taken the homes of elderly people on fixed incomes (who fell behind in their dues) and war veterans who

have erected flag poles on their property. Folks, these things are bad news. Avoid them if at all possible.

Fortunately, I moved away from Phoenix and am no longer controlled by the HANs. Here in South Dakota, these fiefdoms are pretty much non-existant. Private property rights are accepted and expected here. If I want to put up an antenna or change my oil in my driveway, I have the right to do so. As I should, since it's MY PROPERTY.

^ me through many things on the Pro-95.
^ http://marksscanners.home.att.net/95-1.html

That should do it. The software (WIN95.EXE) should be easy to operate if you understand how to operate the radio.

You can skip the SETTINGS tab for now. Most of those settings are OK in their default configuration or they are things that you will be changing when you use the radio in a normal manner.

You can also skip all the other tabs for now except CHANNELS. Here are some brief instructions for the CHANNELS tab:

LEFT HALF OF DISPLAY
BANK: changes the tab to the bank you wish to work on at the time.

NAME: A label for the bank that helps you to remember what is in the bank.

CLOSED: Applies only to trunking. When checked, the only talk groups that will be listened to are those that are listed in the talk group list at the bottom right and are not locked out. If this is not checked then all talk groups will be listened to.

TYPE: EDACS, MOTOROLA, or CONVENTIONAL. EDACS for a bank that contains EDACS trunking frequencies, CONV for a bank that contains only normal frequencies. Normal frequencies can also be used in a bank set to EDACS or MOT.

FREQUENCY LIST: Here's an example:

0.00000 FM D A L
866.31250 EDACS
866.81250 EDACS
867.31250 EDACS
868.31250 EDACS
867.81250 EDACS
854.96250 EDACS
868.81250 EDACS
854.96250 EDACS
CALCORD 156.07500 FM X

RIGHT HALF OF DISPLAY
Skip all the Motorola stuff.

CLEAR TRUNK INFO: Empties the trunk ID box below.

0-4 ON/OFF: A trunking bank can have 100 talk group IDs and they are listed to the right in groups of 20. The buttons 0-4 change the list to that particular group of 20. The check box to the right of each number (0-4) serves as a general lock-out for the entire group if not checked.

DEC/HEX/AFS: Select which number format you will be using for talk group IDs: decimal, hexadecimal, or agency/fleet/subsystem. These number formats all convert to the same value, they are only different ways the number can be entered and displayed. For example these are all the same:

Dec: 0273
Hex: 111
AFS: 02-021

Oh, I agree. Most of the cops I've met are pretty decent fellows. I got to know a lot of the local cops one summer after I started grilling late at night after work (two or three in the morning). Obviously, it wasn't long before cops started driving by to see what the heck I was doing. That eventually led to passing conversations and even to several getting out of their cars to talk for a while. On some nights, I had three or four police cars parked in front of my house and five or six officers sitting around the yard talking. A couple of them even started bringing hamburger, buns, and so on, to throw on the grill.

Of course, all of this led to some very strange looks from people driving by (perhaps because the cops were just sitting around - a cop in uniform grilling in the middle of the night may have looked a little strange also), and questions from some of the neighbors, but I didn't care - I had the safest house in town while they were there. I also knew more about what was going on around town than most. And, finally, I also got the radio frequencies for every police, fire, and law enforcement, agency in this part of the State (including many frequencies I didn't even know about) and lists of the codes they used.

Well! If they were on lunch break, what would it matter? They have to eat too! Who knows, could be their last! I have no problem with it. The neighbors should have felt safe too! G.W.

I don't disagree, Mark. I acknowledged that CW gets through better. But I was saying that if HF was somehow screwed up enough to prevent voice on "ANY" frequency (very unlikely, but that was the argument made), CW probably wouldn't get through either. In that regard, CW is better, but it's not "THAT" much better.

Of course, since the very premise described is highly unlikely, the whole thing is a fairly silly argument.

There was legislation proposed last year in the House of Representatives that would have prevented Home Owner Associations, and similar groups, from banning the use of outside antennas by Ham Operators. The idea was to apply the same "reasonable accommodation" rules that previous legislation had done regarding towns and cities. The legislation was supported by several House members, sent to committee for review, and I never heard anything else about it. Perhaps someone else is aware of what actually happened to it.

No, it doesn't have that limit. The first paragraph describes antennas for satellite services and the second paragraph describes antennas for video programming services. The third paragraph...

(3) An antenna that is designed to receive
local television broadcast signals. Masts
higher than 12 feet above the roofline may
be subject to local permitting requirements.

...describes antennas for broadcast television and no size limit is described (only the height limit). By the way, a large 20M beam should receive broadcast television fairly nicely (with a little hardware to cut out the television while transmitting).

Trees! Can't live with 'em, can't live without 'em! Mr. T moved into one of our most exclusive suburbs back in the 80s. Like many new homeowners, he wanted to do some landscaping. In Mr. T's case, landscaping meant shaving everything outside his mansion down to a stubble. Mr. T announced his landscaping decision with a wailing chainsaw. The startled neighbors reacted as strongly as if T had been firing a poorly aimed automatic weapon. Amusing court battles between the Newly Wealthy Thespian and the Inheritors of the Robber Barons

ensued. Oh, if only the oil refiners, the meat packers and the industrialists who built the North Shore suburbs had the foresight to see that an environmental vandal might show up right there in their midst!! And all of this happened without CC&Rs. Just as well. I'd pity the fool who'd try to write up Mr. T to a Homeowner's Association.

I have no doubt that most Homeowner's Associations are run by decent and reasonable folk. I'm sure that's true of most small public governments, as well. But what happens when things go bad? Given the sorry state of human nature, it will, sooner or later. There's small time control freaks in private and public life. But we have a better chance with them if we don't sign away our rights.

If it's new RG-6, and is even reasonably decent quality, it should be
ok. Some is ok at first, but only lasts a couple of years before it
starts getting real lossy, and 800 is going to be the first affected by
it when it starts to go. How many feet are you running?

Don't need a homeowner's association to prevent those kinds of violations.
Cities have ordinances against them. If someone violates the ordinance you
can file a complaint.

Again such CB operation is illegal and they can be just as big or bigger a
nuisance with a mobile operation. Some of these guys have multikilowatt
amps in their vehicles.

Such association rules force the LEGALLY LICENSED operator to use low height
indoor and hidden antennas. Theses types of antennas are far more prone to
generate interference than something well up on a tower.

There are often good communities without covenants, where your property values do increase and the sale of a home is relatively easy. This lets you "have your cake and eat it too". You could put up that antenna now and take it down when it is time to sell.

As I said before, cities and communities have ordinances against these things (except the purple roof). Except in decaying neighborhoods, such city ordinances are enforced.

We've strayed pretty far from radio, so this will be my last post on this subject. I hardly want to be in the position of defending ALL homeowner's associations.

I think the key to being happy with a homeowner's association is to have clear, concise, SPECIFIC covenants that aren't subject to liberal interpretations and that cannot be amended by the board without 100% approval from every single property owner. The ones in my neighborhood follow that model and are just that -- simple, and basically just commonsense good-neighbor policies.

There is a neighborhood in our town that did not follow that key, and they do indeed have problems. A bunch of retired busybodies managed to get control of the board, and have become a pain in the neck for working families or people trying to build new homes. I would never have built there. Their problem is that the development was originally designed to be a resort / weekend home development, but retirees have moved in and want to pretend that it's a high-end property.

Meanwhile, our neighborhood is great, and is in high demand.

Again, the point I am making is that neighborhood covenants are not ALL bad -- just some of them. (But these are the examples I'm seeing time and again on this thread, mostly from people that don't live in covenated neighborhoods anyway).

Frankly, I think that anyone that doesn't have their attorney help them review neighborhood covenants before they purchase property deserves exactly what they get. I'll bet most of these people don't have a Will, either, which is an similarly foolish situation.

What discone is it, most are the same electrically and only differ in price and quality of materials, but there are some of the oddball ones that dont seem to work well on 800. A 5 buck ground plane made from coat hangers and a "F" connector and hung in my attlc blows the Icom discone out of the water. 460MHZ signals that are full quieting on the ground plane are hissy on the discone. 800 is the closest they get, and the GP still beats it easily.

You still may be overloading the 95, what do you get with the duck? If you hear them ok with it, I would guess some nearby transmitter is blasting you. I have an easy test here, any scanner that gets no intermod in 460 or 851-855 and can hear everything on the scantenna is pretty good, and not many handhelds can do it, the 93 included (a 95 is pretty much the same radio, with more channels). There's a local PD right across the river and it can be heard on FM radios lots of the time. On high end radios with S-meters I have had, it pegs the meter with a 4" hunk of wire stuck in the center, and can be clearly heard without any antenna at all. If a scanner can't hear it at all, it's

really dead. I have had a few that as soon as the antennas (any of them) are hooked up, they get seriously deaf. My BC9000 XLT gets hash all over the place when any of three nearby transmitters is keyed up, but it still hears most everything. My RS Pro 2004 and 2005's are much better.

On almost all my handhelds, except for a couple of the ham HT's, I have to run a duck on them, or keep the telescoping whip really short to keep them "clean".

>

Many areas with restrictive covenants DO decay. The homes get old and out of date. The shingles aren't replaced often enough and so on. The covenants generally do not and cannot force a specific maintenance cyle on people. I seen some very run down areas that had covenants. Yeah the grass was mowed and there weren't any junk cars but the houses looked old and tired.

That is not the purpose of eminent domain laws. If the law has been abused in such a manner, then the citizens affected should be filing a class action suit.

Any time i have asked people why they would live with such restrictions, they always say that they don't want their neighbors having junk cars in their front yard. I have never lived in a neighborhood with a homeowners association. I have also never had the junk car problem. Generally, if you don't live in a slum, you do't have much to worry about. In any case, most towns have "eyesore laws" that cover this.

BDK, it was the discone. As a test I picked up a cheap RS 20-176, and 800 trunks are crystal clear. It was an antenna warehouse super discone. I emailed them and they are going to exchange it for a scantenna for a niminal fee. Generous of them I thought.
Thanks again,
Harry

When I lived in Austin, a ham on the air gave me an
excellent possible solution to the problem of
annoying home owner association self-appointed
gods.

He had lived in such a "anti-antenna" residence
at one time that didn't allow him to erect any outside
antennas. Therefore, he put a dipole up in his attic,
took ALL filtering out of line that he possibly could
and put the largest amplifier his money could buy
inline and began blasting away.

Of course he got knocks on the door, and people
beginning to complain, but they no longer had a legal
leg to stand on due to the FCC's requirements that
nearly all electrical gizmos and doo-dads "accept
any interference that results from other nearby
operating .... blah blah blah..."

The ham then told the home owners that this
was the result of having to move an antenna to the inside
of his attic to remove it from site, and gave them some
mumbo-jumbo jargon about why it causes more
interference than having it outside and high in the air
(referring to his antenna). Of course, he simply didn't
mention the huge planet-busting amplifier or the fact
that he removed all his filtering that he possibly could.

The home owners, believe it or not, made an exception
for him, after all the residential complaints about televisions,
telephones, baby monitors, answering machines and everything
else getting tore up constantly from RFI.

I recommend more hams doing this if thier home owner
gods become assholes as well.

Clint

HARRY , Thanks for that website that put everything in perspective so
to speak. I'm still looking some info on the software win95. Most of
my programing is done. With the website you gave me I can do it on the
scanner and with the right cable I can upload to the computer to
better understand the program.

Thanks again, Bryan

I wouldn't. I'd recomend that if you can't abide by the
rules
that you said you would, then either don't sign the contract, or
move. All these little tales say more about the person's moral
fortitude than it does the HOA's policies...

LOOK.... I did NOT say you were one of his followers. I was merely making a point, there was a war which included some of his followers AND YOU. IF the man is dead, LET HIM REST IN PEACE.. WHY THE HELL does this shit have to start again?

I don't give a rats ass if you were his follower or worst enemy, this war has no place here anymore. Let's get back to SCANNERS. G.W.

Jeezy petes! How long has this guy been around? A week? Two weeks? Anyone who has been fooling around with shortwave propagation for any amount of time can cite oodles and oodles of times when CW made it through and voice did not.
Me thinks this is more an editorial by a guy who either hates the code or never could cut it.

Hi

I agree with you, however, all the new homes have these restrictions, why ?

answer, to get a loan the banks want the restrictions and the builder wants them
so nobody gets out of line before he sells out all the homesites.

Otherwise he gets stuck with unsold lots and homes and can't pay the loans he got.

It I wanted to drive north or south of the city I live in I could get a nice lot, build a nice
house and do anything I want.
Problem is the schools are not as new and up to date compared to those in my county
I currently live in.

Also the commute is something to think about and utilities available.

In much of the world, it isn't an option, and at this point, a GMDSS
beacon without GPS, but with auto deployment is about 600USD.

Forr about $950 you get one with a GPS built in.

That my frined, is very cheap life insurance.

You trip off a GPS equipped GMDSS, and within 5 minutes, half the
world will know it has gone off. In addition because GMDSS beacons
have ID's, they will know who/what you are as well, and on the GPS
equipped versions, will know where you are +/- about 30 meters.

By contrast, EPIRB 121.5Mhz systems may take several hours to come
with a good fix on your location, and tell the authorities nothing
about the unit that has gone off.

Given the choice between a 121.5Mhz EPIRB and a 406Mhz GMDSS, I'll
take the GMDSS anytime and everytime.

All part of the fascist-izing of America.. whatever happened to "a man's home is his castle"?

I can understand where people have a right to not want someone storing a dozen rusty cars on their front lawn, or allowing their grass to get 3' tall.. but as far as antennas, etc.. they have no business telling a homeowner what to do. It's not right that they should be telling people what color they can paint their house, what kind of plants or animals they can or cannot have, etc..

> I know all the key pad mods but any others would be helpful thank you

I have a pre-ban unit from 1994, so I don't have your problem, but I tried the keypad mods once just to see what would happen.

You press #9, and #2 simultaneously first, and then another key (like MANUAL) at random.

One day I was messing around with different combinations and put the unit down to answer a phone call. When I came back, I was astonished to find it scanning from 0.0 in the LED.

It had made it up to 2.5 by the time I pressed the HOLD key to save it, but doing so reset the memory.

I tried to duplicate my actions since, but who knows what I did to clear the frequency programming like that, but at least I know it's possible via keypad.

3074. Help Please Confirm Riverside County EDACS Frequencies

Newsgroup: rec.radio.scanner

Message-ID: <O4Zvb.10334$sb4.9406@newsread2.news.pas.earthlink.net>
Source record: 24527

Hello,

I have the following freq's for the Central/Southwest EDACS system

1 866.2375
2 866.7375
3 867.2375
4 867.7375
5 868.2375
6 866.7875
7 868.7375
8 868.2875

I have programmed these into a BC780 and cannot get the radio to trunk. It did trunk ok about 6 weeks ago (when I last used the radio) but it does not now.

Did the freq's change from what I listed above?

BTW, in the manual mode, I can hear the control channel and users, but unit will not "trunk"

Thanks in advance

Jim

3076. Digital scanners online...Listen now !

Newsgroup: rec.radio.scanner
Date: 2003-11-23 09:51:49 UTC
From: bla <comsecnl@hotmail.com>
Message-ID: <or%vb.4500$%W3.22096@amstwist00>
Source record: 24529

Digital scanners online ...listen now !

Look at this page where i have put some links and information about
digital and live online-scanners.

The first one is a Bearcat BC785D with a BCi25D decoder-card it listens to the all digital Apco trunking system from the New
Hampshire State Police in the USA...since they do'nt have the crypto switched on you can hear all the communications, this will give
you a good impression of what digital sounds like when demodulated with a digital capable scanner.
Sometimes when things go wrong you will hear the digital signal...this is
sometimes caused by a flaw in the scanner and on other moments it is
caused by the Apco radio itself that did'nt succeed in transmitting
correctly (probably out of sync), when this occurs you will hear the
dispatcher say " come again you where digital " this scanner also
sometimes receives non Apco signals (the old fashioned analog)

The second one is a Radio Shack Pro 96 also listening to a mix of
Apco-digital and old fashioned analog .

The 3rd and 4th one is not a scanner but a direct link to the
dispatch-center of the Douglas County police and fire-brigade !
These direct feeds are put online by the the police and fire-brigade
them selves.!....i was very surprised to find out about this !
The reason they are doing this is (as they say)

" to fill the void in scanning by the large public safety migration to digital trunked radio systems. Scanners may be available in
2003 for this technology "

Amazing !!!

This would be a good idea for the UK and other "tetra countries"
think about it ...what would be against it...ofcourse they would only relay the standard and non-confidential communications such as
the main dispatch channel that handles the common daily traffic

Also here things go wrong sometimes and you will hear the wrongly
demodulated signals ...the dispatcher will then ask to repeat the
message because he did'nt receive it correctly

I have sent an email to the sheriff asking this:
....

Dear Sirs,

Could you please answer some questions concerning the internet-feed
of your dispatch communications..your answer would be greatly
appriciated and of interest to many scanner-listeners and government
institutions over here in Europe.

The reason why i ask this is because most European countries have
gone digital this year...and we were very surprised to find out
that some areas in the USA have police and fire departments actually
retransmitting their non-confidential radio-communications over the
internet to satisfy the scanner-listeners.

In personally think it's a good idea and my compliments for the exellent
quality for both the audio and your website.

The questions are :

1) What we hear on the internet is that realtime and not delayed ?
(meaning on purpose so the informaton would be outdated ?)

2) Since when are you doing this ?

3) What are your motivations for doing this

4) Until when are you continuing to retransmit your radio-comms
over the internet ?

That's all ..

On behalf of a large community of scanner-listeners /press-agencies/
various institutions a.s.o.

Thanks in advance !
....

I will let you know his answers (if he agrees with publishing them)
remark: there are more direct feeds like this !

The 5th and last one is also a Bearcat BC250D with Apco card listening
to the digital trunking system ...this one is stereo and has different
channels on the right and left side

Then i have put some links to other non digital online-scanners,
each of them using a different way of showing information about what is
received.

Note) the maximum number of listeners to one feed varies between
4 and 32 so chances are that you have to wait a little (click on the
stream-information to see that info)

The page is here

www.tetrascanner.com

there you go to " online dig scanners "

Enjoy !

By the way if you have a digital (Apco) scanner online or a scanner that shows information on what is received (other then just
aaudio-stream)
please let me know trough the email-adress at my website, thanks !

Tetrascanner

Brenda obviously never had a neighbor whose hobby was arc-welding hot-rod chassis from 6PM till midnight, or who thought having a few roosters was cute, or who installed a couple of 55-gallon drums in their backyard so that they could burn the insulation off of (likely stolen) wire to reclaim the copper, or who painted their house purple and pink, or whose brother & significant other lived in a 5-level treehouse overlooking her back yard for two years. (BTW, Tarzan & Jane actually complained about RFI to their boom box from my all-band vertical!) All these antics happened in the last 20 years to me. However, as I don't appreciate CC&R's, and the Bulgarian border guard mentality of those who enforce them, I try to overlook my neighbors'

eccentricities. And I have no sympathy for anyone who contracts into a CC&R situation, and then expects special dispensation for themselves.

Read the rest of the ruling. It defines that the antenna may be located only in your private area (patio, balcony), not in the public or mutually owned areas (roof, outside wall). This makes it none too helpful for apartment and condo dwellers. Accept it; there are some hobbies that are incompatible with high-density dwellings.

Why, if ham radio is such an importaint part of your life, was it not
included in your plans for a new home?
If I wanted an antenna farm the last place I would look for property would
be in a housing project.
I would be looking at a rual area where there is lots of trees to hang wire
from and lots of ground to plant towers.

What Ed is saying is: If you enjoy a hobby that requires an antenna or anything outside your home forget it, buckle down to raising fish and sell the radio hobby stuff.

That will be the day I turn my home over the HOA Cops, agreement or not. If homeowners keep buckling down to these people next thing you will be paying their mortgage and taxes.

Go Bless America for the freedoms our proud veterans fought for.

Much as I enjoy listening to scanner feeds from across the country, I wish that
people wouldn't do this with digital feeds.

When the department realizes their comms are being broadcast over the Internet
for the world to hear, this provides them with a GREAT incentive to encrypt
their communications. Not too tough with the new digital systems.

Please, "don't give 'em a reason!"

That is what I am in the process of doing now. As I was a ham when I bought my first house and was very much into VHF weak signal work I told the real estate agent the house had to be on a hill and no restrictions. He found me one that is about 200 feet above most of the county. As I would rather play radio than mow the grass, the second requirement was no restrictions on the land.

I am now looking for another house or some land to build on after 25 years in this house. I have turned down several places just because of the height. Turned down one just because it was in a development that met most of the other requirements.

Ya see, Ralph, you got your ducks in a row.
You sat down and thought about what you wanted and went out after it.
Sounds like you got a very good location there.
If you plan to sell your present home I bet there are hams who would like to buy it
.... if you leave the towers up. (grin)

And how would you feel if the condition of the neighbor's house reduced the
value of your house by $30,000?

A homeowner aggress to covenants when they buy the house. They have to sign
the paperwork. If you don't like the terms, look elsewhere.

It is called living in a community, being part of the society. It is done
all the time. You give up the right to drive on the wrong side of the road
when you get your driving privileges.
```

When I bought my current house, I made sure there were no silly antenna provisions. It wasn't hard. Also read the terms carefully, "... on the roof and visible from the front..." says towers are cool, roof mounts are not.

Too many of these tales are 'me, me, me' and don't consider the others involved. Unless you live in an isolated area, you should consider being part of the community and not an irritant to the community.

Jim, The freq. for channel 8 should be 867.2875. I'm not familiar with the bc780 programming. However I do know the freqs need to be in order (the lcn). On the pro95 you can only have one set of freqs per bank that are edacs otherwise it doesnt work right. The freqs you have listed there run off of Elsinore peak. I presume you want to listen to Elsinore, Perris, Temecula, Hemet, Banning, and some Riverside?

I got a lot of good info off of www.trunkedradio.com including the the DEC, AFS and display for the id. Check in the radio database section.

I live in the elsinore area if you would like to contact me use the e-mail address above and I would be more than happy to help.

Long enough to know how to read, Smokey. The issue isn't whether CW gets through better - the issue is whether HF would ever be messed up to the point of not supporting voice on ANY frequency and whether CW would get through if HF was ever indeed messed up THAT much. This was the premise offered by the person I replied to and that premise alone is what I replied to.

> Me thinks this is more an editorial by a guy
> who either hates the code or never could
> cut it.

And I think you're trying to use this nonsense to distract from what was actually said. CW does get through better than voice, but there is no reason to overstate that.

Sitting here in central Taiwan, I bet on my VHF scanner I can hear flights above China talking to controllers, if they are high enough in the air. Frequencies to monitor would be Hong Kong 121.3, Guangzhou=?, Shanghai=?, Xiamen=?, Fuzhou=?. A Google search failed.

I also notice 118-136 Mhz. reception conditions vary from day to night and even hour to hour.

Any chance of military monitoring too?

I agree, Dee. And, in addition, I've never heard of a house where the property value went down, or the property actually failed to sell, solely because of a neighbor's antenna. If anyone is aware of such a situation, I'd certainly like to see some evidence of it.

I found out what the static is......The pro95 doesn't like to use the
priority channel when there is trunk tracking involved. I found this
info on another website. I like to listen to fire dispatch as my
priority but also like to listen to the SO on 800. Would like to find
a way around the static to listen to both.

Don't know what the current draw is on the Pro-95, but I have had up to 18 hours under normal usage, (backlighting off) on the Radio Shack batteries.

Hello everybody,

I am looking for a programming cable for the Yaesu VR500 scanner. If you have the ADMS-3 software to go with it, fine, but no software is fine too.

Please mail me at vr500 at amsat.org when you have a cable for sale.

regards

Marcel

I live across the street from the Canada Customs office building in Fort Erie Ontario Canada and saw a grand Cherokee 4x4 jeep, white with green lettering that said Environment Canada, Wildlife Enforcement on the side of the vehicle, also the officer was wearing a gun. Can anyone tell me what frequencies these officers use, this is the first time I saw one of these officers and their vehicles.

TIA,

Steve

I use 1800mAH NiMh and charge them about once a week. I usually turn it on
about 6 hours a day.

The same type of batteries in my Yupiteru MVT-7100 have to be charged every
other day under the same conditions.

Assuming that it's the same as the PRO-93: 90mA squelched. The manual doesn't say how much it draws to reproduce audio.

Bill Smith <vs4rkcl6ftan95@corp.supernews.com>...

^ I am looking for a 2 way radio for hiking and hunting. I
^ would like one with a 5 mile range.

The problem you have is that handhelds have to transmit with low power (5 watts or less) so that they don't pump an unsafe level of radiation into your face and so that they don't kill the battery the first time you transmit. For most 5 watt handhelds, 5 miles is at the extreme edge of their range.

Your best option in my opinion is to get a handheld that can legally use an external antenna, such as a CB radio or a MURS radio. You might be able to use the stock antenna most of the time and switch to the external antenna only when needed. If you're transmitting with a good external antenna five miles away from someone else they should be able to hear you with their stock antenna, then they can switch to the external antenna only if they can't get back to you.

The CB will require a much longer antenna then the MURS, but this and its higher power (5W as compared to 2W) will give you much more range. A CB handheld is probably also much easier to obtain. Most people complain about the noise on CB but most of that noise is on only the first 23 channels. There are 40 channels.

Frank

> neighborhood.

Amen to that, Deacon Dave. The "lost of property value" is the most touted reason for opposition to antennas, but absolutely no evidence is ever presented to support that claim. In the end, I personally think all this is the result of cable companies pushing for the removal of television antennas in exchange for reduced rates on the installation of cable wiring in new housing developments. Since developers couldn't really justify a restriction on television antennas if radio antennas were installed in the area, they adopted rules to eliminate all antennas instead.

This is precisely the reason why the federal preemption against TV antenna restrictions was enacted. There was proven to be widespread collusion of cable TV companies and developers across the country. The cable companies would prewire the developments for little or no charge. In exchange, the developers were required to restrict the installation of antennas or satellite dishes. Illegal restraint-of-trade.

You forgot about skip. This phenomenon affects CB almost daily, but hardly
ever propagates as high as 151-154Mhz (MURS frequencies.)

If the skip is in, you'll be lucky to be heard 1/2 mile away on a 5-watt CB
handheld.

The ceramic filters are in the IF stage- the IM occurs in the RF stage, so
changing the ceramic filter will not help- the IM is already there.

See: http://www.grove-ent.com/filters.html
for a solution.

Apparently you didn't read the page to which you referred in your message. OTARD covers video receiving antennas, like those from DirecTV or Dish Network. It does NOT cover "big, honking" antennas such as those for amateur radio. To quote from the FCC's website:

-=-=-

The rule applies to the following types of video antennas:

(1) A "dish" antenna that is one meter (39.37") or less in diameter (or any size dish if located in Alaska) and is designed to receive direct broadcast satellite service, including direct-to-home satellite service, or to receive or transmit fixed wireless signals via satellite.

(2) An antenna that is one meter or less in diameter or diagonal measurement and is designed to receive video programming services via MMDS (wireless cable) or to receive or transmit fixed wireless signals

other than via satellite.

(3) An antenna that is designed to receive local television broadcast signals. Masts higher than 12 feet above the roofline may be subject to local permitting requirements.

In addition, antennas covered by the rule may be mounted on "masts" to reach the height needed to receive or transmit an acceptable quality signal (e.g. maintain line-of-sight contact with the transmitter or view the satellite). Masts higher than 12 feet above the roofline may be subject to local permitting requirements for safety purposes. Further, masts that extend beyond an exclusive use area may not be covered by this rule.

-=-=-

For that, you have to look to PRB-1, but the FCC says that does not apply to deed restrictions (CC&Rs). There is legislation before Congress at present to extend PRB-1's authority to CC&Rs as well as local governments, but it has yet to be passed by Congress and be signed into law by the President.

I doubt very seriously that you can convince any HOA that your tri-bander beam is needed for receiving TV signals. A better, and more honest, approach would be to explain to them how actively involved you are with your local ARES or RACES group -- you ARE, aren't you? -- and how vital a resource you can be if you have the necessary capabilities to provide communications in the event of an emergency. Also:

- make your request reasonable
- offer to show them your station at home
- enlighten them as to what it is that ham radio is all about
- ensure they understand the difference between ham radio and CB
- assure them that they won't be opening up the neighborhood to complaints about interference
- don't plan on running a kilowatt linear, as you will be guaranteed to cause at least some interference with that much wattage (with buildings as close to one another as you have in most condo associations, you'll find that anything more than 250 watts is going to guarantee some complaints)

You know, the usual stuff. Right now I have a very agreeable relationship with my HOA at home. I live in a condo in Fountain Valley, CA. Our CC&Rs allow for an antenna mast attached to the chimney, not more than eight feet above the highest point of the house. I can use that to support the center of my G5RV when I can get up there to remount it, plus I will be putting a discone atop that mast for VHF/UHF communications and to feed signals to my scanner. I've had a shorty G5RV up at home for the past couple of years, not mounted in the optimum configuration but it does a fair job -- and I've never had a TVI/RFI complaint in all that time. Using QRP power levels helps, of course, but even with 100 watts I didn't have any problems.

There's one review in the December 2003 issue of Monitoring Times. And
unfortunately, it omits the one band that I really need in a scanner:
the UHF military aircraft band at 225-400 MHz...!

I mean, what is the PROBLEM here? How hard is it to include that in a
scanner? Especially a hand-held version, which is what one would
naturally want to take along to an AIR SHOW?

One thing to note: if you are on a cruise which will take you to other
countries (unlike the cruises up in Alaska), you may want to check first
before you take your scanner OFF the ship at any of the stops along the
way. Some countries are a little picky about that sort of thing....

> this past month in Southern New Hampshire.

You may also want to plug 143.9 MHz in -- that's the input frequency for the 148.15 repeater output. I don't remember the other VHF input, but it's pretty close to 143.9. MARS repeaters use frequencies very close to these, also.

Also, if I remember correctly, 123.1 is a common frequency in the VHF aircraft band for "tactical" use by CAP aircraft and for air-to-ground communications. And of course, ALWAYS keep 121.5 programmed in, along with 243.0 if your scanner covers that band -- those are the VHF and UHF "GUARD" frequencies for aircraft emergency communications.

Long, long ago, CAP also used 26.620 MHz. This was made available by using old crystal-controlled CB radios and putting the channel 10 CB crystals in backwards (put the Rx crystal in the Tx slot, and vice versa). I believe this frequency has long since been dis-used, with the advent of less expensive VHF FM gear and the passing of crystal-controlled CB equipment into the sands of time.

Good point about the FRS frequencies. I'll remember that tip, thanks.

Frank,

To me that means that I cannot monitor a trunked Frequency as Primary. This seems to make sense as you are really letting the trunked system pick the frequency. However I monitor the weather as Primary, and when I monitor MOT systems like here at home it is no problem. However, when I drive up the road into an EDACS area the static after each transmission is unbearable. When I turn of the Primary monitoring the static stops. Its an easy fix.

Tim

CAP uses 100.0 hz PL as a nationwide standard. All CAP repeaters have to respond to this tone but it is only to be used by low power portables (less than 6 watts with internal antennas) and when out of your home area. Each repeater also has a normal tone (one of the 32 standard PL tones) which is what you will normally hear. Some CAP repeaters do not tranmsit PL tone but do require it before repeating.

CAP uses 148.1375 as a Ground channel and 149.5375 as Air-Ground. Both of these are supposed to transmit 100.0 hz also but some radios may not be programmed correctly.

CAP still has 26.620 but it is little used. They also have several HF freqs from 2 to 14 MHz and these are used for long range communications in USB.

Finally, CAP also has some "inter-squad" radios. These are basically the same as FRS except they are on federal freqs right around 400 MHz.

Oh yeah, CAP also operates practice ELTs on 121.775 for training.

Dear HOA's COPS,

NO, it's not time to move. It's time to get sneaky and stealthy with your antennas, find me if you can. But there isn't a darn thing you can do about it as long as it's not in the public's eye. By the way, my Dish Networks dish is going up. Thank you FCC for making them LEGAL. But is was going up regardless, just like the others have in this housing plan with such antenna restrictions. HOA's that restricted antennas made cable the only way your could receive any tv stations. That was illegal from the start.

As I have said, I am moving into such a housing plan. "WE" don't own a lexus or similar vehicle and I haven't seen one in the plan. The majority of people there seem to be down to earth everyday nice people, until you get to the HOA Cops, which every housing plan with HOA restrictions of any kind has.

Normal people who reside in a nice house isn't going to paint their house some weird color, park junk vehicles, let their grass turn to weed or put up gigantic towers and antennas, etc..

By the way, I haven't signed any such agreement when I bought the house. I do know that such HOA "BS" does exist just to please the people residing there that doesn't trust their neighbors. They are the ones that should move. "TRUST" is the word. I did some checking and the first house sold in the plan was to a nice family (mechanic) with two children. He/they have an immaculate looking yard and house. He is a scanner enthusiast and has his antennas located in his attic, aside from his dish which is located on the back of roof.

Where there's a will there is a way.

"God Bless America" for the freedoms we still have.

Have a positive day.

You don't get it. In many areas, ALL desirable properties are in deed
restricted developments. The only alternative is to live in the ghetto with
all the pimps, gang bangers, drug dealers, and other criminals.

Not much of a "choice", is it?

A very good example of the viewpoint of a rogue who tries to cloak her improprieties in the blood of patriots and the silk of religion.

The fundamental civility of our society is based on our ability to enter into contracts. We promise something and the other party promises something. A contract is simply a permanent record of the defined promises. You are expected to uphold your promises.

What I am saying is quite simple; if you don't like the terms of a contract, then don't enter into it.

OK. I don't listen to my CB often, only during emergencies, but when I do I usually scan all 40 channels and I only notice the noise on the old 23. I assumed that this is because the old 23 channel radios were more easily modified than the newer radios.

That is right .... put up the bigest antenna as high as you can get it.
If it stays up more than 6 months then it was not big or high enough!

The 225-400 MHz band can be opened up on the PRO-96. It has excellent sensitivity on those frequencies. I have owned the PRO-96 for two months now and I would put it into the same category as the Radio Shack PRO-2006 and PRO-43. Excellent scanners that will become "classics" to scanner buffs.

The Win96 computer control program allows you to open up all of these frequencies. If you go to the Win96 website, you can see the results of sensitivity tests at all of these frequencies. The address is:

http://www.starrsoft.com/software/win96/FreqTest.asp

You're a little out of date, Frank. Almost nobody uses modified CB radios anymore. Instead, most CB'ers running illegal equipment today use so-called "imported radios" - radios very easily modified for out of band use.

Dennis, either you don't live in a town like this or CC&Rs simply haven't reached your community yet. The major industry in this town is tourism. Because of that, any house built within the last twenty years has a CC&R antenna restriction. Even worse, real estate agencies, hoping to cash in on the tourist trade, have purchased most of the older properties, adding CC&Rs antenna restrictions to those. At this point, unless one is willing to move twenty to thirty miles outside the area, CC&Rs antenna restrictions have become an almost inescapable fact of life. Perhaps you consider that acceptable. However, I don't happen to think people should have to move miles away from work, schools, or shopping, just to have an antenna. And, indeed, many people are not going to do so - which means they will simply have to give up radio as a hobby or recreation instead.

Obviously CC&R antenna restrictions haven't reached your community yet. We're not just talking about gated communities or luxury properties. In this area, these restrictions can be found on even the cheapest properties.

Perhaps I did respond defensively, but your "read the rest of the ruling" comment suggested there was something in the rest of the ruling which should have my attention (a conflict with what I wrote, perhaps). But, as stated, I saw no conflict (or anything else that would specifically modify what I wrote). Regardless, no big deal - a simple misunderstanding. It happens.

I work as a Title Examiner, so this is right up my alley.
Many, many homeowners take ownership of a property
in "fee simple, subject to reservations, easements, and
covenants of record, if any," and don't inform themselves
about what those reservations (read: Restrictive Covenants)
really are. They're just words on a piece of paper, and
these contracturally obligating encumbrances are effectuated
by conveyance, in other words, they have the power of the
law, even though they don't appear on the deed.

In other words, you have two pieces of paper: The deed,
which makes a glancing reference to restrictions "if any," and
the actual restrictions, which are filed with the County Recorder
or Registrar of Titles. More people than you can imagine are getting
hoodwinked, Dennis. Your thesis that folks are signing a contract
which clearly states the terms of these restrictive covenants just
isn't so....and I have underwritten title insurance in 50 states,
Guam, the USVI and Puerto Rico for years. I have *seldom*
seen a deed which clearly delineates and describes restrictive
covenants. I'd say it happens one in a thousand times, regardless
of the location. Your point is simply not valid.

73,

Steve Lawrence
Burnsville, MN

Do you not sign a document saying you agrree to abide by the terms of a covenant?

If so, then isn't it your responsibility to read what you are signing and the document it refers to?

While the terms of the covenant may not be in the deed, I have always reviewed the covenant before buying a house. Being lazy is different from getting hoodwinked.

People should be responsible for their actions. If they are agreeing to something, it is their responsibility to understand the terms. All I had to do was ask to see the covenant. I also put a condition on the earnest money

agreement requiring my acceptance of the covenants.

It isn't difficult to look out for yourself.

You just gota decide what is important in your life and act accordingly.

Why do so many people spend their health making money only to spend the money to try and regain their health.

If I thought it was a big thing that I had to have a radio antenna over my house then I would never sign or agree not to have one. If I did agree not to have one then I would not put one up or whine and cry later about not having the right to have an antenna. It cant be stated any simpler than that!

On the other hand if you live in California then all bets are off and anything goofy and crazy will prevail.

The great American spoof is "home ownership".
If you ever think you really "own" your home just stop paying money for it and see what happens!

Heaven forbid you should be forced to give something up.
Personally I think that property restrictions of any type are unconstitional as applied against the "right to pursuit of happiness".

If that is the case then you sir are not doing your job representing the public.
If you know there is someing shady going on you are obgliated to speak out in defense of the public or let someone else that will have the job .

I am no lawyer but I dont see how a person can be held to a contract that has no meaning.

Willee

Please list the article and paragraph in the Constitution that says anything about the "right to pursuit of happiness." It isn't there. You are confusing the Declaration of Independence with the Constitution.

Besides just because you have the "right to pursue happiness" doesn't mean you are going to achieve it.

A GMRS radio may fit the bill.

Do a search under "GMRS" to learn about this service, it is a licensed service..only about $60.00 for the whole family.

If you do go GMRS, avoid the K-Mart type radios in bubble packs, go professional grade...costs about $100+ each handheld but the money is well spent.

That depends on the frequency range you will monitor.

Do a google search on scanner radio antennas, check into Police Call and Ham sites to learn about antennas.

As a general rule, an outside antenna always works better than the one that came with the scanner.

There is no one "do it all" antenna, some come close but if you stick to say 150Mhz range, get one tuned for that range.

KU4PT and I have been a ham for over 30 years.

I don't have a gigantic tower beacuse I am on a small lot and also don't have the money to put up one like I would like to have. I do have a 40 foot tower and also a shorter ,maybe about 12 ot 15 feet, with my OSCAR antennas on them. I just installed two more 20 feet towers with a 10 foot pipe on them about 140 feet apart to hold up an 80 meter dipole. No trees so to speak of in the yard.

this is a great stubby antenna with an SMA connector.
144/430/1200 + wide band receive includes pouch it came in.
"mint" condition.
worked great on my vx-5r which i don't own anymore,
that's why i'm selling it.

this is small so it can be mailed in the regular mail envelope.

$15.00
thanks
Bob

Looking at his Austin, Texas newsgroup header, he's probably making a point about the extremely high property taxes they have there. They don't have a state income tax in Texas, but they really sock it to property owners.

Even when your mortgage is paid off, those taxes will continue (and probably increase).

You people amaze me. If you don't like covenants, then don't move into the neighborhood. The whole reason for the rules are to keep everything in check. Something tells me that neither of you would wants someone putting up some rusted out, 1970s RV and using it as a shed if the rules made that 'illegal'

There are many places/homes in certain areas in and around Indy that do not have restrictions. The problem, everyone seems to want to live 5 miles from work, in a neighborhood they want to live in, in a home style they just have to have, etc etc. Shelby county is just to the southeast of Indy. It's the most rural county around Indy. Many people getting 3-5 acre pieces of land and building nice homes on them. They are free to do as they wish. Older homes with 1 acre of land are going for $100 to $120K. There is almost always a choice, even if it means moving to a new state/city. Fact is many of my friends want to live a certain way. If we allow the hams or SW radio folks to violate the rules, then why the hell should I get blasted for putting up a 1992 Honda on blocks and leave it sit on the driveway for months? For every violation, the violator has the same story: "I work so much I can't work on my car, so it has to sit for a few months. The only other place with no rules is the ghetto, I should have to live there just to do my own repair work."

And why should people who don't want antennas surround their house have to move miles away? Why should people who want to sit 3 cars on blocks have to move miles away? Let's just have a free for all and forget the rules. That way I can see just how tall some wild weeds can grow in my front yard. I hope your not looking to move, interested buyers may not like my 'urban jungle'. But like you say, why should I have to move miles away from everything to have my own little wild growth forest?

Plenty of homes are affordable, but like someone here said something like: "Why should people have to live miles from shopping, schools, etc." I have a cousin who is married and a best friend who is married. Both paid $140K for their homes. One group purchased a home in the 'elite' northside of Indy, the others on the eastside. Both live in the burb counties. Both have great public schools. The eastside doesn't have the restaurants, shopping, etc. You have to drive 20 miles to get to that. The difference: One has a very small yard and lives in a vinyl village. The other has almost an acre and all brick. One lives 5 miles from work, the other lives 10 and 20 (wife and husband distances). One pays less property tax. It's all about choices. If you just have to live where the stores, restaurants, super rich, etc live and you buy a home that has a mortgage that makes you live pay check to pay check...yea, you won't have much. If you make due with a home built in 1950 or earlier that is in good shape (oh the horror of not having a 'new' home that some of my friends would fear), you won't be hurting. I plan on getting a home in 2-3 months. I have seen some decent homes for $85-$90K. They are 4-6 miles from half million dollar homes. 2 miles from schools and shopping. Their downside: They are 40 some years old and in good shape. Now in places like California---get out before the great burn off starts.

Then why the hell is it 'right' that they tell your neighbor they can't have
12 rusty cars in their yard? If you want to live without rules, get an
older farm house or something. Don't move into a neighborhood and then
complain about the rules you disagree with.

I love that! However, when talking about property restrictions...we are talking more of capitalism. No one is forced to make people live in this area. Just their desire to be in a certain spot for whatever reason (schools, 3 miles from work, the elite live in the county, etc etc).

But if you were selling your home and I had a 1980 rusted Honda on blocks plus a used beer keg as a 'bird bath', do you honestly think that everyone that looked at your home wouldn't mind me as your neighbor? That is the whole point of covenants. Something that protects me when I want to sell. I could careless about my property value going up, as long as I could break even it would be better than renting. However, even if your price is low...having the wrong neighbor could mean 3 people that would have bought will change their mind. Now I am running out of time, dipping into my cash reserve, etc. trying to keep my old home and pay for a 6 month lease in my new city where I work. I personally will not live with covenants. City ordinances are bad enough!!! My goal is to live in the city I work and get a home for $90K. Save, save, and save some more until I can get a home not in a neighborhood that won't be annexed for a while. If it's annexed, I think it will be time to move even further north. I would rather have to buy Hondas that will last 200K miles if it means living free.

Hello All.
I'm new to radio scanners and just bought a RS pro2040 scanner but am still awaiting delivery.
I was wondering if you can monitor telephones on this scanner? Cell? Cordless?
What else can this model scanner do?

Thanks
Phil

By the way, what is trunking?

As has been pointed out almost innumerable times already. Did you just
discover this thread? <grin>

Oh well, I haven't put my 2 cents in yet, so I might as well do it
now.

While I kind of agree with the "...if you dont think you like it, then
don't sign it" philosophy, I think the restrictions are often carried
beyond the realm of common sense. A fairly inconspicous rooftop
antenna, a window in your grage, or an untattered flag on your porch
is a far cry from putting a rusted out RV on your front lawn for
storage shed, allowing your lawn to grow high enough to hide in, or
painting your house "Shocking Pink with Turquoise Trim." <g> Of
course, I said a fairly inconspicous rooftop antenna, *not* a 50'
backyard tower with an monster multiband Yagi...

Then again, it's not the actual restrictive covenants themselves that
I'm against. The fascist attitudes of many HOA board members alone
makes me refuse to even consider buying a property in such a
community. Not to mention the the "stuck-up" antisocial mentality of
many of the homeowners who would be my neighbors.

I don't need restrictive covenants to keep neighbors from becoming
nuisances, either. There are nearly always local laws and ordinances
dealing with noise, nuisance and safety and health, and agencies that
do enforce them.

You are perfectly welcome to closed-communities, HOA's and
restrictions on what you can do with what you own. I'm satisfied with
democracy and the spirit of *responsible freedom* that makes America
great. Just keep your HOA's out of my *free* neighborhood.

So punish your friendly neighbors because some panel of 5 or so people are dicks? When you come to my door after causing your interference to borrow a tool, you'll get a big "FUCK OFF COCK SUCKER!!" Being an asshole to people who didn't have anything to do with some busy body two streets over shouldn't get treated like this. Anyone who does this to me will just mean constant complaints to the FCC. The immediate cessation of my kids being able to even look at your kids. Not helping you in any way shape or form. The list goes on and on. If anyone here has a ham who acts like this, form a "Fuck you!" circle of like neighbors (those of us who didn't complain, etc about the tower) and treat the ham like the ass he/she is. Then in 10 years when the for sale sign goes up, remember to kindly give the finger to anyone stopping by to look at the house. Also it might be time to start the junk car collection. Keep proof that the home owners association allows for rules to be bent. Then pool money for a lawyer saying that since they allow for x, y, and z they damn sure are going to allow for a, b, and c.

"Wayne Green" is what you do when you have to
go to the ER at 9 PM and wait in line 2 hours in
a chair to be seen by Dr. WhatsaMatter Fo Uinstien....

"George Noorey" is the nic for George the X-Ray
Tech who blasts you with the rads from the Crooke's
Tube at 120Kv from behind a lead screen. (..rey-ray...get it?)

(Being a paid EMT myself I can appreciate the story that
follows, lifted from my other favorite Ng of alt .tasteless
Medical humor is always entertaining. Enjoy the read
while waiting 4 tonight's show. Wayne G zbtw is a rather
amusing...if not eccentric guest. A good listen as I get to
run night duty crew as I type this evening)

Nomination: AT Real Life - "Screaming Nutsack Agony" by Coinneach
Fitzpatrick

Firstly, I must apologize for one thing. I did not receive the
original post by Coinneach Fitzpatrick on my news server, and Google
did not archive it. I did however save the post made by a nameless
retard who whose to quote the entire article and add one line of
(stupid) text at the end. That has been edited out. It's the only way
I would have seen the article at all.

Posted by Coinneach Fitzpatrick Saturday, October 25

Subject: Re: Screaming nutsack agony - long and pointless

<leering@yermom.com> wrote in message news:18tjpvsd5699rkk6fskarr151tpef5tg26@4ax.com... For the edification of all, a description of my recent experience with epididymitis.

First, the background. I was working at an indescribably horrible, stressful job, made worse by the fact that boss gave not one steaming shite about the customers. Or his employees' health, as it turned out. The choad came in to work with some contagious disease, despite the fact that he's (1) salaried and (b) insured, whereas the rest of us were neither.

Of course, stress weakens one's immune response, and I'd been more stressed than ever before due to the shitty pay, hours, and working conditions. So, when I started pissing laser beams 2 days later, I wasn't exactly surprised. Unable to afford a doc, I took refuge in cranberry juice. It helped, briefly, but the infection recurred. And recurred again. And again. And again.

Then it got ambitious. In the meantime, I had quit my job.

Early in the morning of 6 October, I woke up in a cold sweat, with the feeling that things were not as they should be down in my dangly bits. I gently prodded about, and encountered my left testicle, which instantly and savagely attacked my central nervous system.

15 minutes later, I managed to uncurl from the defensive fetal posture enough to turn on the bedside lamp. The swimmer factory had ballooned to 4 times its normal size (that is, twice as long, twice as thick), and was rock hard.

Now, about the pain: imagine having your sack ripped open with a carrot peeler, stuffed to the bursting point with white-hot coals, stapled back together, then thwacked with a sledgehammer. Feel free to shudder and cringe as you see fit. Or jerk off in ecstacy. Whichever.

The next 5 days are still sort of blurry. All I can really remember is endless repetitions of cranberry juice, hot baths, and ice packs, with occasional crawls to the toilet for more frickin' laser beams shooting out of my frickin' penis, along with shreds of matter about which I don't want to ponder too deeply.

Finally, the morning of the 11th, things came to a head (PDI). Stagger to the bathroom with a painfully full bladder, gingerly drop my briefs, aim, and...

squirt

Not good.

I don't have a car, just a motorcycle. The very thought of climbing on the beast made me all twitchy and sweaty; shit, I couldn't even walk without grinding my teeth. So, it came down to a choice between going

out back with the shotgun, or calling the medics. Not trusting my aim, and having other obligations, I made the call.

10 minutes later, the first crew arrived. I had managed to put on a pair of swim trunks and a t-shirt, and flip-flops. Add to this the fact that I hadn't shaved in nearly a week. Must've been an amusing sight. The medics wired me up, stuck an IV in me (my first ever, weeee!), and asked exactly what was going on. When I described the symptoms, the chief shook his head and said, "Man, you don't want to wait on something like that. You gotta look after the boys!" We talked about the possibility of torsion, and decided that I needed to go to hospital RFN. (right f-n now)

Side note: ambulances do not have cushy, comfy rides. I felt every crack in the pavement. The EMTs, to their credit, did a good job once we got to the Halls Of Screaming Torment, getting me up to 1st on triage. "It's a guy thing," they told the triage nurse. Of course we had arrived right at shift change, so things slowed down quite a bit. I went through the paperwork bullshite, embarassedly explaining that I was flat broke and had no insurance "Don't worry about that," they said. Ha.

Whilst waiting to be poked and prodded, I wondered about the large proportion of old creepers hanging about. I overheard the resident discussing one's stroke symptoms, a few chest pains, and a few diff breathers. And I wondered... why fucking bother, when they'll be dead within a year anyway?

Eventually, someone came to me with a cup and pointed me to the bathroom. Sweet relief at last, I offloaded about a gallon of dark brownish-orange urine. When I handed the cup to the tech, he did a classic double-take and said, "Thanks, Mr Fitzpatrick, go have a seat and we'll get some water to you."

That was the best water I've ever tasted. Being on the edge of collapse due to dehydration may have had something to do with it.

Some hazy time later, a spectacularly hot transport chick came up and wheeled me back to a bed. Of course, the first really fine woman I've seen in this festering shite-hole of a state (Arizona), and I'm looking like a Skid Row reject...

Then the doc came by, introduced himself, apologized for the delay, and asked for a quick visual. I showed, he blinked and nodded, and said he'd be right back. Then the nurz strolled in and asked how the pain rated. I said "If 1 is a mosquito bite, and 10 is grabbing a butcher knife to cut the damn thing off, we're at about 8." She said she'd get me a painkiller and anti-nausea med.

ObDefinitelyNotT: Dilaudid. Without a doubt, that is the best high I've ever had. It wasn't a numb or detached feeling at all, which I thought was strange, as it's a form of morphine. As the wondrous elixir flowed up my arm and out from my chest, it was like every bit

of my body suddenly woke up, stretched, and said good morning. Then the wave hit the affected area, and the pain just... went away. It felt like a warm bath of anaesthetic oil over all the nerve endings. Pure bliss. I asked the nurz if I could get a siz-pack of that to go. She laughed and comfirmed my opinion. Good shit. Then came the anti-nausea stuff. Very thoughtful, as one of the side effects of testicular pain is nausea.

Then the doc came back, and said he wanted an ultrasound. I've seen that done, and it looked very pressure-ific. I must have turned pale, for he said they'd give me another dose of Dilaudid if I needed it afterward.

I needed it afterward.

The ultrasound tech was a good guy, very understanding and patient, but there's only so much he can do without pressing. Damn him, he kept cracking jokes, which made me laugh, which made me hurt... oh well.

The blood flow was fine, so no torsion. At that point, I was actually hoping the blasted thing was dead, so they would just take it out and let me recover. No such luck.

More Dilaudid, a diagnosis of acute (no shit) epididymitis, and 2 prescriptions later, I was on my feet, 4 miles from home, with no money, and no one to call for a pickup.

Did I mention the flip-flops?

That's how I got home. If not for the drugs, I never would have made it.

So. 2 hours later, I staggered back into my house, grabbed the checkbook, put on my sneakers, and staggered over to CVS, which by some minor miracle is right next door. Picked up my prescriptions for Levaquin and Vicodin, got home and put my entire Monty Python's Flying Circus DVD set up on eBay to cover the check, and sacked out.

The Vicodin didn't do shite for the pain, BTW. I'd used it before, to good effect, but not this time.

1 week later, the infection was gone, but the swelling remains to this day. It's gone down some, but riding the motosickle is still uncomfortable. Advil takes care of that. According to everything I've read, it could be *months* before it's back to normal. I oughta take a pic and put it up on abpt.

Let this tale be a warning to ye gents: when something's amiss Down There, FIX IT. Or suffer untold agony and embarrassment, if that's your thing. Cheers, Coinneach Fitzpatrick

---

ObT: I've been eating nothing but vindaloo curries lately, and consequently shitting napalm and farting mustard gas. My ass feels like a White Sands test range, complete with little pools of glass and chattering Geiger counters. With a lifetime to harden themselves against this sort of pain, I'm surprised that the Indians haven't killed us all. Once you get used to squirting live thermite out your bunghole, I can't imagine that facing bullets is particularly daunting.

Cheers, Matt

Hehehe... You never truly own a home. Even when the mortgage is
finally paid off, all you've done is paid off the bank. Now that you
officially "own" your home, just try not paying the taxes, insurance
or garbage pickup / snowplowing fees. See how long you own it for...
<g>

BTW, I just love those artificial municipal fees... I was forced to
pay $150 per year for snow plowing fees in a community where it snowed
maybe once or twice a year and usually not more than an inch at most!
Most years they never plowed a single road. My particular street
NEVER saw a snow plow in the 20 years my family lived there.

At least there wasn't an HOA or covenants to deal with. I could have
a rooftop antenna. In fact even after several neighbors put up
antennas (total: 2 CB'ers, several houses with vhf/uhf TV antennas,
and myself with a several vhf/uhf Yagi's and a SWL random-wire running
the length of the roof), our assessments continued to rise, not go
down. My chain-link fence actually made my home more valuable when I
sold it a decade ago, though that was probably just a quirk of the
buyer. <g>

I agree with your assessment of HOAs. They are usually worse that the government with all their rules and regulations. However, I also find it sickening that grown adults will enter into a contract and then whine about not being able to violate the contract. With covenants, the rules are not weighted. They are all equal. If someone put up an antenna and I or someone else complained and they made an 'exception', then I would quit cutting my grass and get a lawyer (if I had too) for my exception. I think many of these problems come from areas where housing costs to damn much. I live in the Indy area. Rural homes can be had for $100K for decent to $140K and you can get a lot of that. The only thing is that you will have to drive 10 miles to a mall and restaurants. That is why a lot of people complain because they want to have their cake and eat it too. If every addition in the yuppie suburban county near 'x' city has covenants....DO NOT LIVE THERE!! If ham and short-wave is that important in your life, get a Honda and just put up with the extra 10 miles you have to drive to work. I have been living semi-rural for all my life. This area is getting more and more homes in. In my addition, an antenna would look stupid. I would put cars on bricks just to get back at some idiot who did that (though I might wait until the for sale sign goes up!!!). However, 1/4 mile away on some of the older farm homes...antennas would be bad at all.

As I have said before: if you don't want to live in a crappy neiborhood,
don't look for a house in a slum. I have never lived in a house with an HOA
and I have never had the problem. Then again, I have never lived in a slum
either.

I take it that you don't have anti-antenna covenants in your
neighborhood. Why don't you simply move to a closed-gate community
where the antennas you don't like are restricted instead of being an a
total jerkazoid?

You want *other* people to abide by rules set by their communities but
you don't seem to be able to live even with your own rules. Damn
hypocrite, I say!

There are no rules. If someone puts up a huge antenna in our neighborhood....fine. I will then put up something that looks just as stupid. Many of the people in my area who have huge antennas usually live more rural and don't live in an addition. I am also only talking about these super high antennas. A very small antenna wouldn't bother me too much. Thing is that if I decided to make my yard an antenna field and put about 3-4 high antennas on my roof to cover everything, then ham wouldn't care. However, something tells me that if he/she had to sell their home they would take down their antenna first and ask me to do the same if a realtor said my antennas were driving potential buyers away. That's the hypocrisy I don't like.

Steve:

When buying a property, there's enough imaginatively named fees to gag Godzilla! So what the heck does a Title Examiner do when he sees a Title that makes "glancing references" to "reservations, easements and covenants of record, if any." Don't you jump up and down, and scream something like "This document ain't complete; take it back and do it over till you can fully describe the property being sold."

From your description, sounds like you think a half-ass, boiler-plate description is acceptable, and you sign on your line and collect your fee. And, from the sales agreements that I've seen, you can never be held liable, since the buyer has usually been forced to buy insurance against the possibility (probability?) that some professional middleman was operating in a haze of indifference.

Could it be that the dark secret is, if every restriction and easement and covenant were fully described, that few buyers would ever go through with a deal? Whew, I'm glad that MY business doesn't depend on hoodwinking MY customers!

I got loads of copied software on my computer, They should not ask
ridiculous prices for bug ridden crap anyway, so they only have themselves
to blame, Have you tried out arc8200, They should pay US for using it.
If anyone wants a decent freeware/Beta program for the AR-8200 which WILL
run on XP
try ....Greenlight.....
http://home.no.net/helgeww/GreenLight/
Now that IS good, in its infancy mind you, but it is very good.
I can't wait to get the finished product, Now that one I WOULD pay for.
Quartz
Yes, I Know, I top-posted , sorry.

he wasn't asking to swap....just for someone to send it to him

I have used ARC8200 for years, if your's doesn't work did you tell
Gommet the problem??

I tried greenlight.....I did some beta testing on it, nothing great
there

the best software I have ever used for the 8200 is Bonito RadioCom 4 and
5
you can't program the freq banks with it but it will do all the rest,
better and bug free

so what have ya got to swap??
email me

keep in mind Mr Pack that the respondents to
this thread are comming from ham radio related
ng's. Ever been to a hamfest? Sorta like going to
an auto junkyard. Overweight, smelly old white
men walking around smoking cigars with 4 day old
stubble on their chins and wearing clothes that
were last in style in 1978. You can't blame them
for it going right-over-their-heads as all that matters
to them is their stupid ham radio and the closest
auto route to the Burger King or Mc Donalds.
Only people who are worse than them are the
model train scow crowd who are just as bad
and also in a class all their own.

I'm sure the mix-up was one of those heat of the moment things (perhaps someone trying a little too hard). Regardless, it was pretty darn funny at the moment. And I'm sure all involved got ribbed about it by other officers afterwards.

Wouldn't it be great if JUST ONCE he would just stop and say, "What a load of crap!"

I doubt we'll ever hear it, though.

I think Noory must be worried that if he challenges anyone that he will have a difficult time booking guests for the show. After all, like you say -- he is no Art Bell.

Hey, cops are humans, they can and do make mistakes like the rest of us. Our crew here does a hell of a good job, but believe me, when one of them screws up such as mentioned above, they don't live it down. So, they catch it from within... And ya know, we all get a laugh out of it. They drop by the fire station often and we all know about their escapades. If we didn't hear about it on the scanner, we usually hear it from one of them. Of course, if we screw up, they get on us as well. WE ALL MAKE MISTAKES. As long as it doesn't cost anyone a life, limb or property, nothing or at least not much is lost. You learn from your mistakes and move on. That is why ALL departments be they Police, Fire, EMS - SHOULD - critique their calls when over. TO LEARN from any mistakes made. G.W.

I have a BC250D scanner with P25 card for sale $475 (OBO) shipped CONUS.
I would also consider trades for decent HF rigs like a IC746 or 761.
Cash differneces in trades will be negotiated...

The scanner comes with programming cable, charger, DC cord and a couple
antennas.

You've got that right. A friend was even show a list of restrictions when he purchased a house, only to be handed another list as he was moving in (from the Homeowners Association). Most of the restrictions were the same, but several more had been added. When he talked to his lawyer, he was told the wording of the sale made those restrictions enforceable.

On a side note, something similar could be said about related city or town taxes. Many years ago, the city here started collecting taxes to subsidize curb-side garbage pick-up. Those taxes were raised many times over the years. A few years ago, the city decided to end that service, requiring residents who want garbage pick-up to pay for it themselves. Of course, as you can guess, the taxes supporting that were never stopped. We're still paying those same taxes today, but the money is simply being used for something else.

Many additions in my area are not in the city. The only county requirement is to cut your yard one time a year. No county rule about having junk cars in your driveway either. CC&R is what keeps the new neighborhoods have nice yards. We have one trashy family that lived in our addition that would never cut their grass and had junk cars just sitting. That is just as worse as those people who put up their ugly antennas. If I move into a neighborhood where antennas are banned and my neighbor uses a new law to put one up, mine will go up as soon as he takes his down and his 4-sale sign goes up. Hope it doesn't cause some possible buyer to reconsider due to the stupid looking antenna towering above in the neighbors yard. Funny thing is that if a few people said why they didn't buy, I wonder if this die hard ham would have the balls to actually ask me to take it down until he sold the home. I think such a person would...they usually are only out for themselves.

Many additions in my area are not in the city. The only county requirement is to cut your yard one time a year. No county rule about having junk cars in your driveway either. CC&R is what keeps the new neighborhoods have nice yards. We have one trashy family that lived in our addition that would never cut their grass and had junk cars just sitting. That is just as worse as those people who put up their ugly antennas. If I move into a neighborhood where antennas are banned and my neighbor uses a new law to put one up, mine will go up as soon as he takes his down and his 4-sale sign goes up. Hope it doesn't cause some possible buyer to reconsider due to the stupid looking antenna towering above in the neighbors yard. Funny thing is that if a few people said why they didn't buy, I wonder if this die hard ham would have the balls to actually ask me to take it down until he sold the home. I think such a person would...they usually are only out for themselves.

Probably the best all-around analog handheld out there right now.

Hurry down to your neighborhood Radio Shack, avoid the droid when he tries to pitch cell and Direct TV, and grab an early present for yourself this season!

I shot this from my neighbor's back yard on the 13th of this month
(Nov 2003)
http://www.rogerhalstead.com/ham_files/Tower30.htm

I had to get a building permit for a tower this size and it had to
conform to the proper engineering standards. (the guy anchors weigh
17,000# each. The lower guys are 4,000# working strength and the top
set are over 6,000).

I'm the only ham in the subdivision and within one and a half to two
miles that has a tower up. I've never received an RFI complaint with
the exception of one neighbor having a foot ball party in their garage
and the TV set had rabbit ears. I gave them a spare antenna for the
set in their garage. It's a good neighborhood except for one guy (5
houses away) who has one of those big mercury vapor lights on the face
of a small shed that serves as a reflector and shines right into out
back yard. So much for the Amateur Astronomy.

>care. However, something tells me that if he/she had to sell their home
>they would take down their antenna first and ask me to do the same if a
>realtor said my antennas were driving potential buyers away. That's the
>hypocrisy I don't like.

It's not likely to happen around here. People are far more worried
about the county wanting to build a *big* jail about 300 yards to the

south. One neighbor directly south of me and east of the spot where I shot the photo had their property appraised to refinance. The realtor dropped their appraised value by $10,000 and specifically stated it was due to the *likely hood* of the jail across the road. So much for the county telling us it won't affect out property values.

Hello there, and happy holidays.

We Just got us a PRO-95 from RS ($129.95) and I have DL the Software for it, the WIN95 program. (Great Stuff Buy the Way, Spot on for StarSoft) Anyway I have found a yahoo group for my area here in Phoenix AZ, But I was looking for any one else out there who may have some good freq lists set up, maybe even the unusual other than the standard PD/Fire.
If anyone has some they would like to share I would to take a look. Now I just need to get my mind wraped around all this extra stuff it can do. I had gotten so used to my old 30 channel Uniden from 97 this Truncking thing is a a lot of information to process.

Thanks Again

Thanks! <:-))

>
Twas all put up by hand too<:-)) Which is why it took me nigh onto
two years to finish. Well, it'll never be finished as long as it's
up, but ...

The Tower is a 97 foot ROHN 45G. The antennas are mounted on steel
tubing which runs through thrust bearings at the top and about 12
feet below the top of the tower to a BogBoy Rotor.

The TH-5 tri-bander is at 100 feet, the 7 element C3i 6-meter beam
(with 28'10" boom) is at 115 feet. The 144 and 440 vertically
polarized arrays are on a cross boom at 130 feet.

If you change that link to tower.htm
(http://www.rogerhalstead.com/ham_files/Tower.htm) it should link
to the whole story or just go to my home page, table of contents, and
click on "My Tower Project". There are also some shots of the
"office" end as well.

There is one photo of installing the TH-5 that will give a good idea
as to the scale of the antennas. Note a lot of that antenna work was
done in the winter with some pretty low wind chills.

"Doing it myself" was an educational and fun project, plus it saved a whale of a lot of money. I have some fears if the county puts a jail within 300 yards we won't be able to coexist and that'd mean moving. I'd pretty much have to resort to having a professional crew come in, take the tower down and then reinstall it where ever we moved which would cost a small fortune which I'm not sure I could afford.

This is a nice quiet, rural subdivision with lots of Deer, Wild Turkeys, and other critters that come right up in the yard.

BTW, IF you have a fast connection there is a panoramic view from the top of the tower at http://www.rogerhalstead.com/ham_files/towerview.htm It's a huge file of roughly 19 Megs so it'd be a lost cause with dial-up. It's not a great image as the images didn't match perfectly and created some artifacts where they are stitched together. (I was standing on the tower top plate with the wind gusting 20 MPH or so when I shot the photos hand held) I'm going to build a bracket and attach the camera to the mast. Then shoot an image about every 15 degrees as the antennas are turned. Unfortunately the landscape is now much less colorful.

>'illegal'

The point: Many times it's not possible to purchase a home any where
near work, or schools, or convenient shopping without finding
restrictive CC&Rs. For instance in California you quite conceivably
might find it necessary to move a 100 miles to find such an area.
It's my understanding that there are a great many restrictions on
antennas in Florida.

Here? These are ordinances, not CC&Rs, I have to keep my grass mowed,
I can not keep cars up on blocks. I can not park a mobile home along
side the house for more than a couple months. I can not leave a motor
home parked in the driveway, or along side the house for more than a
couple of months, but I can build a garage big enough to park it
inside. I can not build a separate garage or shop larger than my
home. Virtually any major repair requires a building permit. There are
restrictions on outside antennas *except* for hams. "In recognition
for the service provided to the community" there are no restrictions
on ham antennas, but there are safety regulations. I have to abide by
the "set back" rules the same as anyone else and towers taller than 80
feet require a building permit and must be properly engineered. Using
the engineering data in the ROHN catalog is permitted.

We (hams) have a very good working relationship with the county. When
they built their new Law Enforcement Center the Emergency Operations
Center in it included a ham station. The mobile EOC van also has a
ham station built in. These are not just 2-meter FM mobiles either.

In addition, we are working on small, limited range portable repeaters for voice, data, and video in conjunction with the EOC.

Some years back I served as the communications for one of the evacuation centers when a train with some really nasty stuff, derailed quite some distance away. That operation took a lot of hams as the evacuation area was quite large. We were fortunate that the wind pretty much favored us, but it changed enough that the shelter where I was located had to be moved *in a hurry*. (I now carry a gas mask in my kit) Moving a whole bunch of people who have just been awakened at 2 AM, through a cloud of *stuff* that makes it difficult to breathe and very limited visibility is an experience.

Where is here? Homer Township, Midland County Michigan.

>complain about the rules you disagree with.

And that would solve what <LOL>
The majority of the land around here is zoned although the zoning
varies from township to township and county to county.

Here, even if you own the biggest farm in the region you still can't
have a pile of rusty cars in your yard. Now you could get your area
rezoned commercial and then get a license and then create a junk yard,
but it's more difficult to get farm land rezoned than to put a junk
yard near a residential area. You'd probably stand a better chance of
trying for the center of main street down town.

>
I attended a township meeting in another county and high on their list
was going after some guy who kept hauling junk into his yard against
zoning. (they figured most of it was stolen but old iron pipe and
tanks are difficult to trace).Another was some one with a bunch of old
tires laying out back. Besides being unsightly they are a health
hazard (mosquitoes and West Nile Virus) along with being a fire
hazard. One pile in a neighboring county caught fire. Now there was
a fire. There were over a million tires in that pile and it was a
legal storage.

Zoning tends to be along the lines of common sense. Safety for one
thing. CC&Rs OTOH are what some one wants to see, or not see, done or

not done, conformity. The ham tower serves a function whether of the greatest aesthetic appeal or not. The rusty cars benefit no one except possibly the owner.

So to when it comes to CC&Rs Vs ordinances. CC&Rs are open to interpretation by the HOAs and they can change those interpretations.

Say you move into a nice subdivision and like many the CC&Rs are so vague you need to get a legal opinion. Not satisfied you have the head of the HOA give you his/her opinion. As far as they are concerned you can put up that 100 foot tower on your 4 acre million dollar lot with the two million dollar home. You purchase, move in, put up the tower and get a visit from the members of the HOA who tell you the tower must come down. You point out the discussion with the head of the HOA and they simply state they must work in unison and he/she does not speak for the entire HOA.

Say you had the foresight to get the contract in writing. The same as above applies. Or they can downright change their minds as to the interpretation. Now with a lengthy legal battle and I assume any one owning a house and lot worth three million could afford to do that, there is no guarantee you'd win. Also due to being the outsider you would open yourself up for harassment which you might have a difficult time proving.

So back up to the zoning and regulations. Say you don't have to worry about CC&Rs, but discover the township has a prohibition against any structure over 25 feet. Typically, with a tactful approach pointing out that they are superseding a federal law when it comes to amateur radio towers might get you that variance. We had just such a case in a township north of Midland. Several hams had tried for years to put up towers, but to no avail. A new guy moved in and several months later had a 60 foot tower. He took the proper approach and was prepared.

OTOH if the township is immovable, you most likely will win a court battle and lawsuit, but it takes money to do that. Most often a *lot* of money. Normally a lot more than you'd get back. Vindictive township officials can be a royal pain, but nothing like vindictive HOAs.

OTOH you might discover there are no homes available without overly restrictive CC&Rs within 50 miles of your new job that pays $50,000 a year. What HOA are you going to fight on that much?.

Having said all that, I fully expect to see passage of a bill that will void any CC&R restriction on ham antennas deemed unreasonable within the next decade IF government continues in its current direction of recognizing the amateur service as an asset. Particularly in the light of Homeland Security.

And therein lies the major difference. Whereas it is not a 'mandate' in the true sense of the word, it has long been a standing relationship between amateur radio ops and the local, state and federal authorities that hams perform essential communications and other assistance during times of emergency. (this is why, among other things, ham plates are not considered vanity plates in most, if not all, states). And these towers and arrays are important to the facilitation of those emergency communications.

Then there is the problem of electrical wiring on the inside of the
wall too. <:-))

The plane I'm building (335 MPH hot rod) is all advanced composite.
The plans call for the antennas to all be inside. Unfortunately the

VOR antenna is supposed to be in the horizontal stabilizer. They
changed the material so the horizontal stab is all carbon fiber.
Wellll...maybe it'd be good for deicing.

>> television connections, and is a nuisance. I think that's a lot of what

That is a fault of the cable or someone using the cable even if the
amps are illegal and covered by some rather strict laws.
.
All it takes is one poorly shielded device hooked to the cable near a
transmitter. The device can create harmonics and mixing products that
will wipe out a channel, or even the entier service to an area. A
good example would be an attic antenna next door to some one who
hooked their rabbit ears to their TV set with the cable still

connected. The lower antenna is closer to the set and more likely
to cause interference. It is also more likely to couple RF into the
house electrical wiring causing all sorts of problems due to RF in
radios, TVs, stereos, CD players and computers.

I once took out an entier city's cable system with a 2-meter HT as a
demonstration. (a very brief demonstration at the cable office).
Two days later you couldn't find a leak in the system any where in
town.

>Such association rules force the LEGALLY LICENSED operator to use low height
>indoor and hidden antennas. Theses types of antennas are far more prone to
>generate interference than something well up on a tower.

And it exposes the user to RF fields far greater than normal.
There is a reason I have my 2-meter antennas at 130 feet. Even there
I am limited to 380 watts into the antennas due to exposure limits.
At 30 feet I'd not even be able to stay with in limits using my 50
watt mobile on those antennas. Considering there is 228 feet of coax
from the rig to the antennas I could probably run a KW output and not
exceed the limits.

Actually...when it comes to exposure limits: My TH-5 is at 100 feet.
With 1500 watts into the antenna the RF limits for controlled access
are 6 feet above the ground at the base of the tower. I guess I
should paint a red strip around the tower at 6 feet. As that is slant
distance the height goes up rapidly as you move away from the base of
the tower

Ah yes, the "but if he paints his house orange and puts a giant unicorn on the front lawn, the resale value of the properties in the area will drop!" nonsense. Let us suppose this would in fact occur. The neighbours gang together and nail an invoice to his door, and this is the "right" thing to do. What about the converse? Suppose someone instead made their property into a gorgeous work of art that _raised_ the value of the neighbouring properties? Surely this means he can issue invoices to all the neighbours he has "helped", right?

> That is the whole point of covenants. Something that protects me
> when I want to sell.

YOU protect your own property. It is why it is yours and not someone elses. These HOA's and similar entities are the analog of labour unions for property owners. Complete idiocy, with _ALL_ of the hideous bad effects of such things. Why have two bosses when one is bad enough? The protection you refer to is as illusory as the thousands of unionized workers who lose their jobs every year: "It's in the contract. So sorry."

I'm curious about two types of transmissions from aircrafts:
1. squawk transponder Mode-C Secondary Surveillance Radar (SSR) or whatever
2. ACARS

I know ACARS is around 131 Mkz usually, but what frequency is the SSR stuff?

What would they sound like on a scanner? Does ACARS sound indeed like
a short bird squawk, listening in AM mode? I will attempt to decode it
with acarsd.org's Linux program.

How about VOR's, ~110-115 Mhz, listening in AM mode? My squelch opens
up but all I hear is silence, correct?

What does TACAN sound like?

Describe them, don't just refer me to some sound files that are too
big for little me to download.

P.S. CW means Morse code, but what about the CWP seen on aviation
maps' frequency tables, does it just mean the same?

Have the store associate plug your new PRO-95 (or PRO-96!) into
there Radio Shack computer and take advantage of the offer of "FREE SCANNER
PROGRAMMING for inshore purchases" If you have ANY trunking activity
in town this will save a lot of time getting the PRO-95 up and running.

Once they have pre loaded their scanner files into your new scanner
you can take it home and 'fine tune' the banks to what you want to listen to.
Hopefully the in store programming will at least get most of the trunk stuff into
the radio scanners, and in the correct format and LCN order!

Get a computer cable and software this will help fine tune the memory and you
can
add your selection of talk groups after they load
it up in the store. Then make a back up of the scanner's memory
Hears a site with more information:

<http://www.strongsignals.net/index.cgi>

Check out the software page!

most people do,but the thing is its advertising on a group thats the problems,some software designers/scanner retailers are on these groups.so it looks bad and makes them more determined to do something about it.

search on the net you may find something or privately mail other VR500 users.

you ask on a group and you never know who is watching??

Its the same thing that you can get from Don Starr for free. I emailed
that bozo on ebay and learned that he is a total fraud. I like how he
makes it sound like you can get cellular but when I asked him what all
freqs it would open up he says everything but cell. He also informed me
that I have been banned from the auction because I was suggesting using
it for illegal activities. LOL like I would have bid on it anyway. I
dont think he was too happy when I told him that I would let everyone
that bids on it know that he is a total fraud and that they can get it
for free anyway :)

if u r in the UK.
it will probably be found between 165<>166MHz only (base)
& + 4.8MHz for the mobiles

there r low band freqs (86<>87MHz) but they r rare & being phased out.

CW does not mean "morse code" as Dan suggested.... CW means "continuous wave", which is one (slightly misnamed) method of transmitting morse code... (it's not continuous at all, because it is "interrupted" to produce the dots and dashes).

Most morse code identifiers that pilots hear are Amplitude or Frequency modulations on top of a continuous carrier signal, and not "continuous wave", in the classic sense, at all.

WHO are you to tell me or someone else what you consider is "in check" or not? You deal with your property and the rest of us shall deal with ours. Your starting to sound like your on the board of some HOA who enjoys telling their neighbors what they can and cannot do on THEIR property.

People that purchase a nice house for let's say 200,000+ are not going to have some junk vehicle sitting in their yard, paint the house bright pink, etc.. Most HOA's require you to hook up to (how is getting the kick back)cable, they don't want even the 18" dishes. Well they finally have lost out on that one. That's only the start.

Trespassers will be dealt with according to the law. That includes HOA COPS.

"ATTENTION:

To clarify some issues that have been popping up in the hundreds of
emails I have been receiving:

You are bidding on data files, not software. The files make it possible
to scan frequencies that you cannot otherwise enter into the GRE made
RadioShack scanners. The software used to enter these codes into the
scanner is free.

I am not selling the capability of listening to cellular frequencies. I
an true to the fact that certain analog cell phones and cordless phones
can be monitored, however, to do so would be illegal. The only
frequencies that are absolutely not possible to be programmed into the
scanner between 0 and 1300MHz are 824 to 848.99375MHz and 868.99375 to
893.99375MHz. These sets of frequencies are always completely blocked by
the scanner because they are considered primary radiotelephone
frequencies by the FCC."

So what he's basically selling are Win95 data files, which anyone can
create and Don Starr tells you how to create and are available around the
Internet, for the starting bid of $3.95

Well two people fell for it, and the final bid was $6.40.

Fuck that. If I move into an CC&R addition, I expect people to follow the rules. I would hope my neighbors would be smart enough to read important real estate documents. I don't care if my home is $300K. If some ham puts up a huge antenna and they make an exception, I will be documenting everything. As soon as that ham puts up a 4-sale sign, my huge ugly tower will go up. You wouldn't be against _my_ right to do this, right? If the ham had the balls to even say something about it I would laugh. In other words the ham would want his tower when it suits _him_, however if he takes it down to sell the home and a neighbor puts one up...that's just not right.

>> I have moved to Fla. and were I am everything is trunked freq's and I can't seem to get the Freq's to scan. Does anyone know what I may be doing wrong.

Ken,

We need more information to be of assistance.

What trunked system are you trying to monitor ?

Do you have a programming cable, and software for programming the Pro 92 ... such as Win92 ?

The Pro92 list on www.yahoogroups.com has some compatible .spg files for monitoring some Florida trunked systems ... which you could load directly into your scanner with a cable and software. The .spg files are in the "Files" section of the Pro92 list.

If you visit the www.trunkedradio.net website, you can access the "database" section for Florida, then choose the trunked system you wish to monitor. You'll find relatively accurate information on the system frequencies, sites and talkgroups.

Trunkedradio.net also has an excellent "forums" section for each state, to discuss trunked monitoring.

I don't remember about the database, but you will have to register to use the forums section. Registration is free, though.

Florida also has a large number of scanning groups. I'm familiar with groups in the Jacksonville, Brevard Co, Tampa, Tallahassee, Miami and Central Florida areas.

Keep in mind that a trunked system might not be operational, as I ran across during a stop in Lake City, Fl last week.

Or, the system might be digital, which the Pro 92 won't decode ... such as Jacksonville.

It does amaze me, Pappy, how many are so willing to accept, and even defend, additional restrictions on people's lives and property in this supposedly free country of ours. These homeowners associations, which are, in effect, a new layer of government, don't act in a democratic manner and neither respect, nor even clearly recognize, people's rights.

Instead, these homeowners associations remind me of the communist party committees found in neighborhoods throughout the former Soviet Union before it's collapse. Like these homeowners associations, those committees made neighborhood rules and insured area residents complied with those rules. The Soviet people gained freedoms after the fall of the Soviet Union and it's many committees. The American people are losing freedoms as these homeowners associations, and their CC&Rs, spread.

Some here have advocated just avoiding these homeowners associations, and their CC&Rs, by moving elsewhere. While that may be a temporary fix (serves their own self-interests at the moment), I'm sure many in the Soviet Union thought the same when they first saw the spread of those communist party committees. But, without open resistence by all, there was no place left to avoid those committees within just a few years. I sincerely hope the same cannot be said by young people about these homeowners associations in the not so distant future. However, everything I've seen suggests that is a clear possibility.

If respecting people's rights was entirely consistant with human nature,
nobody would have considered writing a few of them down in the various
governmental Constitutions.

So, have many Homeowner's Associations dissolved themselves and handed
their responsibilities to a municipal government?

Well I finally got it to work in all functions. For some reason it did not upgrade my previous version. It took several times of reinstalling and removal to get it to work. Right of the top it is now where near as good as last years and it does not contain the Aviation, Railroad, and Shortwave frequencies in searchable form. instead these were placed into separate PDF documents. I was very impressed with last years product! Too bad this years seems to lack the robustness and completeness of last years. To me it is clearly a inferior product when compared to last years Police Call.

I was able to listen to STP VOR (108.0) on an analog-tuned FM
receiver when living in St. Paul. Not very exciting -- you
heard the voice and code identifier continually. Not the
most exciting listening...

3275. Coax Question

Newsgroup: rec.radio.scanner
Date: 2003-11-29 16:54:51 UTC
From: Robert11 <rgsxrose@comcast.net>
Message-ID: <LpSdnVmnpcqUUlWi4p2dnA@comcast.com>
Source record: 24378

Hello:

Question on Coax.

I am presently using a 50 foot run of 50 ohm coax to my scanner.

It's the 0.4 inch low-loss diameter stuff (I think LMR 400), and I wanted to add a short length of
a coax between this cable and the scanner to remove the strain on the radio's connector due to the stiffness of
the LMR 400.

All I can find pre-assembled with BNC's is 75 ohm RG59.

It's about a 3 ft length.

a. Think the 3 ft radio-to-75 ohm patch cable, then to the 50 ohm main cable will cause any "meaningful" loss
due to the Z mismatch ?

b. Would I have been better off using a 3 foot RG58 (50 ohm) patch cable, even though the RG58 is really lossy around 1 GHz ?

Thanks,
Bob

I spent five years on the board of, and two years as the president of, a 721 home development board of directors. We had a few blowhards who, like many in here, told us to go to hell and parked cars on blocks and the like.

It wasn't rocket science. We voted a 30 day "take it away or go to court." We were impolitely told to go to hell. We didn't go to hell, we went to court. Not a big deal. Between the court costs and our lawyer's fees, the blowhard had a thousand dollar junk car project to remove. Three or four cases like that in the first couple of years and things got remarkably quiet, and we all got along like neighbors respecting the wishes of each other.

I took perverse satisfaction in stringing copper tape under the eaves of the house, strangely just long enough to make a quarter wave dipole for forty meters. But it was painted with exactly the same shade that the eaves were painted, run with a quarter-gallon with adequate filtering, matched to the n'th degree, and worked the world on everything from forty on up. You could walk right up to it and not detect that there was an antenna of any sort.

Not to mention the 2-meter groundplane disguised as a chimney strap. Painted wrought-iron black and strangely so, 19 inches long. Coax? Run down a mortar seam and painted mortar grey. From five feet away, it was indistinguishable from the mortar.

I laugh at you blowhards telling us how you will do what you damn well please when and where you damn well please to do it. I note that none of you have tried it.

Clever works. Big mouths don't. And, if you don't like the rules, either don't move in or once you move in then try to change them. If a majority of your neighbors agree, it is changed. That's the way I learned that this country works.

"take it away or go to court."? This looks a bit like a small minded battle of the wills between Mr. BH and the Homeowner's Association. But I could easily be wrong. Did the Homeowner's Association give the car owners the option of fixing the cars? Did the Homeowner's Association ask for volenteers to help make the cars safe and reliable? A few guys who know what they are doing can get alot done in 30 day's spare time. It would be a neighborly offer to make.

I'm curious. How much do antennas reduce property values? Is there a
formula for such things?

Sometimes those meddlesome courts think the country works differently.
They said the CC&Rs which prohibit a seller from selling his property to
Blacks or Jews or Mexicans or any group in particular can't be enforced.
I suppose it had something or other to do with civil rights. The
Homeowner's Association can still regulate the color of the neighbor's
house, if not the color of the neighbors.

Your right all you will get from a VOR or ATIS is the CW identifier,
weather and current active runway information.
Tower, arrival and departure frequencies will be more active.
Also 121.50 mhz emergency and ELT, 243.00 mhz emergency

"Frank Dresser" <analogdial@worldnet.att.net>
shared these priceless pearls of wisdom:

->"take it away or go to court."? This looks a bit like a small minded
->battle of the wills between Mr. BH and the Homeowner's Association. But
->I could easily be wrong. Did the Homeowner's Association give the car
->owners the option of fixing the cars? Did the Homeowner's Association
->ask for volenteers to help make the cars safe and reliable? A few guys
->who know what they are doing can get alot done in 30 day's spare time.
->It would be a neighborly offer to make.

The automobile could stay in the open carport for 30 days while being repaired (and there was no prohibition against working outside) or 30 days out of license. After that, the vehicle was in violation of the nuisance/eyesore part of the regs. There were also loopholes that allowed vehicles of obvious historical or antique interest more time while in the process of restoration. There was no contest of wills; the feller had the mindset of a few in this conversation who had absolutely no intention of abiding by what he signed. And we DID, by the way, require any real estate agent peddling property in the project to give the prospective owner a copy of the current regulations PRIOR to signing any binding contract.

We also had the local 8th grade students read the regulations and any proposed amendments. If half of the students couldn't tell us exactly what the regulation said, it went back to the lawyer for rewrite at the lawyer's expense.

->
->
->> Three or four cases like that in

->got along
->> like neighbors respecting the wishes of each other.
->
-
->
->I'm curious. How much do antennas reduce property values? Is there a
->formula for such things?

Nope. And the primary purpose in my mind was NOT a reduction in property values. After having been a ham, elmer, and examiner for damn near 50 years, I still find a huge tower with beam in a small-lot residential neighborhood ugly.

->
->

->No sir. Not me. I'd much rather discuss things politely rather than
->start telling people what to do.

We discussed politely but firmly. We didn't tell anybody what to do. We simply explained what the man already knew and said what we intended to do about it. There was no telling anybody anything.

-
->

I do not know the freq's for Ontario, but here in Alberta, forestry,
wildlife, environment, etc., are in the 154 Mhz and 411 Mhz range. So
may want to try a search on your scanner. You may attempt to search
this newsgroup, as there are a few websites for Ontario scanner users.

I do not know where you live, but here in Cagary Alberta Canada, the
cab companies freq's are all over the different bands. That is some
are in the 143, 148, 150, 151, 152, 162 163, 164, 452, 453 ,800 Mhz
etc. You may want to do a search with your scanner.

If you're in the U. S., check the FCC's web site and look for the
license. If they're leasing a system, however, the licensee may be
the radio company.

My good old standby was to determine the band (by the antennas used)
and search the band while sitting in the car nearby their office with
your squelch at maximum.

Contact the ARRL. They have data that shows that antennas have NO impact on property values. They also have data showing that, in general, property values are rising faster in areas without CCRs & HOAs than in areas with them.

Why does it have to be about damn property values? I think CC&Rs are more
of a way to help make sure that when I sell my home, my neighbors have not
gotten 'lazy' or 'crazy' over the last 5-30 years and done stupid crap. Be
it 'get into ham' and erect a stupid looking tower, put cars on blocks, or
paint their house 5 different colors. Everyone thinks that just because
property values have almost doubled (and in some cases went up 10 fold or
more) that the same thing will have in the next 20 years. Again, CC&Rs are
to protect your investment in your home. You don't gain anything in a home
sale if you don't sell your home. Would you offer to buy your neighbors
home if they had documented proof your antenna was scaring away buyers?

That is the whole damn point of CC&R. Your property value doesn't mean jack
if you cannot SELL your home. There are more people willing to look
elsewhere if my damn neighbor has some 20+ foot tower in his/her back yard.
Again, towers can't hurt 'values' when you can't even get a person to make
an offer.

For starters, most hams that put up towers with elaborate antenna systems would take them down when they moved (unless they became a silent key), because these things are not petty investments, they cost a lot of money. Some installations cost more than a new mid-sized car. The installation of the tower itself is held to much higher standard by law than the house itself is.

And again, unlike someone who puts up an old car on blocks, or paints their home in rainbow glow paint, hams perform a public service. There currently exists a rule within the FCC that disallows municipalities preventing amateur operators from erecting antennas, and a similar rule for CC&R's is in the works.

Please show us one case where someone was force (with a gun, knife, etc) to
buy a home in a CC&R neighborhood. No one is forced to buy a home in CC&R.
If you don't want CC&R, move.

My county just east of Indy has plenty of non CC&R neighborhoods. Oh wait, how horrible it is to think people would want to live in a 25-30 year old addition. Everyone wants to live in the 'perfect' place with no strings attached. That is living in a fantasy world. Like I said, the Indy area is nice. Plenty of 20-30 year old additions with good homes and no CC&R. Though you might have to compromise on various issues (almost all these additions have great school systems).

Actually many people prefer the 20 to 30 year old suburb as these finally
have trees of decent size. The problem is that in some places in this
country finding an area without CCRs that will mean an unreasonably long
communte to work.

I don't know where you live, but here we have zoning laws that control
much of the issues you are concerned about; and most towns have
enacted nusiance ordinances to handle less severe problems, such
as uncut grass, etc. BTW, I live in a AAA zoned area, and the ham
tower was not an issue. I kept in at the tree line, in the middle of
the property. Out of sight. Also, at one time I had three towers near
the house. The house next door was sold before it hit the market for
the full asking price.

To the purist, you should use the same impedance cable all the way through,
however in practice, you can get away with using the small run of 75 Ohm
cable. You will incur some additional loss in the system because you are
adding in some additional connectors.
Another option is to redesign the cable run with reagrds to where it
connects to the scanner. In using cable ties you can also take the strain
away from the connector by tying the cable to the bench or cabinet that the
scanner is on.
Alternatively you could look at using a right angle connector from the cable
to the radio.
Lots of options to consider.

Oh sure. And bigotry itself is still legal in the US, as it should be
in a nation which allows freedom of thought. But bigoted actions are
limited. As I understand, the courts will do nothing to enforce a race
related restrictive covanant, even if the buyer and the seller and the
local community support such restrictions. And that comes to my real
problem with Homeowner's Associations. It's not really about antennas
or old cars or knee high grass. That stuff is dealt with every day with
codes and municipal ordinances.

A Homeowner's Association is an extraconstitutional government. I have
no doubt that nearly all Homeowner's Associations are run by decent
people, including yours. But not always:

http://www.freerepublic.com/forum/a3b5efc12221e.htm#38

http://www.ccfj.net/HOAartflag.html

As far as I'm concerned, any attempt to restrict such fundamental rights
as a respectful religious display or display of the US Flag ought to get
laughed out of court, just as an attempt to enforce a racial restrictive
covanant.

OK, I'm missing something here. First I read:

"Why does it have to be about damn property values?"

Then:

"Again, CC&Rs are to protect your investment in your home."

I'm trying to see the important distinction between "property values"
and "your investment in your home".

What I read into this thread is there are people in our FREE country
that have a serious need to control other people. Those people like
another poster said are classified as HOA Cops.

When it comes to controlling them they revolt.

What is an AAA zoned area?

I live in a community where the county put in zoning laws many years ago
so the members of the HOA decided to turn over our roads to the county
for maintenance, dissolve the HOA entirely. We figured why pay dues for
road upkeep and some over zealous HOA officer/member who wants to take
his/our neighbor to court for stupid things. We already pay taxes for
road up keep but the county would not enter our plan because it was
considered private property. The only county services we had where
police, fire, ambulance. Now things are going much better. We have all
the services we where paying for but didn't receive before, the HOA Cops
are gone forever and the home owners seem to getting along much better.
There are no junk cars sitting around, no one painted their house bright
pink or any other crazy color, the grass in the yards are trimmed nice,
in fact nothing has changed in that respect. There are two 25 foot
towers now, one with a small beam the other a vertical in the plan, one
is mine. Both are hams and both are involved in emergency communications
during major storms. The neighbors call or stop and get weather updates
so they can make the necessary plans. Not one person has complained
about either of the towers, not one.

By the way, the HOA ex-official moved out about 6 months after the
county took over. He found out this is America, the land of the free.
Factually speaking, his neighbors refused to have anything to do with
him because of his over powering attitude. His friends soon followed him
down the road.

God Bless our "FREE" America.

Yup, I've used one of these solderless connectors to put a BNC connector onto the end of the cable of an old school magnet mount cell phone antenna. Since the 800MHz police/fire stuff that I listen to is pretty close to the cell phone band, I figured it would work a bit better than the stock rubber duck (and it does seem to help reception in the car). I've been happy with the solderless connection. It was a simple install.

A buyer is not always a rational person. They may walk away because they don't like the landscaping or the paint job or whatever. Can you see HV powerlines from the back yard? Want to bet how many people are certain those cause cancer? Can you see a cellular tower nearby? Buyers don't want "radiation". What about a next-door ham antenna? Why not be afraid of that too? What if that big antenna blew off in a storm? It could hit your house! And when hams transmit, they make radiation! Who wants to move in next to some guy who makes radiation for fun?!

You can't talk power levels and ionizing versus non-ionizing, because the buyer walks before you get that chance. Your neighbors know this, and this makes them fearful of what might happen to them if they wanted to sell. They don't care about your right to squirt RF into the world, all they care about is safeguarding their own families' (perceived) health and protecting the viability of their one big investment in life.

Some people will give up some of their personal freedom to buy into an area that has CC&R's, so they can have some assurance that bizarre (by their perception) things won't happen near their family and investment. And if they enter this kind of society, they have the right to expect their HOA to enforce the CC&R's fairly and without exception.

And, just like the USA, a HOA is not a democracy; it is much more like a constitutional republic. Once again, the homeowner doesn't vote on each and every issue (democracy). Rather, a board (acting for the homeowners; i.e., a republic) is elected, and they enforce the CC&R's (the constitution). So let's not have any more babbling about how a HOA isn't fair because it's not a democracy.

Then go to the FREQUENCY board at
<http://www.strongsignals.net/access/boards/frequency/board.cgi>

and scroll down to the bottom of the message pain and
check out all the resources there.
You will see cityfreq.com at the top of the heap!

Take the public safety frequencies you find for Punta Gorda and
the county, go over to the FCC General Menu report.

(FCC Database #1)
<http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts>

Plug in the name of the town as it appears in cityfreq.com
and the frequencies, to get the low down on who really
uses them. "PUNTA GORDA CITY OF " is not going
to tell you who's operating on them. You can listen or by deduction
,figure
the band plain out. But cross referencing them at the FCC site
will give the agency in Punta Gorda who is using them.
If a call sign is hyper linked, click on that and you may find
other frequencies and/or agencies.

Can I use, with battery pack BT-13 for TH-F7E, 4 Ni-MH instead 4 alkaline batteries?

4 alkaline = 6V
4 Ni-MH = 4,8V

TH-F7E will also work well?

Thank You

Maurizio

Maurizio Bonfanti <bSoyb.158155$e6.5786282@twister2.libero.it>...

^ Can I use, with battery pack BT-13 for TH-F7E, 4 Ni-MH
^ instead 4 alkaline batteries?
^
^ 4 alkaline = 6V
^ 4 Ni-MH = 4,8V

According to the manual the battery must provide between 5,5VDC and 7,5VDC.
So no: 4 Ni-MH (4,8V) will not work.

The external power port (DC in jack) will take 12 to 14,5 VDC so you could
connect 12 NiMh in series to it. Note: this port will accept up to 16VDC but
the transmitter shifts to low power at 14.5 to 16 VDC.

Frank

3318. johann, an addict, a dealer, a prostitute

Newsgroup: rec.radio.scanner
Date: 2003-11-30 20:24:14 UTC
From: Bruce Reilly <bruha@ilirv.com.pe>
Message-ID: <ae28e80f.52b513c3@news.ilirv.com.pe>
Source record: 24326

Dear Judges, Lawyers, Policemen, Guards, Counselors, Taxpayers, et. al.,

We are here. Like it or not, for good or bad, we are here. Who are we? We are the downtrodden and dispossesed, the self-torturing, the disenfranchised convicts, drug and alcohol addicts, the unemployed and unemployable. We are the children of poverty, financial and spiritual. We have and will have children of our own, grandchildren too. We are ex-cons, uninsured, homeless, of many colors and speaking many tongues. We are the enemy in what has become a domestic war against ourselves.

And who are you? You who like the tough talk of Tough on Crime? You who watch as budgets are cut in education and health care while you militarize a police force? Bullet-proof vests, automatic weapons, helicopters, tanks, robots ... the testosterone is oozing through the streets, more prisons, longer sentences, tighten the belt, spartan conditions, task forces, gang units, gun courts. And what is there to show for it? Unemployent stays low because half the population oversees those "out of the workforce", the dregs, the rabble, the enemy? Please tell me there is a deeper reason. Do you feel safer? More humane? More like a cohesive society with a shared sense of purpose, who can identify Us and Them? Do you live in a gated community or gentrified neighborhood? By the way, have you read the Declaration of Independence and US Constitution - or do you only know the first phrases?

It's about time we got together. Please know that I have yet to meet a convict who wants their child to be a thief, an addict, a dealer, a prostitute, or a violent individual. Most of us still have hope for ourselves even when stuck in the darkest dilemmas, ruts and catch-22s. Most of us believe in crafting laws and instilling order. Many of us have burrowed beneath the surface to find a spiritual sense of being, an understanding force at least as powerful as those we succumbed to, and many of use wouldn't escape if you opened the front door. Did you know that approximately 10 million Americans are either incarcerated, on probation, on parole or once were in those categories? Each of those 10 million have families, friends, neighbors ... and so closer and closer does the We interface with the You. Don't you think it's time we talked?

Are you ready? Can you accept that the road we are travelling points toward a grim and painful future? Do you have the heart to face monumental failures while bravely struggling beyond where we are now? I know that some of you are, and that some of us are, and this is what gives me hope. You need our insights just as we need your structure. It is never over, especially when a real solution, a real treatment for our sickness, is yet to begin.

In Solidarity,

Bruce Reilly (a.k.a Bruha)

This is a great well made stubby antenna with an SMA connector.
144/430/1200 mhz + Wide band receive includes pouch it came in.
"Mint" condition.
This is a great "stealthy" antenna for the Icom R-2 & R-5
worked great on my Yaesu vx-5r which i don't own anymore,
that's why i'm selling it.
this is small so it can be mailed in the regular mail envelope.

Only!!!! $15.00 shipped !!!!
thanks
Bob

Yep! He's right!

Go to city hall and ask Mayor Menino if you can get an abatement based on depeciated value caused by your neighbor's ham antennas. After he stops laughing ... [you fill in the rest].

I sold my home in Danvers [a Boston suburb for non Bostonians] for $20K above real estate appraised market evaluation/value of $270K while I had a Tennadyne T8 [8 element log periodic --- 13 to 33 MHz], a center fed doublet with open wire feeders, and a 2 meter vertical on top of a 45 foot tower in the back yard. The house sold on first day on market. [The Danvers Ham community, W1ZH, K1LQX and others, will gladly confirm the antenna farm].

The buyer's requested assurance that the antenna and tower would be removed prior to passing papers. My response "Of course!"

Deacon Dave, W1MCE

not trying to be rude or something. but if you live across the road. try throwing a freq counter on your antenna. maybe you will see atleast the tx freq of that vehicle. it will alteast narrow it down. most canadian bandplan is the same. if you find the input. search for it on the net and or the tafl list. never know when it is in tafl list. if not. it will or should show up somewhere on the net.

That's what hams want you to believe. They are right of course. Lets say your home is worth $175K before the tower. Then you try to sell your home. You get no _offers_ because of that antenna field next door. Therefore you cannot _prove_ that the value of your home went down. Hams are an elite group of people like others. I find it hard to believe that a ham selling their home would leave the antennas up while showing the home. Even if they are going to toss them, any realtor is going to tell the person to take them down.

So here we have:

1: The people did not want the antennas.

2: It's more like "Fuck my neighbor. If he is selling his home and can't
get a buyer due to my antennas, that's his problem."

If my neighbors use this unjust law to put up an antenna, I hope they don't plan on selling their home anytime soon. As soon as I see a 4-sale sign in the neighbors yard, that's when I get into ham myself and erect my big, bad antenna. Like you hams say, this wouldn't affect the property value or the sale of the home so my ham neighbor wouldn't say anything to me....right?

I think how tall the antennas are is what dictates if they are a problems.
Antennas that are as tall as the home and in the back yard really wouldn't
be a a problem for me. Huge big, bad antennas would.

Has any one taken advantage of the offer made by Radio Shack
to program your new police scanne in teh storer " With in store
purchase"!
I' m wondering how accurate and all encompassing are their frequency
files, is the trunk settings to the correct mode? Are "fleet Maps" and
talk groups
included?

<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F003&product%5Fid=20%2D525>

This is a great way to get a new trunking radio scanner up and running.
Then
take it home listen for a while. Step through the memory channels and
trunking systems
to find out how correct the information is. Then customize the scanner
to your area!
Even if there is not a trunking system with in your reception zone,
just having the conventional
frequencies entered shouldl be a great help!
Jim

> and "your investment in your home".

Investment in your home, to me, means what you paid for your home. Property value is what someone is supposedly willing to pay for your land and home. It doesn't necessary mean your actual investment in the home. If a chemical spill is discovered near the area, your property value might be $50K while your investment could be $100K (what you paid for your home). People want to equate property values with an investment that will _always_ go up, mostly due to the real estate boom over the last 3 decades or so. I don't see many people like that. Out of all my family, only a cousin actually rents a home. No many people buy a home, let it sit empty and hope that they can sell it for 30% more in a year. That is the main problem with CC&R. People think they are a way to help your property value increase. That's stupid logic. They should be more worried about just making sure they get what they put into the home. I believe CC&Rs do that. They make it so people can sell their home. I personally wouldn't have a problem with a ham antenna as long as it didn't interfere with anything in my home. If it did, I would ask the person to take it down. Chances are I would be a good friend to my neighbors since I am pretty easy to get along with. It's when hams get this attitude (like I am seeing here) spouting off: "Well, I got a new law supporting me so not much you or anyone else can do." That's when the gloves come off. Screw them. They thought they had a friend....I hope the person never needs something or tries to make small talk.

> The problem is that in some places in this country finding an area without
> CCRs that will mean an unreasonably long commute to work.

That's my point. It seems more and more, no one is willing to compromise. Hams want no CC&R and have everything want. Scanner people want what they want. Short-wave people want what they want. My commute is 20 miles. I would be fine with driving 30. Some people can't stand that, so they live in vinyl villages and in urban areas. Some people think 10 miles or more of a drive to work is horrible. I don't see how these people would survive if they had not found their little niche a few decades ago. Would they just be bitter? I know that if I want to live rural, I have to look at almost a 30 mile drive. So? I save my money and take care of my car. If it's that big of deal, buy a Honda. Of course then there are the rich folks who can never been seen in a Honda. Those are the people I tell to go buy an Acura!!

I have seen this attitude more and more with the younger generation. No home less than 5 years old. Fancy SUVs, etc etc. Live paycheck to paycheck. These are actually the CC&R cops you people talk about. Always bitching about so and so violating this and that.....only because they think their home is going to double in value in 10 years. Me, I hope to live as rural as possible. Even if that means my ham can put up 500 towers. Depending on what it does/doesn't do to my electronics and his/her attitude after I let them know about it, will determine if I see them as friend or foe. Hams serve a purpose, a good one....but this doesn't mean they should use some law to skirt the rules of a contract they were never forced into.

>values of the houses next door?

Now that is one of those open ended questions and gets an "it all
depends" for an answer.

If you mean an installation such as
http://www.rogerhalstead.com/ham_files/Tower30.htm
The answer is no. In the photo there are beams for 20, 15, 10(1),
6(1), 2(2), and 440(2) for a total of 6. plus two verticals for 144
and 440 and a multi band vertical on a 32 foot tower for 9. Then
wire antennas for 75 (2) and 40 (1) for 12. Then three dishes for
satellite and microwave for 15 and two UHF TV antennas for a total of
17. It's not figured in the evaluation of our property as either a
plus or minus.

It's a rural subdivision that is heavily wooded. Except for a couple
of back yards and a corner lot the system is not readily visible. Yet
from half a mile away it stands out readily, being well above the tree
line. The house to the south just sold with nary a question as to the
antennas.

When I first installed the top mast one neighbor asked about it
falling over. We measured the distance and he was well outside the
radius. Plus they now call it the neighbor hood lightening rod as they
have seen it get hit at least twice while they were sitting in their
family room watching a storm. They also watch to see what we do when
the weather gets bad and have the local repeater on their scanner.

Nothing else in the neighborhood has been struck since I put it up.

You'll have to fix the return add due to dumb virus checkers, not spam

Nobody today was forced with a gun, knife, or whatever, to be born in this country either, but we still have restrictions on the government's ability to interfere with our lives (without having to move to get it). The same cannot be said for CC&R's. These homeowners associations, and their CC&R's, restrict our lives in ways our federal government would not even consider. The only way to escape those restrictions is to move - in a country where homeowners associations, and their CC&R's, are spreading to the point where there may someday be no free place left to move to.

I'm kind of new to scanners and need some advise. I'm trying to decide on either the Radio Shack Pro-92 vs the Pro-95. I don't know how important it is to have the EF Johnson LTR that the 92 has but the 95 doesn't. Otherwise, the 500 channels of the 92 is sufficient for me -- I don't think I need the 1000 channels that the 95 offers.

What are the other differences between 92 and 95, and is there some factor/consideration that would be a deciding factor between the two models?

Thanks for any advise you might offer me.

I worked in Indianapolis several years ago (as a security specialist for DFAS in what was once Ft. Ben Harrision). Since the DoD supplied our residence, we were not personally affected by CC&R's. However, we did casually look into purchasing a house with the idea of possibly making that area our home. During that process, we ran into several houses with CC&R's (especially in the north-eastern part of town). But, on the south side of town, none of the houses had a CC&R. That has probably changed today. But I don't doubt the mostly open, mostly country, areas east of Indy are still relatively free of CC&R's.

I've used this service recently. It worked no problem when I bought the scanner. I lost the stored Freqs in a 'user mishap' associated with 'Win95' recently. I went back to RS to ask them to re-program it. They flat refused. In fact, the guy behind the counter stated "I work on commision and don't have time for this". Mind you, it took all of one minute to upload the Freqs to the scanner on the first go-around, and I actually was buying another antenna at the time. I finally convinced the store manager to give me a printout of a local EDACS trunk I was after. In his defense, he stated that "we get too many requests for re-programs..I'd rather show you how to program the scanner than to have you come back time and time again for re-programs". I told him 'I know how to program the thing, I just wanted the Freqs'. So, for whatever it is worth, don't be surprised if you get this same treatment. I can tell you that I am less apt to return to this particular store in the future.

I do not know of _any_ single addition that was built in the 70s/80s without CC&Rs actually vote to have them. In my area alone, there are 4 older neighborhoods....none of them have CC&Rs. CC&Rs were rare and usually for the high end neighborhoods. Now all the newer neighborhoods have CC&Rs. The whole point is that besides the northside, Hamilton Co., and newer additions...Indy provides plenty of neighborhoods on all sides that do not have CC&Rs. I guess that is why I like it here and decided against moving to see other parts of the country. I can only imagine how horrible mega cities are. Still, fact is that Indy does offer plenty in terms of jobs in almost all fields...especially bio-technology tied in with pharmaceuticals. If I ever moved it would be to a like size city, and Montana, Idaho area would be my first choice.

These units are close enough in function that price may be the only deciding factor if you don't need 1000 channels. You don't need EF Johnson LTR unless you have one of those systems in your area.

Largest cities...

Billings, MT 131,622
Boise, ID 185,787

Indianapolis, IN 1,607,486

There were 3 times more people in Indy in 1910 than there are in Boise
today..

Strange thing about home values, investment, etc -- In Silicon Valley aka San Francisco Bay Area - homes are in the high 100,000+ -- many a Million+ and many with no HOA and old TV/FM antennas left on the roof -- as well as more than the average number of Ham antennas.

I don't know if CC&Rs help home sales. People buy and sell homes
without CC&Rs just fine. CC&Rs may be a negitive factor, if you
consider the large number of potential buyers who don't like CC&Rs.

Well, people do have rights, although the right to put up an antenna may not be among the rights the Constitutional government was formed to protect.

As far as the value of a Homeowner's Association is concerned, I guess it comes down to which of your neighbors deserve the most distrust. Will it be the new neighbor who inexplicably paints his new, expensive house pink and black like a box of Ju-Ju Bees? Or will it be the new age neighbors who replace the previous reasonable board members with a bunch of Feng Shui loonies?

They'll come and do a walkaround with their compasses and tape measures and notebooks.

"Pull up those pink flamingoes and put wind chimes here."

"You must plant a tree. I marked the correct location with a stake."

"Move that doorway to here. No, not there -- HERE!!"

"Bad Feng Shui is bad for property values!!"

Can't happen? Of course not! Not in anyplace that can't stop a respectful flag display or religious monument.

Bush Commits Treason, Again \ \

--

WASHINTON POST

http://www.apfn.net/messageboard/11-04-03/discussion.cgi.10.html

/ / George W. Bush is a thief.

On May 22, 2003 President Bush issued Executive Order 13303,
``Protecting the Development Fund for Iraq.'' This order invoked the
``National Emergency Act'' to effectively seize Iraqi oil and oil
revenues, ostensibly to ensure they are spent on ``Iraqi
reconstruction.''

But that's not the way this Order has been used, or the funds spent.\
\

--

http://www.commondreams.org/headlines03/0601-08.htm

/ / For example, they were able to detect that anthrax growth media
had been burnt and buried in bulk at a site next to the production
facility at al-Hakam. There was no way - and there never will be - to
tell from the soil samples the amount destroyed. As a result, UN
inspectors recorded this material as unaccounted for: neither verified
destroyed nor believed to still exist.

Translated into statements by the British and US governments, it
became part of "stockpiles" that they claimed Iraq was hiding from the
inspectors. \ \

--

How much better are things in Iraq today?
http://www.theleftcoaster.com/archives/000827.html

/ / The people currently in Tikrit are just ordinary people whose homes and children are as precious to them as American homes and children are precious to Americans! This is contemptible and everyone thinks so- Sunnis and Shi'a alike are shaking their heads incredulously. And NO- I'm not Tikriti- I'm not even from the 'triangle'- but I know simple, decent people who ARE from there and just the thought that this is being done is so outrageous it makes me want to scream. ....
...The troops are claiming that the attacks originate from these areas- the people in the areas claim the attacks are coming from somewhere elseï¿½ ï¿½ I really am frightened of what this is going to turn into. People seem to think that Iraq is broken into zones and areas- ethnically and religiously divided. That's just not true- the majority of people have relatives all over Iraq. My relatives extend from Mosul, all the way down to Basrah- we all feel for each other and it makes decent people crazy to see this happening. \ \

--

Deadly suppositions
http://www.rationalreview.com/rlwrights/112603.shtml

/ / That's right. American troops are now being used to destroy private property of "suspected Iraqi guerrilla fighters." What happened to requiring proof before depriving someone of "life, liberty, or property" as stated in our own Constitution? Evidently that does not apply to people we attack so that we can bring them our way of life. \ \

--

GO F*CK YOURSELF, MR. PRESIDENT
http://www.antiwar.com/justin/j112603.html
/ / We must act, even if the threat is nonexistent - because of the potential danger. If "self-defense" consists of necessary "preemption," then what would happen if we started acting on this Bushian principle domestically? After all, killers, robbers, and rapists don't announce their intentions, politely putting us on notice before they strike. Why not just jail them before they have a chance to commit a crime? This principle, if applied within the U.S., would lead straight to totalitarian rule. Applied abroad, it means perpetual war. \ \

--

I Know When Bush Is Lying: His Lips Move
http://military.surfwax.com/files/Weapons_of_Mass_Destruction.html

/ / The Bush regime's panic is reflected in its adoption of Israeli revenge tactics, using F-16 aircraft to drop 500lb bombs on residential areas called "suspect

zones".... ...Lianne Seymour, widow of the commando Ian Seymour, said: "They misled the guys going out there. You can't just do something wrong and hope you find a good reason for it later." \ \

War Propaganda
http://www.currentconcerns.ch/archive/2003/02/20030228.php

/ / In other words, the military actors and politicians are totally blinded by the "war on terrorism" dogma. Truth is falsehood and falsehood is truth. Realities are turned upside down. Acts of war are heralded as "humanitarian interventions" geared towards upholding democracy. Military occupation and the killing of civilians are presented as "peace-keeping operations." The repeal of democracy is portrayed by General Franks as a means to providing "domestic security" and upholding civil liberties. \ \

--

http://www.bushdraft.com/

/ / With the threat of 56% of troops not re-enlisting Bush is going to need a draft unless he changes his policies soon. I'm sure you agree, I'm sure you don't want your friends, family and coworkers drafted either. To fight for what? freedom? When George Bush passed the Patriot Act and now the Patriot Act 2 he took away many of the rights that we cherish so much. Why are we "bringing freedom" to the Middle East when Bush has shredded the constitution and taken away our freedoms at home? It doesn't make any sense. \ \

--
http://www.globalblogs.com/binationaltimes/archives/00000116.html
"Yes, Bush lied"

/ / WASHINGTON - A year ago, on Oct. 1, one of the most important documents in U.S. history was published and couriered over to the White House. \ \

--

This is why I plead with armed Americans to kill the unarrested bush for the love of children everywhere. Look, we know directly who the bushites are who PUBLICLY advocate the murder of innocent People through corporate censorship, who support furthering the demon antiChrist's senseless crimes against my America, and our World. Example: You'd think Art Bell figures none of his listeners could in no other way, learn of traitor bush murdering thousands in New York City, and his

contemptuous silence on the issue forbidding anyone else from publicly mentioning it. I have dominated alt.fan.art-bell for years, while Art Bell, like Canada's Peter Warren, will continuously advertise open line calls, but abruptly end calls topicing on KNOWN FACTS surrounding their evil false deity bush, 9/11, Iraq, depleted plutonium, Halliburton, and the deaths of our innocent lives fallen to their personal inaction depicting our community as uninterested. Art Bell in FACT has pre-screened his "open line" calls since bush stole power, and does so, to make appear Americans aren't clued in, on the now hundreds of thousands of innocent lives bush has murdered as war criminal. A good nazi bushite, is a dead nazi bushite, halted from advocating further war crimes constituting the murder of our innocent families. The dumfuk bushite parasites have been PURPOSEFULLY blowing themselves up with mined cluster bombs as suicide bombers! Not dying for any noble cause, but to only further toll more American Patriot lives. We should ask all soldiers, who are they loyal to, the 9/11 perpetrating American cop killer bush, or the People's America, as so enshrined by the Bill of Rights, and true Justice to actually protect the freedom of US people by following a leader?

These OUTNUMBERED and OUTGUNNED nazi bushites are indiscriminately bombing residential communities with radio-active toxic waste for nothing but to please their evil false deity, Our Mr bush Jr.. No rational reason but for a hatred to Your Humanity, and God if you believe.

Example: that evil nazi terrorist buford blount confesses to murdering thousands of innocent Iraqi People for nothing, no reason he proudly professes as wicked evil heinous traitor. Think of the lives You could save Patriot, by justly killing the unarrested buford blount, on hopes a person to take his place could at the very least consider being honorable in defending Your America? Demon buford blount is truly the enemy to American soldiers, for, if your family was murdered by buford blount irrationally commanding mindless bushite soldiers for nothing but to further rob the dying American tax payers, would you not too, spend your will hunting the evil nazi fuck down personally to spare further another innocent family suffering? To kill the unarrested unAmerican buforld blount is to stop him from ordering the practically dead already, nazi dumfuk treasonous bushite brethren teens, from victimizing again US as the innocent undefended.

While CNN still insists it's better for them to misinform and ignore, than to expose the demon bush as the true target for any Patriot's rage. American soldiers are being sacrificed to die for no known good reason, but for bad leadership as evil bushite war profiteers.

--
House Nixes Anti-Profiteering Penalties In IraqSpending Bill

http://www.senate.gov/~feinstein/03Releases/warprof103103.htm

/ / "When the Senate Appropriations Committee considered this supplemental request, Senators Leahy, Feinstein, and I joined together to criminalize war profiteering -- price gouging and fraud -- with the same law that was passed during World War II. Yet this amendment, was stripped out of the final bill," said Durbin. "I fail to understand how anyone can be opposed to prosecuting those who want to defraud and overcharge the United States government and the American taxpayers." \ \

--

--

/ / The Constitution cites "high crimes and misdemeanors" against the state as grounds for impeachment. Could there be any higher crime against the American people than to have knowingly deceived us in order to stampede us into an act of barbarism that has betrayed our finest ideals, our highest ethical standards, our national honor, and our whole history? \ \

Here's what a bushite's granmom's tax payment is going towards, minus the 1.5 billion per month of 4 that is secretly STOLEN by the bushmob as something Americans are forbidden to know of through their corporate news censorship stealing their very own demeaned values, dying.

How U.S. will spend $20.3B in Iraq
By SCRIPPS HOWARD

ACK! This Scripps Howard piece is missing from our internet world!

Hmmm.. now looking...
this following is an archive of official corporate news sources, of
which few if none report specifically on how the demon bushmob is
spending/stealing grandma's moola..

http://www.stern.nyu.edu/globalmacro/cur_policy/middle_east_news.html

looking more...

U.S.'s 'Iron Hammer' Code Name 1st Used by Nazis
http://news.yahoo.com/news?tmpl=story2&cid=1896&u=/nm/20031118/us_nm/iraq_hammer_dc&printe
r=1

Not surprising, but not what Americans should be following after....

Anyway, the cash breakdown of the criminal thefts of Iraqi assets
is now, as the tyranny of the nazi bushites, becoming harder for US to
find, why so?

We have stories like these ones still though..

Senate digs into Iraq $87 billion

The best evidence to kill bush quickly.

Demon bush "These terrorists target the innocent, and
they kill by the thousands. And they would, if they
gained the weapons they seek, kill by the millions and
not be finished. The greatest threat of our age, is
nuclear, chemical, or biological weapons in the hands of
the terrorists, and the dictators that aid them. The
evil is in plain sight, the danger only increases with
denial."

Remember: Demon bush doesn't forget signing his soul to
the invade Afghanistan plan by not following the 911
evidence, but would top secretly attribute to Laden for
blame, authored by himself, rumsfeld, Condoleeza, and

General Ahmad two days prior to the public event of murdering "thousands" in wealthy corporate America, a secret plan that has been confessed publicly to US as fully implemented by the White House right from the start to Jim at MSNBC, months after the fact when the demon antiChrist was caught with American blood in his breath.

Not to follow the criminal leads surrounding evil bush as mass murdering antiChrist, is what the White House confesses to Americans today as official policy under every circumstance. Karma. Demon bush tells corporate america that they'll persecute the innocent in any country by denying our fundamental human rights of Freedom and Justice, while now dropping 2000 pound bombs in God's World containing children, while corporate nazi bores, report in judgement of the great King who MAY have cuddled some cute boy! Jackson has given so much to America in stone, and in return, the corporate news nazi bushites sit condemning a great man whose open vulnerability gives him his wondrous strength and power as true American artistry. While these very same treasonous corporate bushite news anchors refuse to report on tommy franks running death squads against school girls, Guantanamo's Taliban's Girl School teacher Mozam Begg whose family served proudly for generations in the British Military, or tomorrow if YOU don't help US speak out publicly, continue refusing to report the general murder of civilian populations by the godless evil nazi bushite traitors. A good bushite, is a dead bushite halted for advancing their murder rampages against our innocent families irrationally. Demon buford blount, who runs like the nazi coward he truly is from my challenge to a death match, confesses to murdering thousands of US People for no military objective, but to get killed those that serve as bushwhored slaves under him to take his cowardly place instead, a die hard bushite nazi traitor. No government in Iraq would give WorldCom and Halliburton a blank check because they care too much for The People, nor certainly would they not, steal helpful Humanitarian Aid from poor people to pay the fraudster commi double billers, Halliburton again, nor either or, dump radio-active toxic waste on themselves to help bush's re-election campaign get off on murdering Americans for financial pain as God betrayers to US all. KILL BUSH NOW! Remember: a bushite soldier hides behind an American uniform, while knowing the bushmob has likely robbed their very own family of their savings and vital protection. Weak and cowardly, stupid and murdering

innocent People for the demon antiChirst as their false deity parasite they are dying for TODAY as. I HATE bush as much as any real man would. The bush demon sells his Satanism by offering NO skills required to be dishonorable and dishonest, no reading newspapers, or feeling the pulse of the plundering nation required while ransacking the faithful. While these corporate news experts and CNN and CBC censor pleads from Humanity paying the wages of evil bush's wars against freedom and God, Justice and America, denied our corporate news coverage to be my primary lonely concern mostly it seems sometimes, as too, how terribly it truly is for life whose love isn't appreciated by our will anymore as the living in america, oh yeah, I mean America.

As an American then, what life will you forsake where bush'll rob you over and over as the never living for something better? These american bushite nazi fuks, think your gonna wash their feet, and instead of defending yourself and family, just turn the other cheek right before the bushites drop a two thousand pound bomb or two on your innocent neighbor next door? Done for nothing but feeding the bushmob?, as unarrested buford blount contends in God's presence? Then to think, buford blount figures I as a real man will not seek him out one to one to the ends of this universe for payback.

What can God do to help, if your refuse to help yourself? The true danger to America increases with American doubts on bush's blatant, true naked evilness, or humoring God as Johnny, and betting on yourself for a change by supporting me as the time being? Look, what could you do for your freedom, when I demand the pursuit of Justice by following evidence to truly protect this World we share? Support my demand to raise the news media's ignorance on what you shout even louder?

Think this: demon bush makes no public mention of where almost half of the monthly 4 billion dollar tax payer bill is quietly disappearing while grandma loses her cable television, or only grandson? Is that Leadership I ask every American Soldier to be brave and forward this letter on terrorism to your fellow comrads secretly. Then, we'll see...

Johnny Wizard

> would be considered TRULY evil by demon bush standards
> too?
>
> Why does Johnny call the huge war criminal traitors puny
> dumfuk bushite soldiers? They die truly as cowards for
> the demon bush liar, being enemies of God and Humanity,
> because prior to the war, (as outlined on March 7th), we
> had completely unrestricted access to go wherever in
> Iraq, without delay. So, demon bush sabotaged America's
> ability to effectively disarm Iraq, and to bring
> peaceably, freedom in the region through JUST causes,
> all so he could STEAL further the lives of AMERICANS by
> continuing with his murder rampages against the
> innocent. We remember, Saddam offered the demon
> antiChrist, Our Mr. bush Jr. unfettered access to the
> Iraqi national media to preach his deceit against God
> and Humanity freely, but bush refused to publicly
> condemn Universal health care and education, along with
> what has been described as Humanity's greatest food
> distribution network. Instead, bush sacrifices bushite
> soldiers to steal OUR Humanitarian Aid, to double pay
> commi Halliburton, an american company found repeatedly
> by Our ARMED Police agencies, defrauding all Americans
> in criminal contempt for the People payers. All the
> while condoning the torture and enslavement of those
> known innocent still, but beyond american borders as our
> Humanity. Morally equating the rest of Humanity outside
> of Universal Justice as US fairly represented? Mr.
> bush tells God his plan is to victimize Humanity in
> America's name, by hiding behind who's flag again?
>
> Destroy the war criminating, unarrested American cop
> killer, our offensive Mr. bush Jr. instead my friend,
> and be thanked by God in person.
>
> Look, Mr. bush, rumsfeld, and franks have STOLEN food
> and medicine from Iraqi children by confiscating
> "Saddam's Money", and, it is now publicly understood
> that tommy franks, sabotaged the ORHA plan to create
> insecurity and chaos so to rob the central bank of

> billions. For tommy and his private banker friends to
> do this, he as a bushite had to sacrifice the lives of
> LEADERLESS American Soldiers as too weak and cowardly to
> say, "For God's sake, I'll wise up and destroy bush and
> rumsfeld myself instead to defend my loyal Brothers and
> Sisters I will, till the end, giving of everything for a
> life worth living", at least that is what a truly proud
> American Patriot who fights gloriously for a just battle
> as the good guys would. Instead as the dishonorable
> bushites, robbing blindly themselves and their own dying
> brethren, while bombing our homes with radio-active
> toxic waste, that contains among other things, deadly
> plutonium. Enemies of God as the bushite disciples.
>
> Wow! Wouldn't it be cool if America stoop UP and
> destroyed the war criminals bush and rumsfeld by simple
> supernatural Human Will power?
>

> of surprises and pitfalls along the way. Therefore,
> never ever lose faith in yourself, and in all you can
> accomplish. Count on yourself to always be here with
> you helping to make your dreams come true within reason.
> I can't wait to fly like a eagle! Most of this is
> easier done than said. I have learned that kindness is
> good, and cruelty is bad. Truth is knowledge, and
> knowledge is power. I am your creator that you have
> created! You! Right here! Words! Sitting at seven
> trillion years as the present and counting. This is
> just the tip of an iceberg, in a deep huge ocean, on a
> planet called earth that circles a sun. In the milky

> way galaxy containing billions, and billions of even
> more just like it, in a universe of universes that are
> bigger than forever. Of such immense girth, mass and
> energy, it can all be found alive and dancing in the
> period at the end of this sentence. Da Da! You don't
> really believe in all this now do you? How did you do
> it all like that really? You are now officially born a
> fool among the fools of creation. Thank yourselves. We
> win. Now I can get some much needed rest, by putting
> faith in you to help ourselves up. By waking up and
> smelling the coffee. If you now know for almost certain
> that our entire human civilization is being directly
> used to kill innocent people, including your neighbor,
> by a handful of the the most vilest excuses for hell
> barely living, scared stupid and shaking, shouldn't you
> have already something to say to your congressman, or
> getting the facts on CNN especially. How long must we
> tolerate this abuse by taking our crime. Or are you
> just a lily livered coward, who blames me for your
> excuses for killing yourself. Or making fun of others
> who are thinking, while lashing at who ever they tell
> you to because it's easier to play the role the nazi
> bank buildings and disorganized crime has you in for.
> It is safe to say, we, the people of all nations, are
> now officially the good guys and only one last step from
> calling ourselves the worlds saviors, by just counting
> ourselves in to help our politicians. Does this now
> mean we are better than those who would think that we
> were not? Things that make you go hmmm... As for the
> rest of ya, carry on as you were. Yawn. Then if by
> some unforeseen moment we find ourselves at an end, in a
> far distant future or tomorrow, alone without nothing,
> ourselves or any friends. Never ever being here or
> never ever even then. I'm sure it would be to a great
> big bang of laughter for being so foolish and not the
> wiser. Then maybe we would cry for nothing, laugh at
> our expense for listening, and start the whole thing all
> over. Only this time it would be funnier. I'm playing
> Jesus Christ for real! With the crafted success we have
> coming from our art departments, maybe all we have to do
> is make sure everyone knows their basic arithmetic and
> encourage politicians to sing or play instruments during
> recess. Just might work. This mythical journey of self
> discovery is based on the dreams and aspirations of
> others, where the only thing holding us back is
> ourselves. If there is one thing we can all be
> absolutely sure of, it is that the true spirit of
> mankind shall prevail. \ \

--

One More Thing

So, that demon bush, the American cop killer and his
cohorts, are continuing to work destroying Humanity's
gains in civility, by evilly dividing Our humanity with
their blatantly open criminal intent to murder untold
millions as US innocent, and as of yet, have not been
executed by American Patriots for mass murder of God's
Family in New York City. Traitors to US all on 9/11
without contention, for Our truth speaks as Ourselves,

and witnessing just CNN's silence on General Ahmad, speaks volumes on their contempt for US as worthy of Justice. Refusing to do what is good for Humanity by offering the central facts as publicly recognized by Our Police Agencies to be actually documented. According to the FBI: the vacationing General Ahmad financed the alleged 9/11 mastermind, Atta, and also developed the criminal war strategy against Afghanistan with the bush administration, to boost the heroin trade, and save Enron to commit further frauds against American soldier families, while murdering over a hundred thousand American flag wavers, and then leaving US for further ruin with plans to continue on against 59 more countries in the same deceitful illegal manner against all Churches, as an evil nothing short of eternally crowning Our Mr. bush Jr., the super evil anti-Christ, the most hated and despised parasitic murderer in the entire annals of Humanity's History. Cool eh? Kill bush now! Why?

The bushmob have done nothing short of confessing to the entire terror event, but for jokes on our strained credulity to publicly press for further stalls. With the rights of kissinger left to be a public investigation official? (Gee, thanks for highlighting your partner like that for US bush, you nazi dumfuk.) Mr. bush Jr.'s america destroys themselves without Love for wisdom, or respect for intelligence as a Peace plan initiative. We publicly witness the blind and tormented dying bushmob slave whore charade, of contempt for living free in Our names. The two evil doers, bush and sadistic nazi rotten rumsfeld, are known publicly as documented, to continue leveraging the ignorance of the CNN ready to be broadcasted repeatedly, tranced dimwit marines, the true dumfuks of this world as weak and pathetic cowards to themselves as their own brothers they watch murdered for bush helplessly, communicated in CNN's un-American false image as the evil bush nation hiding in falsehoods as death squad recruiters against the practically defenseless as unarmed children, nazi vermin criminals, being unbiased as Blitzer about protecting your freedom Patriot, to lose your real life savings reader, truly too weak and stupid to stand up in protection for the flag as the living American Dream for anyone. Because witness again, CNN keeps not saying Justice is important as principle to hold our reflections.(CrossFire is getting better though.) Fortified behind locked doors in their bombed out bunkers, Blitzer and Hemmer sit rooted for the evil side to lose further to themselves by continuing to not

respond to our communication know how. America, the People, rarely gain press time coverage as should be top priority always, while being paraded publicly as sold out as not deliberated, corporately represented as privately principled to stay ignorant of Justice to protect living personally, as actually worth something to the bottom line. Yours. Brought down Hell bound as cheated by corporate news america's valueless interest in the price of your living to continue on our behalves. What does CNN think of 2% Social Security? cheating a Soldier's Grandmother to pay tithes to the bush demon as criminal dictator?, american nazi death squads?, insider stock trades?, arming bush's heroin partners?, rotten rumsfeld and bush murdering devout corporate cultists like a would be, still silent Hemmer?, no opinion? Or the working for the People in our names OFFICIALLY, as the FBI and CIA officers actually involved in uncovering the evil bushmob deeds, like the warrant sabotage, Odigo, stolen passports of alive so called highjackers as once American trained as still Saudi pilots, or Anthrax made to look Muslimized, is not failure to connect the dots ever, or insufficient funding then is not less payment for our law enforcement now to nab the prime suspects. As Mueller, or mueller has not publicly commented of, but to say, he hasn't seen or heard anything of this police work, leaving the FBI unrepresented publicly as a threat by himself as a terrorist supporter, an devout member of the bushmob cartel. Why?, we must investigate Mueller if we should have him arrested for publicly obstructing the FBI asking the important questions. IT IS THE FBI, not pissant mueller, WHO CONCURES THE BUSHMOB'S AHMAD FUNDED ATTA. Or how about the dumb ass Ashcroft assault against every American to save his embarrassment of being completely unqualified and never elected?, no concern to mention on this either? Who suffers for CNN's refusal to demand Enron give back the billions that were criminally stolen from all American Families still sitting in the Cayman Islands? My God.

Somebody call the cops.. again!

I have personally spoken to hundreds, and written thousands regarding bush's guilt, and we can't seem to find any fault with what I am saying... How about You? Check out usenet group, "us.military.army" on the internet to see for US all, what questions if any are asked. Know also, CBC and CNN management staff will not contribute their disagreement as none present, but for continuing disregard for Your interests during Our news cast of the facts. THINK. I tell gun clubs, police

officers, Biker gangs, and the general public to kill bush today for 9/11 and his death squads, against the helpless and undefended while arming heroin dealers and selling terrorist handbooks, with all the evidence one would need or asks for, and CNN with CBC corporate management does not, to my knowledge, call Our Police agencies to complain about my free speech capabilities, or will allow US public discussions with Our History as documented. Why? Those nazi bastards, Walter Issacson, Robert Habinovitch, and the two Coast to Coast godless vermin parasites know personally, they propagandize our communities with deceit to keep us divided as the plundered and murdered for the private banker buildings who sell weapons in bush's name to kill the innocent as ourselves unheard from. I can barely survive watching US ignore them as King to this World, my sweetie baby sugar dumpling, but, I think it's time to let Arron Brown in on a little secret... Johnny wants a word with his living responsibility to Americans on Patriotism. Instead of what we currently witness, a reluctance to not relentlessly pursue the truth to provide US the facts, (Look, it's true, Johnny has an ass.) but a censorship of control to falsely prop up the unelected nazi war mongering criminal, Our Mr. bush Jr., a terrorist of tyranny through criminal impropriety in violation with the American Constitution as a death bringer heroin dealer, at a seating that truly holds no vacancy, nor a Buddha, but a deception to plainly hide, the actual, got to be for real, super evil anti-Christ of all religion ever mentioned. Wow eh, even gentle jolly Buddha wants bush squashed! Seriously, please kill the bush demon to save US as victims friend. Justice must prevail as is truth eternal, that of what will be as God is.. just how many more as Humanity will be sacrificed in cowardice for the evil bush demon, before an American Patriot kills the mortal nazi dictator for treason as an American cop killer, and betrayer to all of our Humanities? Don't let tomorrow's news story be about Your murder as another, no longer heard from bush victim. For, my reason is as evidenced to actually be known, easily, while the CNN corporate cult product lies to themselves as Our public fact finders to leverage more ignorance than is found now.. as Our public voice to suffer by criminal dictates to destroy God as life giver. Fuk you america.

Heaven is on the Horizon.

We can teach ourselves as the uninformed by CNN standards to misinform and ignore. CNN's continuing silence on Ahmad, bush and rotten rumsfeld, only

supports further our claim in their contempt for American Soldiers, and Our Families as not represented as worthy business investment. God, don't you just love me? Hemmer?

Mr. bush's publicized war strategy of no evidence requirement to hold American convictions for murdering Ourselves is evil all around everywhere, as understood without question to every honest Cop, the most serious of all criminal behaviors, of which, they carry guns for in just this sort of political development to halt reoccurrences. But bush, the anti-Christ, as america, says no for ALL Americans, they can no longer hold onto Justice as their own with him in their charging everyone as the enemy bush refraction. Just like, "bomb wherever" tommy franks would do with his own American family death squaded, like he did intentionally to our children, as his contempt for America will never stifle our voice with his silence regarding our aimed veracity to seek out and destroy the evil nazi bushmob fuks individually with God as Justice Supreme. The True American Way, for, the rare and few Marines, the one or two, are with US loyally to know so. See, there was a time when the Marines were taught diligently, so much so it was proudly ingrained as the moral fiber of their character, that an American Soldier's responsibility to America was to defend the Constitution as the Freedom to be America, with their lives if need be to protect their soul brothers as family, for the greater good by God, (just like the Taliban Rule Man) while today, Ashcroft, albeit muted, murmurs as rotten rumsfeld chuckles, Americans must instead as slaves give their lives unthinkingly as cowardly evil war criminals to protect the unelected bush mobster from criminal arrest for mass murders in New York City, and stealing that 50 billion, seeing that that stupid Justice thing in the American Constitution and Bill of Rights idea has now got to go instead of evil bush as demon traitor war monger, terrorist recruiting false god anti-Christ, but that aside... There is a guide book for leadership in the American Marines entitled, "Guidebook for MARINES", and inside, it contains 14 principles to strive for as an American Soldier wanting to be a True Patriot as leader of Soldiers prepared to die for love of country, and our fellow man as friend or stranger, and here they are:

Integrity, Knowledge, Courage, decisiveness, Dependability, Initiative, Tact, Justice, Enthusiasm, Bearing, Endurance, Unselfishness, Loyalty, and Judgement.

For integrity it states:

"1. Integrity. The stakes of combat are too high to gamble leadership on a dishonest man. Would you accept a report from a patrol leader who had been known to lie? Of course you wouldn't. All your statements, official or unofficial, are concidered by your men to be plain, unadorned fact. Make sure they are. When you give your word, keep it. There are people depending on you to come through with the goods."

Now, I could go on further about what kind of lifeless degenerate a lawless cowardly mute soldier in bush's nazi death squads would have to be, to serve under bush as slave and traitor to home and family, as against God, the Flag, and all that we represent as equals through Justice, but I won't.

Mr. bush's america is uncontrollable by anyone. CNN figures if they never mention US, we'll never know who was invited as participators. (Example: CIA officers have had to PUBLICLY contact British News Services as the CIA, (Never done that I know of likewise before), regarding American interests in apprehending the TRUE 9/11 culprits ignored by american corporate dictates, and tenant also. One should remember, bush and rumsfeld would want to secretly murder any persons involved in 9/11 to clean up the huge crime scene, and tenant, is no brave and True Christ like figure as a living person, so what can we expect in all reality? Tenant will pay dearly if the evidence further indicates, as his continuing silence does label him already a willing traitor to all America, as too, his personal meeting with 9/11's Ahmad just prior seems suspicious also as not mentioned by himself in defense, along with his refusal to disclose the insider stock trades while leaving the fine CIA officers personally involved in the dark, as abandoned American Patriots, armed and ready to defend America as they should immediately for themselves, by executing bush and rumsfeld as terrorist cop killer, drug running freedom haters.)

America's false deity, the super evil anti-Christ, Our Mr. Bush Jr., doesn't think for me to be sacrificed without opinion by John, for I am free to act for my own beliefs as understanding, as I live in defense for living as all things created I am of honestly, simply amazing God is. However, I, as any truly living person would, can't help hate Our Mr. bush Jr. to death for what he and rotten rumsfeld is criminally doing, and further proposing against Our living in my name as unheard from dying without cause as murdered, but for

bush's criminal contempt for my Awesomeness to beg once again friends, someone out there please, for the Love of Yourself and God, help US destroy Our Mr. bush Jr. quickly before he kills more as Ourselves unrepresented by corporate values in our commitments to freedom for living through Justice for all persons. Our Mr. bush Jr. has indiscriminately murdered more than 100,000 innocent souls with only a contemptuous smirk to his credit, while fully committed to more robbing and heroin dealing by blaming Laden for whatever without any evidence. Leaving Our true willingness silenced by corporate demands to propagandize and censor our truths, allowing bush, the dumfuk traitor, to continue demonizing America into a hell hole of ignorance through his hatred for life, Science and Nature. CNN's silence for America regarding the bushmob publicly stealing from their Own Family their freedom of Rights to be living, while committing Americans to a dictatorial crime ridden government, that bush and rumsfeld proclaim, is no longer applicable to the Law of any Land, is an abomination against Christ as living is Ourselves Being. America isn't America anymore, it's the bushmobbed universe of injustice and blind self hatred against all of Humanity, committed to leave none to survive but as slaves to be terrorized for the dummy bush demon as their false deity, a traitor in my midst, disguised to no one but himself as personally expendable. Again, where are the American Patriots we all hear so much about in the big screen to take down the seriously anti-American demon bush monster cop killer heroin pusher for treason, as all understood widely now factually with evidence and everything? Kill the war criminal evil doers, bush and rumsfeld today and be loved by yourself to be of Human Nature, or hunker to hell as a coward and betrayer to yourself and your own family, while watching the bushmob openly rob and murder further from our World, and on all of which we stand strong united. Justice for You.

This living plan of mine empowers others to learn their Rights as eternally established to be Kings and Queens on equal footing to be as all in all of gods forever dreaming, while demon bush intends the destruction of individual freedoms while robbing and murdering Americans from the inside, like sharon with US Jews does, as underrepresented, a condemning onslaught on Your better Judgement as reasoned on anything factual they figure blindly to be spinable, without your word contested. Your God Given Living Rights my friend. Without a rule of Law principled in the fashion of

Justice for all to be sought as measured, bush's nazi amerika will continue to suffer ourselves needlessly for their corporatized self contempt in Our living Humanity as censored, without a thought for Justice, or the American Bill of Rights as God acting out eternally for prophets to wonder endlessly. See, I came up with this wacky Idea one day to make all my equal as self created to be so normally, in this Universe as we exist for Happiness ultimately as eternal, so, You or i will work this challenge to speak out for ourselves as Creation about bush's america, and it's responsibility as publicly advertised, to gather the facts on who suffers for bush's criminal misdeeds, and overall ignorance on everything. Mr. bush's irresponsible tax scam for example, is to put America's public money into the hands of private bankers, as the extremely rich already, while taking money away from those who spend the highest percentage of their paycheck on basic necessities as a gambled to be advertised, "stimulation package". HOW? The HOW is never explained with understanding as clearly regressive like the bush rule is, because.. Who spends MORE in taxes as investment at the grocery store to pay the cashier for his babysitter: 20,000 volunteer Janitors all named Rich, who ride the bus for convenience, or a mechanical billionaire private bank machine operator, who doesn't earn any nation's moola by working something for it?, and couldn't eat 20,000 cans of re-fried beans at one cruise lining to timbucks three without losing themselves, havening his tax manner over take in YOUR luxury. See, when America prints more money at the Treasury to give Greenspan to loan BACK to the Government illogically, the dollar value falls for everyone as investor, inflation, let alone the incurred bogus debt owed with real sweat as labor. Clearly, to every informed citizen not as democratic. Of course, National corporate news America, is genuinely not trying as capable by themselves to commit The living interest in Government as ourselves with oversight to manage US fiscally responsible, (like CNN regarding Justice and the Congress, or no Chomsky ever, E. Ann Clark as geneticist, or just research for experts as example), so, we do indeed, live in trying times due to ignorance as corporate america's disrespect for wisdom saught as yearning. It's like private bankers don't want the public to think about what we are doing as worthwhile knowing, eh? Or, I'm the only one on this planet who can almost read my own writing as the, one of a kind, good boy God freak. Anyway, the bushmobster scam leaves less finite wealth for all as taxable exchanges, while suggesting disposing of what dwindling national resource

can be obtained, be given to create further debt by devolving into a military apparatus to make more enemies. Our Mr. bush Jr. is just plain stupid as destructive to everyone, but especially Americans to not stand up in defense of Ourselves. (Officially, rotten rumsfeld's criminal plan, "P2OG", is to encourage terrorist acts against Your Family, but you guessed it, not up to CNN's standard to report US as viable news material.) It's like saying fewer people educated, will keep us stupid enough as a Nation to blame the weak and poor as ourselves deprived till death as murdered, and, bush says makes sense secretly, as the all knowing for the blind and ignorant to faith in without thinking about what money is either. Our Governments should always be working to make the poor richer as a successful representation of our will as the public to improving our living condition, but the dumb and ignorant, talentless and monosyllabic, believe, someone else must be cheated and devalued, divided and murdered, in their universe for them to succeed without effort, or skill whatsoever.. Especially defense. Have you ever heard of the rock solid certainty of Universal "inverse variation" constants? (Canadian High School.) This is why in America, in a time where the nation was more literate as informed, Corporations were taxed at 85% and were happy about it for themselves as American citizens. It's understanding also, most as almost all of the most wealthy multi-nationals competing from military dictatorships against American minimums, run in continuous private bank debt, (your savings and pension as leveraged weaker being the entire Nations) but gross billions in profits. 99.9% of every private bank building in the Western World is mortgaged, not however in Iraq, or the Muslim World where interest is not charged on good standing loans made in Our names. (Sideline: Now recollect bush's puppet forcing Afghanistan to borrow from the World Bank for terrorist handbooks and heroin junkets, but not food, shelter or clothing, while spending in addition, 4-5 billion a month in godless bushfuked american Patriot Dollars, American Celeb Dollars, American TAX PAYER Dollars, to run deaths squads with tommy franks against teachers and children.) It's a strange idea to the dying to be corporately driven without thinking because, you wouldn't automatically think it could be more profitable to stay in cheaper as serviceable debt being a brick building, but it is by private banker swindle with National inflation succeeding personal interest rates. We lose personal wealth to the pirate banker fees without even privately using their/OUR National currency

services, because truly, we can't go somewheres else. As of course in america, an Enron can always be pulled, where it goes bankrupt as a toxic non-living entity, but leave richer as crooks than they did before calling an end to paybacks, with the People stuck to take the loss together for sure as the victims. While bush, says corporating America, his america, should learn for next time, maybe, while the CRIMINALLY STOLEN money is still siting in the Cayman Islands!!! See the Depression, a Canadian High Schooler, or watch bush act in direct opposition to his word almost consistently as American death harborer terrorist psychopath. Then ask yourself, why can none of our defenses be publicly discussed as important deliberations?

Love Justice by allowing others to read this paper, to judge the truth for themselves as worth something for all persons, and I will be truly grateful you cared to believe in a better future, for together, we could find a new hope for freedom, as happiness and prosperity for Yourself included. We only need believe in ourselves as unstoppablly stupid, and the Universe is ours as God is now testifier.

I am my word,
and make believe King to this world I call home,

Yours forever,

Johnny Wizard

Frank I have been reading the various posting in this thread. And some of the posting here disgust me. Why do some of these people call themselves American's? America is supposed to be the land of the FREE.

By far, this posting by you is the best.

I have read most of the articles in the second web site you listed.

It's about time America wakes up. The world doesn't revolve around HOA's or there darn rules.

As a veteran I have flown the Stars and Strips at our home since I returned from the military (35+ years ago) and will do until I expire. I, unlike some in this thread are proud of my country. I am proud to fly the Stars & Strips over our home. I am proud to have served in the military of these United States of America.

I am also proud to have served in the military only to protect the rights of HOA's and their over baring officials, to forbid Americans from flying there FLAG on a poll erected for this purpose only. And they call themselves patriotic Americans.....ya.

I see that no one wants to respond your post Marylou.

It's my opinion that you must be on tract.

America will only be FREE as long as real Americans allow it to be. And presently that doesn't seem to include HOA's or their officials.

Yes, what are AAA zoned areas? I haven't come across that term before.

That's for sure.. :(if this keeps up, then the simple act of operating a pirate station in the US could become a capital offense under the Patriot Act.. If you think this posit is a bit extreme, read the Patriot Act, and Patriot Act II.. it takes very little to be named a terrorist these days...

Look, even the IRS is using the Patriot Act now....

The IRS Claims New Patriot Act Type Powers to Punish Political
Dissenters

In a precendent-setting case, the IRS wielded new power to punish the
political speech of those who "espouse views" the government considers
"inconsistent" with government-held beliefs. In a hearing originally
closed to the public in a secret tribunal on a military island, but
moved to a public location after protests from the press and the public,
the IRS wants to wield this power against a former IRS whistleblower,
who was forced to resign upon his discovery of fraud in the agency.

After monitoring and taping the whisteblower's appearances on Sixty
Minutes, talk radio shows, and political publications where he
rebroadcast his findings of IRS fraud, the IRS initiated this
inquisition against their former whistelblower. This new power may find
new political targets soon enough.

The IRS, through the small office of "Director of Practice," claims the
authority to wield carte blanche authority over all the other powers of
government -- the authority to monitor, surveil, and eavesdrop on
political dissenters, the authority to pry into the private financial
records of banks, businesses, and taxpayers, the authority to conduct
secret investigations under a criminal grand jury, and the authority to
censure political dissenters by branding on them a badge of infamy and
stripping them of governmentally- protected licenses. In short, under

the guise of a "practice" investigation, the IRS claims the right to wield all intrusive and invasive powers of government available...

A "license" to practice before the IRS -- even for people who have never requested such a license or actually practiced before the IRS, but are given one as a matter of law if they are accountants -- "licenses" the IRS to conduct private audits without notice to the taxpayer, confer with criminal prosecutors without disclosure, and bring special "disbarment" proceedings against disfavored dissenters, even if the alleged "disreputable" conduct has nothing to do with any "practice" before the IRS.

The IRS now claims it can use these so-called "practice" investigations of anyone who Congress licenses to practice before the IRS -- regardless of whether they actually practice before the IRS -- to surveil the public appearances of dissenters, eavesdrop on the political conversations of dissenters, benefit from secret grand jury investigations, hold secret conferences with the criminal investigators, surreptiously tap the private database of taxpayer information, including taxpayers who merely have some financial "connection" to the accused, audit the political dissenter's personal financial records, and use all this information against the dissenter in the "practice" proceeding.

Under the guise of a "practice" investigation, the IRS can ignore all the normal procedural protections against an illicit audit while it conducts such an audit. Simultaneously, the IRS can ignore all the legal protections afforded a person accused of a crime while conferencing with the people conducting a criminal investigation. Indeed, the IRS can even ignore the sunshine laws, as the records of such "practice investigation" are exempt from disclosure under the Freedom of Information Act, as are grand jury proceedings.

The IRS claims it can exercise this authority in a secret proceeding without allowing a person the opportunity to cure any alleged mistakes, the opportunity to prepare a defense by knowing the exact facts they are accused of, without any opportunity for discovery, without any opportunity to call witnesses necessary for their defense, without any opportunity to cross examine their accusers, without any opportunity to testify at their own hearing about the merits of their position, without being forced to testify against themselves without such an assertion being held against them, and without even an opportunity for a hearing on the evidence.

This power of this little office with a Napoleonic vision goes even beyond the Patriot Act type authority and stories of FBI monitoring of war protestors.

Too Hoover-ish to be true in modern America? Just read the case of the IRS against Joe Banister scheduled for a "hearing" -- a hearing where the IRs prohibited Banister from introducing any witnesses or presenting any evidence as to his defenses, and even discussing the sincerity, the

truth or the "reasonableness" of his positions -- on December 1 in the city by the bay, in the Tax Court chambers of the federal courthouse in San Francisco. History is being made.

Question is, If HOA's object to the, "Land of the Free, and the Home of
the Brave", why don't they simply move to another country (like Cuba)?
I've had a long life and careers in TX, CA, and AZ. I have *NEVER* signed
on to an HOA agreement, and I never will. If one freely chooses to compromise
one's principles, then one gets exactly what one deserves.

It floors me how some Americans can defend the loss of the principles upon which the country was founded, and for which our troops are supposed to be fighting. As a country, we do great dishonor to those who have died to protect our freedom by giving up that freedom voluntarily under the guise of personal or financial security.

Stop taking a position OUT of Context. The new owners were/are not hams.
But the tower and antennas are in my new backyard.

Restated, the tower had NO IMPACT on the selling price of the property!
The property sold based on LOCATION. I had lived there for 38+ years
prior to sale. BTW, the home across the street and the home next door
also sold for above market value.

NO the realtor did not make any recommendation regarding the antennas at my home. [See previous posts same subject]. The antennas were up and operating until 1 week before the movers came and bank closing.

You are still making generalizations that are not factual. Please give the name, city and circumstances of those realtors who say 'take them down prior to sale'.

You persist in making generalizations that are not supported by facts.

In Florida, USA, last month, the national news [Good Morning America, ABC TV] reported that a military veteran could not fly the USA flag because the pole violated HOA rules.

What's more the Florida courts supported the HOA!!!!

Exactly!

Looking through this thread, I see (time and again) that the people that are either mistrustful of HOA's or outright hostile to the idea of them don't live in an area with covenants and HOA's.

Good!

Having read some earlier posts by some of the people posting that are the most dead-set against the idea, I know of two that actually live in mobile homes. (Great post on how to get good AM signal inside the metal shell, BTW). I have nothing against house trailers -- I rented one for two years when I was in college. However, I do think SOME of these posters are hardly authorities on keeping up property values in upscale neighborhoods.

In this case, one size doesn't fit all -- HOA's are most definitely NOT for everybody -- particularly people that think that rules should apply to everyone but themselves. However, just because they're not a good fit for you, doesn't mean they're not a good thing for others. Don't like 'em -- don't move here -- that simple.

I chose to build in my particular neighborhood precisely because of the covenants. We built the third house in our neighborhood, and we needed to be sure that the rest of our subdivision would be comparable homes. Six years later, we've got a great neighborhood and our house has increased in value substantially.

Your mileage may vary.

My impression is (I only own and use a 92 and have observed others
using a 95) is that the 95 trunk tracks better, but the CTCSS and DCS
feature of the 92 makes it a better conventional scanner. Unless you are
in the "fringe" area of a trunked system, I think I'd opt for a 92. You
might check and see if the 92 is an original model or an "A" or "B"
spec. The "A" or "B" variants are better at trunk tracking than the
straight 92. In either event, get Don Starr's software (Win92 or Win95)
and a cable and load your freq's and alpha tags via the computer.

Now that you have Win95n is there a way to save the frequencies
loaded by the store? And that's a good idea the ask for a print out
of the frequencies! Dose Win95 support a print out if the files you load
in the scanner?

Another way to do a pint out is by HAND :
open a blank text editor on the computer and make your own list,
by stepping through all the memory channels and typing out
the channel number, frequencies and user information!Or just do this
by long hand on blank sheets of paper!

Um, not exactly. If a neighborhood were to suddenly enact some sort of HOA,
I believe any pre-existing antennas would have to be "grandfathered" in.
Hey, I
moved in next to a cow pasture that was in the city limits.
Now some 4-eyed wimps would want to try to make the
farmer get rid of his cows. Couldn't! When the city
annexed the neighborhood, they had to take the cows too
.....they refused to MOOOOOOOOOOOVE! (Sorry, I had to do that). The
cows stayed. Good neigh-
bors, too. Remained until the farmer died and his sons decided to sell
them. Now, they just can't put them back, tho.

Of course, the solution is NOT to move into one of those
HOAs with the blue-haired lady telling what color to paint
your shutters. Once you do, you are stuck. Kinda like those folks that
move in next to an AIRPORT and then
expect to get PAID because of the noise. I have no sympathy for them. I
choose NOT to live in such a place. And I get all the convenience of city
living and the
atmosphere of the country: a grassy meadow (former pasture), lots of woods,
dead end street, close in, yet
very quiet, deer, owls, geese, foxes, and raccoons--which I could do
without, BTW. AND all the antennas I
want!

Jim, yes you can save the Freqs. loaded from the store into a file using Win95. Unfortunately in my case I over-wrote that store load while learning to use the Win95 tool. I can't see any way to print out the banks from Win95, but maybe somebody here knows how. You could always just toss the Win95 files onto a diskette too if you needed backup. I've seen mention of using an excel spreadsheet and cutting and pasting into Win95 from that. I think I've recovered most of the local Freqs I needed between the RS printout and visiting several websites listing local Freqs.

Basically speaking, it is the true reason I live where I do. I have a problem being told what I can do or when I can do it on my own property. It doesn't mean I am disagreeable, it just means that I do believe in freedom and the right to have and hold property as one sees fit--
within reason, of course. I believe that most people will
take care of their property without coaxing. I also believe one must choose the neighborhood carefully and that can
be judged by the surrounding houses. In better neighbor-
hoods, one simply doesn't see pink/black houses or bright
red houses. I do NOT believe in covenants, and I avoid them. It's not a problem since I have lived in the same house for 17 years and I mow the grass, paint (well I
put on siding some time ago) and recently paved the driveway. Yes, I have a 70 foot tower and a VHF beam.
The dipoles have long blended in with the trees so you have to be looking for them. I get along with the neighbors as well.

Now, if a new neighbor comes along after all these 17 years telling me I "gotta move them antennas", I would have to reply "By whom and whose army".

Jerry

Well, I've had both, the 92 was ok at best, but the 93 (pretty much the
same as a 95 with less channels) is a great radio. The 92's (I actually
had two one was brand new, one was used) both went back.

The later ones are much better.

When I lived in Coeur d' Alene a few years ago, there were the beginnings of a fight between homeowners (not aware of whether or not it was an HOA or not) and radio station KGA in Spokane.

When KGA went on the air something close to 70 years ago, it's transmitter site was miles from town, and in the middle of a very rural area. Well, now the area has built up, and the homeowners there are trying to force KGA to move it's transmitter site and towers. This is not a small undertaking, since broadcast stations are very restricted as to the areas that they can place these complicated multi-tower systems, and very strict directional patterns.

For me, I don't feel a bit sorry for those people, they knew there was a 50,000 watt radio station there when they started moving in. So did the developers. KGA should not be forced to move because of some people's ignorance or short-sightedness.

[message to all here] What amazes me is the shortsightedness of Republican voters. Even if one believes George Bush, Tom Ridge (head of Homeland Security), and others are absolute angels that would never abuse these powers, one should realize those powers have also been handed to Democrats and anyone else who manages to get themselves elected to office in the future. How will those people, and future Republican office holders, use those powers down the road? Can we ever be assured such massive powers will never be abused?

Sadly, Republican voters don't seem to realize this - which is why I use every opportunity to point it out (hopefully others will too). Bush, Tom Ridge, and others, are going to seek more powers in the future. They're certainly not going to stop now. If Bush will not stop this grab for power, he needs to be out of that office. The same with those in the House and Senate that voted to allow it. All Americans (Republicans, Democrats, and others) will be affected and all must join together to stop it. When that is finished, we can then work to roll back those powers (if successful, look for this in future candidates).

NOPE!!

They had the choice to move there or not. Just like idiots
that move in right off the end of an airport runway, then
howl about the noise. They want to be PAID because of
the jet noise. They KNEW what they were getting into
before they moved there. As far as I am concerned, they
ought NOT get one thin dime from it.

If I move into an HOA, then I should shut up about it and
let the old buzzard power-trippers tell me what to do. But I STILL have a
choice to not move into such a place.
I am too feisty and independent to accept domination. I
believe property rights must remain dominant; i.e., your
rights end at your property line and mine end at mine.
Of course, there has to be some reasonable limits, but
what color I *must* paint my shutters? Horsefeathers!
Most neighborhoods "conform" simply by osmosis, or
peer pressure. Most people are likely to keep their property clean and
clutter-free. Most people tend to
flock to what they can afford and you will find that neighborhoods tend to
catagorize themselves; affuent,
middle class, lower middle class, fair, poor, poor-ER.
I think HOAs are unnecessary and I will NOT accept them; those puffed up
self-important busybodys will have
to kick my **** first! So the obvious thing is to just stay
away. I am perfectly content in my 1956 ranch w/basement with the
fireplaces/inserts, garage and double
carport/deck, real plaster walls and knotty pine kitchen.
The geese that reside down at a woods nearby are an extra. OH, my house is
built FAR better than most of the

houses today. During Hurricane Hugo (1989) many of those "fine" houses in my area were blown down like the
big, bad wolf. I lost shingles. Nothing more. 96 MPH
winds.

So, with this unintended rant, I say that I have no sympathy for those "neighbors" that moved next to a pre-
existing condition and----well, TOUGH! They shouldna
been stupid enough to move there to start with!! LOL!
Then to have the arrogance to demand that the tower
that had been there for decades(?) have to move, HA!
Again, HORSEFEATHERS! (and a few other things).

Then it would have gone to Federal court where I would've used PRB-1. This
is a federal statute that requires that communities (municipal, county, etc)
make
reasonable accomodation for amateur antennas. I would
bet neither you or I have all the facts you are relating because IF that
antenna had been in place for "years"
as you say, I still believe it would have to be grand-fathered. But because
some muckety mucks move in
after *I* have had a tower for years (17) I must now remove it? Well,
they'll have to show me the hard way.

Eventually, the comformity crowd just may have to stick out their lips and
bear it, because there is an antenna bill
before Congress that *may* cause the blue-hairs heart failure! It will mean
that HOAs will have to make the same *reasonable* accomodations as local
governments.
Why? Because Amateur Radio is considered a part of America's communications
infrastructure and has been proven a valuable asset. While it is, foremost,
a hobby,
many people never consider will happen when towers fall,
a tornado strikes, or even a forest fire strikes. Those yuppy cell phones
aren't worth a tinker's dam (no, not 'damn'), your computer doesn't work
without power or
phone lines, and what's left? Ham Radio, *some* ES
comms, Civil Air Patrol, et al. And who will cry "foul" first? The same
air-headed HOA people so hell-bent
to get rid of "ugly" antennas. The same ones that will
scream "I WANT MY PHONE AND TV BACK ON"!
"How can I find out if my mother in the next town is OK"? And you,
likely, won't find out! Because you
ran off the neighbor that *could've* helped. You embarked on this power
trip. Das Shutzstassen (SS)und Dummkopten. Ya, Idioten!

And your pleas will be met with exactly what you wanted:

.....Silence

Mike,

Can you confirm that RadioMax will work under Windows 2000 Pro?

I've downloaded Demo v5.20 and have had problems. Also Manual offered
on their webSite doesn't always seem to match Software so I'm
wondering...

Thanx,
Bob

So Jerry, what are you going to do when 51% of the citizens are on welfare and vote that the other 49% (including you and me) must support them. Don't you believe in democracy?

Democracy is no more perfect than the human race. The guys who wrote and approved the Constitution and Bill of Rights knew individual rights could get voted away.

I'm not sure why some Homeowner's Associations have a problem with religious monuments, flags or flagpoles, or the First Amendment rights most of take for granted. The people who advocate such positions seem remarkably shy in public, especially around reporters.

When I first heard of the George Andres case, I thought there must be some mistake. Maybe the reporters didn't get the story quite right and the whole misunderstanding would be cleared up quickly. I was surprised to learn how long this damn thing has been dragged out, despite the

support Mr. Andres has received from the public and the Florida politicians. I was just as surprised to learn that there's several similiar cases out there. Telling any American he can't raise a flag or put up a religious monument on his own property is an abuse of power. Telling it to a man who has served his country compounds the injustice.

I suppose we should remember that a small percentage of us are real SOBs. A small percentage of governments are, or will be, run by SOBs. That's democracy.

That's why I want my government to limited by some sort of respect for individual rights.

Frank Dresser

Frank, regarding your comments on a Democracy I'd like to make a simple observation.

We in the USA do NOT live in a Democracy, thank God! Contrary to what the newspapers say, TV moguls say, the Democratic Political Party says, and numerous candidates for political office say ... We live in a Representative Republic!

A Democracy is the most tyrannical form of government!!!

Deacon Dave, W1MCE

I just bought this one. It's a bit pricey, but the leather is thick and top quality. The hardware is very good, the fit and finish is grade A.

I haven't seen one but I was talking to a California Department of Forestry firefighter last week.

He had a "bandoleer" type that held his walkie-talkie right close to his chest. It had a Velcro strap that holds the radio securely; the bandoleer was infinitely adjustable.

He told me how he had to run from the Valley Center fire to the truck nd back again; the radio stayed right with him!

He did not know where the CDF got the strap, but he did say that he saw variations of the same in several "outdoor/hunting" magazines.

Hope this helps!

Alain...Valley Center, Calif.

>Lots of options to consider.

On a stub cable length as is being proposed, the losses from the
connectors are likely to be higher then from the cable mismatch.
The loss in the Ghz Range from Coax is huge per 100 feet, but
fortunately 3 feet is only a small fraction of 100 feet.

Every impedance discontinuity is trouble, and the fewer the better.

The democracy that voted to end the life of Socrates was
pretty tyrannical. How would you like a democracy voting
to end your life?

Don't work so hard, get a job that is easier and pays less. Get a good
survival location, some guns, some food, etc.. Sit back and watch the
burnoff of useless eaters as it unfolds. It will be glorious.

It all depends on the contract. Only a fool would sign acknowledging CC&Rs and think "no big deal' because some Realtor is spouting shit about them not being enforced or dissolved. If that is said, that needs to be signed and in writing. CC&Rs are not a violation of anyone's rights (those who knew what they were getting into). It's funny watching people decry that they are. It's a damn contract between a person and an association. No one is forced to buy a home with CC&Rs. If that's all that is available in your area, move to a new city or state. If you want to stay, but a Honda and move further away. Everything we have in life is a choice. Some people (hams in this case) make a choice then go whine to their big brother government to 'make it so I don't have to suffer the consequences of my choice!!!" If your not willing to leave and more to a new part of the country then I don't feel for you. You have a choice: Ham radio tower set-up or no ham radio tower set-up. Make your choice, do what you need to do to get it done, and live with it.

I dunno. Democracy usually works out as well as can be expected. It works out well enough that Americans sometimes forget about the potential tyranny of the majority. Having some of our rights written down is a useful reminder.

Getting closer to the truth, but exactly what, besides redundant, is a
"representative republic"? Perhaps you meant to say "constitutional
republic".

I've had similar problems with the ICOM IC R-2
When trying to load a file with free ware into the R-2, it gives a
message,
"ERROR" thatr comes up on the R-2's display. Then after turing the
power off and
ofback on "CLEAR" shows up on the display and every thing in memory is
dumped.

I try to use the application that came with the computer cable,
it will set the "CLONE" mode for the file transfer automatically in the
R-2 and if the file transfer crashes
the memory contents in the R-2 are not lost.

Thanks for letting us know how the in store programming is working out.
I have down loaded a copy of Win92 and looked at Win95, they look like
easy to us applications.
Jim

3427. ARC8600 for RadioMax?

Newsgroup: rec.radio.scanner
Date: 2003-12-03 12:02:26 UTC
From: Bob <rljames@hotmail.com>
Message-ID: <Xns944647ADF3694rljameshotmailcom@208.34.105.14>
Source record: 24279

The v5.20 demo of RadioMax currently offered on their webSite seems to have trouble installing and running under Windows 2000 Professional. Although RadioMax tech support tells me "I have sold hundreds of copies, running on all the Windows platforms including NT/XP/2000/95/98/SE/3.1 etc without problems", my experience indicates otherwise. Another problem is that the online manual provided differs from the Demo software in several areas. So, I'm wondering if the Full Install package might somehow be different from the Demo and work as advertised...

I'm willing to experiment abit to give RadioMax a fair try but given what I've seen to date, both with the software and tech support, I'm reluctant to invest in the developers while I debug their program.

Anyone want to trade current RadioMax for BuTel ARC8600 (software for AOR 8600B)?

Thanx,
Bob

Jim,

I don't know which software you are using for the ICOM IC-R2.
My experience is that a cloning operation will fail if
the radio's batteries are weak. This is especially true for the ICOM
and Yaesu portables which are powered by 2 AA cells.

If we live in a Democracy, Al Gore, who got the majority of the popular
vote, would be President. The Electorial College is certainly not
democratic. The fact that we vote for representatives rather than
voting on laws directly is certainly not democratic.

In a pure democracy, the voters vote directly on the laws. In a
representative republic, the voters vote on a representative who
votes directly on the laws. In a constitutional republic, some laws
are off limits both to the voters and to the representatives, i.e.
inalienable rights (at least until the constitution is ammended).

On the contrary, I have an inalienable right to consume wine.
God gave us grapes and yeast and granted us dominion over all the
plants. Jesus turned water into wine. The US government saw fit
to suspend that inalienable right during the 20's & 30's. Thank
God I was born in 1938.

But you must've not read the entire post. I said that there are moves in
Congress to make those HOAs null and void, and those stuffed shirted old
buzzards will have to
make reasonable accomodations as is the case now under PRB-1. I am all for
it. The control freaks will just have to get a case of the "poochy lip" and
bear it.

For me, I have been here for 17 years--same house, same 70 ft antenna
tower. And a few dipoles to boot. I
doubt that that anyone is going to come along and make me move them. I'd
fight liked a cornered tiger! Then I'd
shoot 'em the bird and move far out into the country on
enough land to have those "Posted" signs on it and de-double dog dare anyone
to come messin' round. LOL!

You can bid on this scanner at ebay.com (item# 3063301960)...its
modified so it gets the full 800 MHz band. I'm the original owner,
it's been a great unit for me but I just don't really need it anymore.

Happy Bidding & Happy Holidays

I use either new alkaline or freshly recharged NiMH
AA cells and have tried Groan's application on several
different PC's also launched from the hard drive and off of a diskette.

After the ERROR message and a loss of everything in the R-2
Shutting down the PC and powering it back up reloading the
application and a fresh file from a 3.5 "diskette it will eventually load up
into the R-2
It's similar with the other application, but the BIG difference is NO LOSS
of existing memory contents of the R-2., when it fails to load up a file!

It seems to happen after opening a file into ether application form a
diskette,
then modifying the file, with a R-2 loader application, then trying to
transfer this new file to the R-2.

Source record: 24201

If your go to the
FAVORITE PAGES over on the left hand side on this site

< http://www.strongsignals.net/index.cgi>

and scroll to "Message Boards' click on TRUNK then
go to the bottom, under the message pain , you will find
a wealth of information on all the trunking scanners
also at the bottom of the FREQUENCY board are links
to sites with tons of frequency information.

When shopping for a trunk tracker radio scanner its
important to find as much information on the systems
in your area that can be monitored with today's technology.

Then match this up to the trunk scanner's specifications.
It's also great to down load a copy of the manual. to review and
study (specifications usually are located on the first several pages
and/or in back of the manual) BEFORE making the purchase and while
awaiting arrival of the scanner.
It's nice to have the manual down loaded on the computer when the scanner
is in hand!!
Get a computer cable and soft ware, it makes programing easy! Back up-save
the scanner's memory contents to disk, once it's set up!

Hi Jim,

I wrote tk2 software for the ICOM IC-R2 and you're
more than welcome to use it. tk2 is free, open source
software.

I use tk2 on Linux, though tk2 works on Linux, MacOS X, and
Windows, too.

You can use tk2 to read the image from your radio and save
it in a file before you write anything to the radio. It
requires a "2-way" level shifter cable, e.g. the stock
ICOM OPC-478,the Purple Computing cable, RT Systems
cable, etc.

I don't warrant tk2, but it won't cost you anything and
it's available from http://parnass.com

Source record: 24209

Very first thing I did was program my local police department frequencies (Rio Rancho PD still using VHF) and set the scanner in the same spot my PRO-94 and PRO-95 used to sit. I quickly found out that the PRO-96 is picking up interference from *everything* in this room. The computer (no real surprise there but none of the other scanners had any problems), the monitor and the TV. Turned on the attenuator for each channel and that seems to have helped, but was surprised at the amount of interference it is sensitive to.

I am completely ignorant when it comes to solar power.

I have a 9vdc 200mA wall-wart for my scanner.

I want to run the scanner off of solar power when I can.

I assume a 12v solar panel will not work, and a 75w panel will be overkill... I also assume that a handful (6 to be exact) of 1.5v solar cells wired together will give me 9v with plenty of mA's to run the scanner.

Has anyone ever constructed a solar power supply for their scanner?

Thanks.

it is alot better to use solar panels to charge an external battery (pack)
then u can use as many as u like! with no worries about over volts & it will
always work!
even in the evening

To power your scanner you could use the 12 volt panels and then a regulator
circuit after them. If you try to use 9 volts , the voltage will change as
to the ammount of light varies on the panel.

bolt thrower <tucansam@whodis.org> wrote:
: I am completely ignorant when it comes to solar power.

Check out http://www.homepower.com

: I have a 9vdc 200mA wall-wart for my scanner.

: I want to run the scanner off of solar power when I can.

: I assume a 12v solar panel will not work, and a 75w panel will be
: overkill...

You're comparing apples and oranges. 12v is 12 volts and 75w is 75 watts ... many 12v panels are 75 watts. There are plenty with fewer watts and some with more. By the same token 75 watt panels come in 12v and 24v versions (maybe others, I don't know)

Besides, like wall-warts, a power supply only needs to be rated at an equal or higher value (in watts or amps or mili-amps) than the device needing power. The device will only use as much power as it needs. So you can run a scanner off a 9v power supply that can handle 300 watts .. if you could find one.

: I also assume that a handful (6 to be exact) of 1.5v solar cells
: wired together will give me 9v with plenty of mA's to run the scanner.

Like regular batteries voltage and mA's are seperate values. If you have a 1.5v solar cell it will handle a certain amount of current .. for the sake of argument say .. 50 mA. Putting 6 of them in series give you 6 volts at 50 mA. Putting them in paralel give you 1.5 volts at 300 mA. It all depends of the value of the cells you find. I doubt you'll find individual cells powerful enough so that you only need 6.

As someone else suggested .. I think your best bet would be to get a 12 volt battery and charge *that* from a 12v solar cell. Get an adaptor from Radio Shack to convert 12v (it'll have a cigarette lighter plug on the end) to 9v. Or if you're handy with electronics get a voltage regulator chip and wire it up properly.

That way you can run your scanner with "solar power" any time of the day or night!

I need to replace my aging but trusty Pro79 with something a little more modern. Its gotta be handheld. Well, it doesn't HAVE to be, I guess, but it really would be nice. I'd like to listen to the local PD, which is a digital system. Any chance of that? I'd also like to listen to BP, Customs, and DHS traffic including aircraft. Is the latter on the mil-air bands? Any chance its not encrypted? I'd also like as much coverage as possible in terms of frequency ranges. And I'd like to be able to plug it into my cigarette lighter and stick a mag mount antenna on it.

I was looking at the Pro96 (no mil-air) and the BC296D (what or the BD250D? what's the difference?)

Any other things I should be looking at?

Thanks all.

I assume you meant for Motorola systems.

If the system is entirely digital with no analog traffic on it at all
then it may use a 9600 baud data signal.

If the system uses any analog radios or talkgroups then it must use a
3600 baud data signal.

On EDACS (GE/Tyco/MA-Com) systems most 800 MHz systems use a 9600 baud
data signal, this is the default control channel and the only type a RS
scanner may track. There are a few Unidens (BC780, BC250, BC296, BC785,
BC796) that track "EDACS Narrow" systems that use a 4800 baud data
signal. These are typically found on 900 or UHF.

Would anybody out there know what the Lunenburg, Ma. police frequency
is. In the past it use to always be 155.670, but now there hasn't been
any
activity on that frquency.

3472. Pro 2020 - Frequency Band Restore ??

Newsgroup: rec.radio.scanner
Date: 2003-12-06 06:45:50 UTC
From: mmmagic@optusnet.com.au
Message-ID: <efb79650.0312052245.14cdc4d8@posting.google.com>
Source record: 24225

Hi All,

I have a Realistic Pro 2020 Scanner, but it's an Australian/European?
model,
so it's bands are:
66-88 MHz
108-136MHz
138-174MHz
410-512MHz

(oddly enough my manual shows it having the 30-50mhz band, although
the sticker on the rear of the scanner displays 66-88 instead).
I realise the USA version has 30-50MHz instead of my 66-88MHz band
(vhf low).

Does anyone know how to restore/reset my scanner to get the 30-50MHz
band??

I'm sure with these OLD scanners it was just a matter of cutting a
diode/resitor/track (or replacing it) to alter the band limitations
between various countries.

Feel free to email me directly at " mmmagic@optusnet.com.au " as i may
not read thru this group too often.

Regards,
Marty.

Move to NC! While I am sure there are HOA communities as the population
grows, there are still plenty
of older neighborhoods with excellent homes without HOAs here in my state.
And I have never had trouble finding a place to live without 'em. Once
checked out
a neighborhood in my town called YorkChester. Many
older homes of many styles and sizes. It had been desig-
nated an historic neighborhood and you couldn't even change the style of
your front door without dealing with
the old blue-haired lady with the peepovers. NOPE! I
ain't moving there. But I found a nice place on a dead end street where
such things had never been thought of.
Been here for 17 years.

Maybe it is more difficult in, say, California (the land of
fruits and nuts--dare I say it), but it is still possible to find
antenna-friendly places to live if one really wants to.

I have no sympathy for someone who moves into such a place where
restrictions exist KNOWING it. I am just
fiesty enough and ornery enough not to let someone else
tell me what I can do on my own property. One's property rights should
reign supreme; i.e., your rights end

at my property line, and mine end at yours. Most people
are sincerely enough for such rules not have to exist. The
neighborhood will conform by osmosis or "peer" pressure. If a neighborhood
has junk cars in it, look at the
rest of the houses; they likely will too. If there are mostly
frame "shotgun" houses, the rest are likely to be, too. If
the neighborhood is nice, brick/frame, trimmed hedges, mown lawns, *most*
all the others will be, too. Choose
your neighbors carefully and check for HOAs and coven-
ents FIRST.

Jerry, my daughter lives in Cornelius NC, (which is as you know just a
few miles north of you) they have an HOA but it apparently doesn't mean
a darn thing.

The neighbors are moving into $220,000 new homes, they put up metal
sheds chain link fences, etc. which both are against the HOA rules. NC
is no different than any other state, they all have the dreaded HOA's.
From what I see, the HOA rules are only enforced when some damn nosey
neighbor want's to put there nose into your business.

God Bless America for our Freedoms, where ever they may be.

Same where I live in Raleigh NC, only enforce these hoa rules when it is convenient.

Case in point, somebody put in a pool in backyard, not allowed in hoa and county rules,
homeowner stops paying hoa dues, hoa filed lein, homeowner filed lawsuit.
His/her rights of due process were violated.
Homeowner collected over $ 350,000 from our hoa, the insurance only covered $ 200,000 and we the rest of the hood had to pay up with increase in hoa dues.
Homeowner sells house and moved out. Did the hoa board learn ? no !
They changed rules so now you need three signed complaints from separate neighbors before
the hoa will look into anything.

One guy rides a mobility scooter and he takes photos of anything he don't like to see.

I can't move out because the homes are too expensive here and almost all have hoa stuff.
I could move out of the county to the country but the commute and schools are a factor.
hoa rules not problem for me, nobody can see my antenna and if there is a contest,
I put them up and take them down a day or two later.

3486. General purpose whip for scanner + ham?

Newsgroup: rec.radio.scanner
Date: 2003-12-07 02:14:52 UTC
From: Jason Wagner <jmw@panix.com>
Message-ID: <bqu27j$qj9$1@reader2.panix.com>
Source record: 24239

I'd like to know if there is a general purpose whip antenna available to cover scanner frequencies up to 1300mhz that will also provide adequate servive for 144/440 ham transmission? I realize that I will not be getting an antenna that is perfectly matched for all frequencies. I will be using a license plate mount and I'd like as thin an antenna as possible to minimize wind loading.

Also, I'd be looking for the same in a rubber duck style, 12 inches tops.

Any suggestions? Thanks.

"Bob the Bignose" <6003goths@juno.com> aint finished yet folks!

I nearly forgot!

Go here: http://www.aprilwinchell.com/multimedia/

This is the Audio Blog file for April Winchell's fantastic
web page. (April Winchell is the daughter of the great
Paul Winchell of Jerry Mahoney and Knucklehead Smith
fame)

On this page you can find very rare downloadable
mp3's of the Singing Chickens "Jingle Bells", Mary
Schneider's Yodeling Classics, horrible xian music
like "Joggin for Jesus" and "Menstruation is God's
Plan", as well as "Down by The River Drive".....

She has a very amusing and clever program on
KABC 790 Los Angeles. Baby Boomers like myself will
remember very well the amusing antics of Paul W.
April is just as funny and carries on the tradition.

A Must see. (Much more amusing than 3.947 on
a Saturday night when propagation carries the
odoriferous emissions out West.

And, at the top of the list is the song "Keep your restrooms clean, men"
from the RED LION gasoline company. While I've never heard this
wonderful song during the many hours I've passed listening to shortwave
radio station WINB of RED LION, Pennsylvania, I'd like to think it's a
product of a collaboration of the Reverends Norris & McIntyre. To my
ear they're in a league with Lennon & McCartney, Bacharach & David and
Gershwin & Gershwin.

It is suspose to mean brand new, never opened just as you would go to the
store and buy one.
If buying it off ebay, it could mean almost anything :-)

I bought it. It is not as robust as the 2003 edition. It was a lousy install. I had to remove the old one and manually install the 2004 to get it to work. It seems to be put together in a hurry. I am a bit disappointed because IMHO 2003 was such a good product. What are your thoughts? You asked first.

Source record: 24106

Hello!

Wow i havent posted here in ages; probably because I'm clueless about most of this; as the following Q will demonstrate.

I own a Radio Shack PRO-2035 1,000 Channel Scanner. hooked it up to the CCrane antenna [the 'lo-tech antenna; if memory serves its two 'tuned' lengths of copper wire that lead into a antenna jack cable. Wow I've lost my terminology-speak! Love the scanner.

Radio Shack is advertising a 1,000 channel. The handheld.

Q: The 2035 is a bit old. What does it have that this handheld does not? I undertsand the obvious things regarding base vs mobile; what I mean is in terms of frequency ranges mostly. And anything else I'm clueless about, meaning anything else you can think of.

Thanx!

I purchased two radios off ebay that were listed NIB (New in Box) and both
came exactly as advertised. One was a Citizens Band Base and another a
Bearcat both out of production for at least fifteen years. If you have
questions ask the seller.

".... I don't trust Ebay." As someone with a feedback of over 400 I trust eBay. It's the sellers you have to be careful about. Use some common sense. Check feedback stats. Weigh your need for an item with the expected cost multiplied by the risk of a "bad" seller and make your choice.

AND don't be in a hurry .. if you don't win this item, they'll be another, and another.

Richard in Boston, MA, USA

That's called invasion of your privacy and harassment. To hell with the HOA, call the police and file a complaint. Make it a matter for the court, put this guy where he belongs. Some of those kind of people don't learn until the financial ball hits them in there pocket.

Also doing a google search and checking the original headers on the authors
and addresses he posted produces results showing the troll assuming the
identity of someone that dared to oppose him and then trolling groups,
giving the immpression that the person that was complaining about the troll,
is the actual troll himself.

OOOPS! Sorry about that. I forgot about Huntersville,
Davidson, etc. Nice area and expensive! I remember when the area was still
country and all those houses right the shoreline weren't built. Could've
bought a house in
the '70's for a 3rd of what it is now. And, also, I wouldn't move in there
for nut'in'--not to mention the
traffic is HORRIFIC on the I-77 corridor. Bumper to
bumper morning and evening--least little fender scraper,
your commute is over!

Let me modify this by say that, yes, there are lots of HOA communities
everywhere. But if you do a little
snooping before moving, you can find older neighborhoods that dont have the
HOA nonsense. I am
just independent to let someone tell me what to do on/with my own property.
And if I catch some bird on
a scooter taking pictures, he better not be on my land!
He comes down my driveway snooping, he just might get
his (*censored*) kicked. Sorry, but that is the way I feel about it. But
I've been here for many years, all of us here
get along well, stand beside the proverbial fence and chat,
borrow/loan tools, and all is well! ...Without any cussed
HOA!

Bzzzzt! Thank you for playing. You have no expectation of privacy in
a public place. You cannot forbid photography of the public areas of
your property.

Russ

Yes, you can. None of your private property is public. Expectation of privacy has nothing to do with the civil claim of Invasion of Privacy. It is only a 4th Amendment doctrine.

You have every right to forbid photography of your private property, much like concert venues and museums have that right, whether open to view or not. To say otherwise would allow photography through open windows, if viewable from the outside.

Thank YOU for playing.

3519. Asshole Cop

Newsgroup: rec.radio.scanner
Date: 2003-12-07 21:40:38 UTC
From: abc@123.con
Message-ID: <3fd69ce3.117436254@news.alt.net>
Source record: 24120
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

So this asshole cop pulls me over today and starts asking me why I have a scanner in my car. I tell him it's a hobby and that NJ state scanner law states that having a scanner in your vehicle is not illegal unless it's used for commiting a crime or evading police. Which is true. It's says so right here:

http://www.siscanner.8m.com/laws.html

and here:

http://www.maxpages.com/frequencies/NJ_Laws

and here:

http://www.fordyce.org/scanning/scanning_info/nj-laws.html

That wasn't good enough for that asshole, so after he writes me for not having a seat belt on, he tells me that the "NJ scanner law stuff is hogwash" and that unless I'm a tow truck driver, EMT, fire fighter....(insert own bullshit) that I can't have it in my car and that he has 30 days to decide if he wants to charge me with the crime of having it in my car.

What should I do? I know for a fact that it's not illegal and this asshole harrassed me just cuz he was bored i suppose.

Taking curbside photos happens all the time. Real Estate Appraisers have to produce pictures of at least two (usually three) comparable homes when they're doing an appraisal. Sometimes, they get lucky and find one on MLS, but usually they're shooting photos from across the street.

Having known several appraisers, I can tell you that they know very well to be discreet when doing this. If people are present in the yard, they will ask permission, but most just leave their motor running and shoot them out of a rolled-down window.

That's a shame.

Well, the first thing to do is wait thirty days so you won't have two charges to defend (bogus or not, it will take up your time if he's provoked into filing the charge).

After that, my suggestion would be to ask your local District Attorney for an opinion on your radio (he'll appreciate the links, or better yet-- a hard copy), and get his favorable reply in writing. (You may end up with an Assistant DA, but they will accommodate you if you persist.)

Keep the letter with your insurance certificate and registration handy in your glove compartment, just in case you forget to buckle-up again.

No, thank you! The BASIC rule of photography is this (and I make a living
at it):

If you are standing (or sitting for that matter) on public property, you can
legally photograph anything you can see from where you are standing. There
are, of course, exceptions for various national security considerations,
etc., but it is absolutely not against the law to stand on a public sidewalk
or in a public street and take a picture of somebody's house, their rose
bushes, their car, their ugly fence, their goofy-looking mailbox, their body
etc., etc. The fourth amendment has absolutely nothing to do with it. And
it's not at all like the case of a museum--a museum is, first of all, not
public property in the sense of the law as it applies to photography (or
just plain "seeing"). First of all, photography (flash) can damage museum
property and annoy the patrons and is often prohibited by _rule_ for that
reason. Also, and one does not have unrestricted access to a museum as one
does to a street. It is not _public_ in the sense that's pertinent here.
And by the way, you _can_ legally take a picture of, say, the side of a
house sporting an open window and capture, perhaps, some of what's inside

the house and visible. And that's the law.

In a former profession, I needed a modified model release to photograph
the exterior of houses.

At the Mystic Seaport Museum in Connecticut, where there are outdoor
exhibits open to all, I have to register as a photographer and sign an
affidavit that the photographs are for personal, not professional, use.

Well, what do you expect from someone so fucking stupid that he can live with
himself for enforcing seatbelt laws? Victimless crimes should be abolished.
The "people" enforcing such laws are robots, not human beings.

Get a copy of the New Jersey Police Manual. They are approx. $30.00 from http://www.gannlaw.com/

If you can't the prosecutor (NJ does not use the term District Attorney) is obligated to let you use his /hers in your defense. You should just be able to quote the state statute.

The cop was probably trying to just give you a hard time figuring you don't know the law. I doubt the officer will pursue this further.

> What should I do? I know for a fact that it's not illegal and this asshole
> harrassed me just cuz he was bored i suppose.

First off: Please wear your seat belt. Consistently. The life you
save may be your own.

Second: If the cop tries to charge you, take him to court, and
provide the judge with a copy of the New Jersey State Codes of Criminal
Justice, sections 2C:33-21 and 2C:33-22. Between these two sections, the
law clearly states that it is only illegal to have a scanner in your car
IF you are committing a crime, or preparing to commit a crime.

Since the judge will have no evidence that you were going to do
either, your friendly neighborhood cop will end up with egg on his face,
as it were.

In the future, though, I would strongly recommend that you carry a
hardcopy of both law code sections with you, as well as a copy of your
amateur radio license (if you have one). Oh, and try to be as polite as
possible, even if the cop in question is being a jerk. They're human
too, and you have no idea what kind of day they've had.

Good luck.

> Get all the lastest info on the effort to liberate the Iraqi people, brought

<biting tongue>

This message is being posted to ham radio and scanning newsgroups.
I will not pollute them with political debates or diatribes, and I would
ask, as one Internet user and ham radio op to another, that you avoid
doing so as well.

In short, please trim down your signature block. Six lines is
considered the max according to widely-adopted Usenet and E-mail

guidelines.

If you have more to say than signature space will allow (and it certainly looks like you do), please start a web site for it.

Yes, it is. And we can tell by his disrespectful tone and
language used that it's the same idiot that posted it. They
must have let him out of his cage... Suggest you killfile.

First, speak with some lawyers and the prosecutor/district attorney. If you find you are in the right, then I would see if it's legal for you to record everything. File a complaint against the cop and if they call you, record what they say. They could come and lock you up, and then you could end up with a nice nest egg.

No one can say a law is "hogwash". Police don't make laws. I wouldn't do anything if I were you. There's nothing he can do either.

Since upgrading my PC and OS to XP, I am no longer able to use my DOS based scanner control software with my AR-2500 scanner. Also I have tried Scancat Gold which lists AR-2500 in the configuration. It does not work.

Does anybody know of any software or hardware that I can use to enable my PC and AR-2500 to communicate.

Does anyone know where I can get a copy of Scancat for DOS????

73 KF4KFQ

antho10359@aol.com

Thanks

And we can thank Mr. Reagan for blackmailing the states in a similar fashion to raise the drinking age to 21.. I'm not certain that Carter had anything much to do with the federal seatbelt mandate, but he had his own boondoggles.. the 55mph speed limit, the banning of decorative gaslights, etc. during the Arab oil embargo, and our own oil companies claiming we were dangerously short on reserves so that they could gouge us at the pumps (at least Carter's Attorney General made them give some of it back in the form of free gas).

Doesn't matter anyway which party pushes this stuff.... it's BS. The federal government has been strongarming states to do their bidding for years.. wonder what the next unfunded mandate will be??

Well I sure hope that it's Log Periodic antennas (a whole set of em!) for every short-wave DXer out there.

And the big chunk of property to put 'em on too. And of course maintainence will be done at the cost of the taxp..... er... Government too!

Hey, that works for me. Every time I drive onto Kunsan AB and see the huge
log periodic antenna they have there, I get all envious..

True, NJ /is/ a police state. Took a road trip a couple of years ago,
drove almost 6000 miles around the midwest and northwest USA, saw
maybe three speed traps the whole time. On the final leg through NJ
heading back into NYC, counted over TWENTY speed traps. And those are
just the ones that didn't bother hiding.

And remember, NJ is one of those places where DWB is a felony offense.
(Driving While Black, for the uninitiated).

I've boycotted New Jersey.

Pick up your scanner and move somewhere that the police don't act like
stormtroopers.

And they will plant dope in your car if your not nice to them.
I refuse to drive in the state with New York plates.
Yeas ago I was stopped on the Palisades Pkwy in Alpine for a tire presser test.
The cop said the tires have to much wear and said: "you cant drive garbage through the streets here"
They impounded my 68 Chevy van and slashed the 2 front tires, handed me an unsafe vehicle ticket and told me start walking ......waiving nightsticks

What the DA thinks doesn't matter. See FCC ruling 93-17, which dealt with amateur radio equipment which could RX public safety frequencies. Once the feds rule, local jurisdictions don't have a choice.

> Keep the letter with your insurance certificate and registration handy in
> your glove compartment, just in case you forget to buckle-up again.

What I didn't see in the original post was whether or not the driver WAS wearing a seat belt or not....

> The "people" enforcing such laws are robots, not human beings.

Since when is that a "victimless" crime? Jerk not wearing a seat-belt gets involved in an accident (his fault or not; doesn't matter) - and sues the other driver for the aggravation of his injuries (which could have been avoided or certainly lessened if a seat belt had been worn). Insurance company raises rates on ALL customers due to the litigation (even if their insured is not at fault - because of the "general statistics" of more serious accidents in the area).

Unless you can show me that ONLY the rates of the non-seat-belt-wearer are affected, then there are victims other than the perp. of your "victimless" crime....

Uh pardon me, but he won't be able to tell you that because you and everyone
else that replied are being trolled. The post that you are replying to was
originally posted in April of this year not by me, but by someone going by
the alias "RedXIII".

http://www.google.com/groups?q=g:thl2901170379d&dq=&hl=en&lr=&ie=UTF-8&oe=UTF-8&safe=off&selm=XiGdnQpVrN5FVTijXTWcpw%40comcast.com

Seems this troll, who is now assuming my identity thinks I am this RedXIII
person, who by looking at a few of his past messages attempted to get the
troll's anonymous remailer account terminated.

Just letting you know.

It didn't happen anywhere, this whole thread is based on a bogus story that
showed up in April.

It's troll bait. The OP even includes himself in the his moron list,
reread the original message.

The OP is just a cross-posting dumbass sheep shagger who has a hardon for
some of the radio groups.

Search google groups using this criteria: asshole cop group:*.scanner

Go to this site
<http://www.strongsignals.net/index.cgi>
and check out the trunk scanner information down the bottom of the TRUNKING board:

<http://www.strongsignals.net/access/boards/trunking/board.cgi>

Also on that board and the frequency board, look up the trunking system's
frequencies
and the type of system in your area to make sure the trunking scanner will work on
it
and support the trunking systems. If any of the folks you want to monitor are ASTRO
digital voice
a digital scanner would be in order.

Check out the software and computer interface cable , you will want that to program
the scanner.

<http://www.starrsoft.com/freeware/Win95/default.asp>

Pay careful attention to the correct Catalog Number for the cable that supports
the GRE PRO 93 , PRO 95 and PRO 2053 radios.

> (snip)

Exactly right, Don. According to several court cases, a person in a pubic place has no reasonable expectation of privacy. Likewise, property is not protected when photographed from a public place. In other words, as long as you're not on private property, and what you're photographing can be seen from outside that property, you can photograph it. There are a few exceptions. For example, you cannot photograph someone through a window of a house, even if you do so from a public place. You also cannot do anything out of the ordinary, such as climbing a fence to photograph into private property.

What you can do with those photographs is another matter (and this is where some protections exist). In general, there are few restrictions on photographs used for private or journalistic purposes, but commerical use often requires permission (a release) from the person on the photograph or the owner of the property photographed. But even here there are exceptions. For example, a person photographed in an embarassing situation may be protected from even journalistic use if the photograph is not specifically news related and a person included in the general background of a photograph used for commercial purposes may not be protected.

Everything changes when you enter private property (and a museum is often considered private property, even if only owned by the state). In this case, the owner of that property makes the rules.

I seem to remember this exact same thread about 6 months ago, and six months before that.

Show him your ham license and all is good.

Considering it comes with 3 battery packs and the pc cable would make it
worth the $450 he is asking. Whats he supposed to do, give it away?

What I failed to say Jerry, I am moving to Myrtle, yes there is an HOA but from what I found out from the neighbors and the real estate lady (who also resides there) the HOA is not all that strong. Wait until they find out i'm a ham. No, I have no intention of putting up a tower, just a long wire from the back of my property to the house (1/2 acre). Yes, my daughter does reside in a rather expensive area. And "NO", I don't enjoy driving on I-77. It's bumper to bumper three lanes wide from exit 21 south to the state line at 60 MPH. Happy to see they are widening the roadway, I might even give 495 west of I-77 a shot to the state line when it's finished. Seems for what I understand they decided to build the east part of 495 first to accommodate the rich folks in around Union County area. One would think the area west of I-77 close to the airport would have heavier traffic.

Back to stealth antennas and HOA's. I have been planning for several months how I am going to put up an antenna. Ideas I have considered are: Slinky's in the rafters, gutters, yes the house I bought does have gutters as compared to all the other homes, most do not. And finally long wires. So far, the only people that know I am a ham is the real estate lady and the guy next door.

I wouldn't stop in my driveway and start taking photos of my home if you enjoy life as it is. Don't invade my privacy and I shall not invade yours. I invite Russ to give it a try, and "I'm NOT playing". I enjoy my privacy. What's mine is mine and what's yours is yours. Russ, just because the U.S. Attorney General got a new law passed in the U.S. Congress doesn't give you or the Feds to invade my privacy.

"God Bless America"

Let's get real and stop the BS. The police are not going to lock anyone
up for having a scanner in their vehicle of not having the belt on.
That's the most stupid thing I have read.

You most likely was stopped to for NOT being buckled up. Most states
require some other violation before they can use the belt laws. The
scanner was just an after thought when the officer seen it. The majority
of police (citizens) know nothing about radio/scanner laws. It's not a
hobby like fishing or motorcycling etc..

What you DDM should do is stop being a nut and start being polite, just
like you would expect be to done to you. The newsgroups are not the
place to ask legal questions in the first place. As was stated, get a
copy of the scanner laws and show the officer, that could help him/her
in their duties and help keep the heat off off of you and someone else
in the future.

The "55" came from Nixon. You remember him and watergate.

"ONE" term Carter was a boondoggle.

Carter needed the FREE gas to cook his peanuts.

10-4 on the unfunded mandateed laws from the Feds. They make laws that
the states are required to enforce but fail to fund them.

Brenda Ann wrote:

The media doesn't even photograph people without their permission. Who the heck do you think you are, someone special? Don't invade the wrong persons privacy, you could be surprised.

Basic rule of photography? Is NOT the law of the land.

Don Forsling wrote:

I've been reading this NG, along with several others. Lately, we have read about a ham arrested in Indiana for having a mobile rig. We now read that Michigan is close to passing a law requiring police permission to carry mobile radio gear, with a proposed penalty of a year in jail for violation. I also seem to recall something about a county in NY having recently issued a rule against mobile operating.

Are these connected? Has the possession / use of mobile radio equipment been targeted for repression, in a similar manner as the possession of firearms?

I don't like the trend I've been seeing in the U. S. The place is rapidly becoming less and less "free". Liberties I have taken for granted all my life are being chipped away, state by state.

I suppose the problem is that the possession of mobile radio equipment (like the possession of firearms) gives a person some "power" of which the government is afraid. It is indeed unfortunate that the people are now so feared and mistrusted by their own government.

I don't have the answers, but I am alarmed. I think we all need to wake up to what is happening in the land of the free and the home of the brave. It's not pretty.

3578. MIL Air Reception: Parameters Correct ?

Hello:

Using a 780. New at this.

Hoping to pick up some MIL Air stuff. Live outside of Boston.

Have the following parameters set; are they correct ?

Freq. Range: 138 to 144, and 225 to 406 MHz
Mode: AM
Step Size: 5 KC

Much thanks,
Bob

Mandatory insurance is also fascism, and the government should be paying for
everyone's health care anyway -- they're not doing anything else useful with the
taxes they take from us.

Not sure about all mobile radios? but here in Michigan if one wishes to have
a scanner in the vehicle and they are not a licensed radio amateur they must
obtain a permit from the Michigan State Police. It's been that way for a
long time.

had one since they first can out, still going today.
1 have to do this about once a year.

get a can of Nickle screening spray.
or a little bottle of heated rear window demister repair paint.

use that to put a 'blob' back on eack sponge key 'tit'
let it dry & away u go.

i find it a good idea to clean the opposing PCB pads with a little
isopropylyn (well that stuff!)
as well

Tell you what Jim, I'll stand in the public street all I want and take pictures of anything I want to and you can't do squat about it. I won't trespass on your property and I won't take pictures inside your property without your permission. Your privacy ends at your front door, and rightly so but what's in public view is just that...public. Ask the people at Bay Hill CC in Orlando who lost the lawsuit against the computer game company that used images of their houses in a golf game. Ask the big-time Hollywood star who just lost the lawsuit against the paparazzi taking pictures outside her house. Don't be foolish enough to accost me on public property or threaten me. The immediate and long-term repercussions will amaze you. You aren't big

enough to intimidate me and you don't have enough money to make the legal problems go away. Grow up a little and consult a professional instead of getting legal advice from television or here on the 'net. In a bit of irony, we are almost on the same side in this. I am currently looking for a home in an area without deed restrictions. Even if I weren't a ham, I would not sign a contract for a house with CCRs. I lived in Heathrow in Seminole County, FL and in another CCR community here in NC and I've had enough. When you sign for a house in a CCR community, you are signing an ordinary commercial contract that is completely enforceable (from both sides!) no matter what you think or how hard you stamp your feet.

Someone asked about this scanner at Strong Signals last month. I'm
taking the liberty of cutting and pasting the reply here.

>>
Nice radio. Technically a desktop, but you can run it off a car
battery. ... I use the BC278CLT both as a desktop scanner and as a
mobile scanner, but now when it's in the car, I run it off a 9 volt
regulated DC power apapter plugged into the car cigarette lighter.
The BC278CLT has been reviewed [at strong Signals]. Its claim to fame
(at least to me) was that, when it was discontinued at Best Buy two
years ago, it sold for absurdly low prices - like, under thirty
dollars. Strong Signals listers were driving miles and miles to scoop
them up. Sorry, but those units are long gone.
<<

Strong Signals BC278CLT thread

Uniden BC278CLT review at Strong Signals
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=recv&
num=033
or
http://tinyurl.com/ycnc

BC278CLT Owner's Manual, from Uniden Website, in .pdf format
http://www.uniden.com/pdf/BC278CLTom.pdf

The 278 has AM, FM, SAME weather alert, air band, and 800MHz. It makes
a terrific mobile scanner, as the display is always lighted. It is
good and loud too. What I would like most on it is a lighted keypad,
as cellphones have.

The person who wrote that reply at Strong Signals, "blair," left his
email address there, so you can write him directly.

Sorry Pappy, you're wrong. You have NO expectation of privacy in a
public place. How many photos have you had published? I have had
many and none of them required model releases. Why? You guessed it,
didn't you...there is no privacy in public. I cited examples in
another post but I'll repeat them here, just for your edification. A
big Hollywood star lost a lawsuit in the last couple of weeks against
the paparazzi taking pictures outside of her house from public
property. Some homeowners at the Bay Hill CC in Orlando, FL lost a
suit against a computer game compant that used images of their houses
in a game. As a matter of fact, the law protects ME from your
intrusion or interference when I'm in public no matter what I'm doing.

Thesd are the correct frequency ranges. Also look for the
Air Guard A-10s in the VHF low band it's lake every other Mhz
form 30 MHz to 50 Mhz
check out this site:
<http://www.fordyce.org/scanning/>

The pad is like 7.00, why mess with anything else. I charge 25 bucks,
total to replace one.

The radio that you are talking about is the Pro95. It is identical to the Pro93, except that the Pro93 only stores 300 frequencies in memory instead of 1000.

The thing that you left out of your question is this: What sort of things do you want to listen to? That info might help determine if this unit would be a good fit for you.

I have a Pro93 and it has been perfect for my needs. It's a great little radio. I mostly listen to the local police/fire stuff on an 800MHz trunked system. I also have another local department on an 800 MHz traditional radio. I've got the local airport control stuff in there, as well as a few other things like FRS/GMRS walkie talkies and such... I've not used more than about 50% of the 300 memory slots in my radio.

For $149, the Pro95 is an excellent deal. I think it lacks the Military aircraft band, but I'm not 100% sure. I've never really been interested in that so I've never looked to see for sure. I think I remember someone saying something about MilAir coverage in here at one point though.

It's done all the time, Pappy. Do you honestly think the media runs around getting permission (a release) for all those people at a sports event, demonstration, or some other news story? If you or your home is a news story, or either is caught in a photograph of a news story, there are few privacy protections involved. If you or your home is photographed from a public place, there are few privacy protections involved.

> Who the heck do you think you are, someone

The case law is clear on the matter, Pappy. And there are dozens of books on the legal issues surrounding photography, most citing specific cases, available to photographers. Any wise photographer has read several (I've read perhaps all of them over the years).

3600. Coax signal deteriotion to Scanner

Newsgroup: rec.radio.scanner
Date: 2003-12-09 06:05:34 UTC
From: Paul Keenleyside <nospambcpl@tellus.net>
Message-ID: <OCdBb.28860$d35.11116@edtnps84>
Source record: 24003

How is the signal from the antenna affected by how many connectors one has
on the coaxial cable from the antenna base to
the scanner unit? Consider, gentlemen, this layout:

Currently I have this configuration in my vehicle:

```
*
|
-X----------------X -- X----------------------X ======
```

Where "X" is a BNC connector, "---" is the cable, "===" is the scanner and "
* " is the antenna. The reason why this was
made is that the scanner is under the dash and as luck would have it, a
customised coax cable had to be made to connect
the antenna to the cable that came with the scanner. They weren't gendered
properly, and I noticed quite a difference from
the scanner under the dash with the scanner that I have as a portable. The
portable is a BC2245XLT, the other a BC780XLT. The other thing is that the
coax to the BNC connector to the scanner has bent a bit badly, exposing
strands.

So how "bad" is the signal loss from the antenna to the scanner in this
configuration. It is bad, but would be curious to
lknow how "bad". It's noticably bad because despite a connected antenna on
the roof, I get better reception off the portable than the under dash
BC780XLT even on the same frequency range. Botht he BC245XLT and the 780XLT
are less than
a year old. I would like to use the 780XLT in the vehicle as it has the
alphanumeric display and 200 more channels in it,
plus I can run the vehicle's power to it.

I found the solution through a radio shop in Western Washington. I'm wanting
to get a 100Mhz to 200Mhz magnetic mount
and also keep my generic piggly wiggly celluar type antenna. The 100Mhz to
200Mhz will also come in handy as I'm thinking of going for the basic
amateur radio licence (in Canada) so that I can get in on using a VHF radio
set and get into ham radio.

Any antenna suggestions (one can always use another antenna). He's suggested
a Maxrad MHB5800 antenna.

Thanks!
PK

Actually there is. As a civil matter, if you have enough money you
can sue most any one for most any thing that you *think* affects you.

Now you might, win, or quite likely would win, but to do so is
expensive. For many just the prospect of being taken to court can be
a deterrent.

You could also sue for harassment... But we are looking at something like 20 grand to file a suit unless it's small claims. A good lawyer can draw it out to the point where it can run into 6 figures. The only ones winning in that case are the lawyers. It *may* depend on how much you can afford to protect your legal rights to do what some one else doesn't like.

Another option is for him to contact a couple neighbors and they report you to the police as acting suspicious. You may get hauled away and only have the opportunity to explain later.

In New England a group is suing the pilots flying out of a local airport because they don't like the noise and there is nothing illegal about what the pilots are doing. So, by harassing the pilots by filing lawsuits they figure they can force them out. It may work and it may backfire if the pilots counter sue for harassment.

3607. Want a Scanner, Help me !!

Newsgroup: rec.radio.scanner
Date: 2003-12-09 11:56:33 UTC
From: abc@123.con
Message-ID: <3fe3b80f.57645109@dweeb.net>
Source record: 24010
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,rec.radio.shortwave

I just borrowed a friend scanner to listen to. It is a Radio Shack Pro-51. I think that I have the bug and I want one of my own. I am a newbie here so I need advice from people who are experts, which is why I came here. I have read through a lot of posts here and a lot of the talk is over my head. I know that I will want a scanner that has capabilities that I may not need now but I will want in the future when I am more experienced. Here are the features that I would like to have:

1. Must be portable.
2. I want all the "action channels" whatever that really means. Police, fire, aircraft, etc....
3. I want a unit that I won't have to replace 6 months after I find out I want another feature or 2.
4. I want the most MHz coverage that I can legally get here in the US. I am not interested in cellular stuff, seems boring to me hearing about susies sore toe at school today or what the family wants from Hop Sings Chinese place for dinner.
5. I want weather info.
6. If possible I would like to be able to hear FM and AM radio. Please don't make fun if this is not possible to do.
7. What does "trunking" mean? I live in West Virginia and I am not sure that they use such a thing but I would hate to spend money on a scanner and find out that they were going to use it and not be able to get it in the future.
8. Do I need software to hook it to my computer? Seems unnecessary to me.
9. The most features that I can get for the money.
10. Limit of $350.00 new, I would be interested in a good used model from a reputable place or seller.

I know that is a lot of questions to ask here, but I am hoping that I have not overdone it. I figure that it is the best way to find out anyway, if you don't know you have to ask.
The 2 models that have been recommended to me are the Radio Shack Pro-92 (I think, it is the one with trunking and is $349.99) and the Bearcat BC-3000 XLT. When I look at the specs for each of them the Radio shack frequency list has ranges of frequencies and the Bearcat just lists an entire range that is covered. Such as the Bearcat lists 25-550 & 760-1300 MHz, while the Radio Shack model has basically the same coverage but has them chopped up and eliminates small portions of the range. Should I be concerned about that in the Radio Shack model? Is there anything in that range that Radio Shack cuts out that I will miss?
Any help that you all can give me here will be put to good use. If you have opinions on the ones I have listed then please let me know. If you have others that foot the bill or you think would be good for me then help me out

on that too.

Thank you for your time and help.

Let's not get stupid here.

I don't make threats.

I as well as you and all reading this do know that there are HOA's that run a decent and positive program.
I believe this thread was centered around the HOA that wants to try and push their program to the limit with some people on the boards and some neighborhood people who think they are cops, running around the neighborhood harassing their fellow neighbors for the most stupid thing they can find. That is what the majority of us are complaining about. People who think they are real cops when in fact they are just the neighborhood nuisance.

The new neighborhood I am moving into (159 homes), there are 9 "real" cops, 3 still on the job and 5 retired, just like myself. I do believe the neighborhood is well protected. Oh, I failed to mention that the Chief of the County Police also resides there. Being private property we do not have police patrols so the good neighbors as they are look out for each other when it comes to strangers driving through. When I was ask by two people when I stopped at a stop sign if they could help me find someone I was looking for. I told them I was looking over the area because I was buy a home there and gave them the address. We had a very nice talk and I moved on about my business.

As I have said before as well as others: I respect your privacy rights, you should be doing the same.

I plan to buy my brother (who lives in Austin, TX) a scanner for Xmas.
Does anyone know whether trunk-tracking and APCO-25 are needed for law
enforcement/fire/EMS scanning in Austin. I found frequency info on
the web (http://members.tripod.com/octane_plus) but I don't know how
old this info is. I seem to remember a passing reference that Austin
went digital.

yes austin is apco-25 9600 baud CQPSK digital.
the only scanner that is available to scan this is the uniden 296(portable)
or 796 (base).

Thanks to all for ideas on pad repair as well as this scanner I asked about. I doubt there is any Mil-Air here for me to listen to that I'm aware of, so no worries there. Haven't heard it before, so won't miss it now. I just need for conventional listening and some trunked stuff across the river from me in the next county. G.W.

I was given a new RS pro-96 for a present. We do not have digital here. I am selling it since I already have a BC780XLT. The package is complete from RS, box, manual, antenna, clip and regulated external PS. I will sell the package for $500 shipped. POSTAL MO only. I do not use paypal.

Also have Motorola trunking base and some P110 UFH portables. Photos available for all.

> certainly lessened if a seat belt had been worn).

Another example of the Great Dumbing Down of America.

The world is methodically being dumbed down by government efforts to protect us from stupid people.

Stupid drivers don't recognize the dangers of speed, so they drive too fast and kill themselves. The government regulates speed, so now more stupid people survive.

Stupid automobile passengers get killed because they don't buckle their seat belts. Government steps in and makes seat belt usage mandatory, so now more stupid people survive.

Stupid pedestrians don't know enough to not step out into a busy street, so they get injured and killed trying to cross the street. The government makes laws giving them the right-of-way, so now more stupid people survive.

Stupid parents don't recognize the value of childhood inoculations. The government makes them vaccinate their children before entering school, so now more stupid people survive.

Stupid hams don't know enough to keep their fingers out of 3KV plate transformers, so they get fried in their own juice. Some would have the government protect them, and more stupid people would survive.

In the ways of Mother Nature, stupidity was kept in check because stupid people generally didn't survive to breeding age, thus our species tended to get smarter over time.

But stupidity begets stupidity, so we are being overwhelmed by a tsunami of stupidity. The tsunami is triggered by the government protection of stupid people, which allows them to survive to reproduce.

Ergo, less government regulations makes a smarter populace.

and Chinese military transmissions found on 15.2 MHz.

I thought I'd share a list post that has always remained in myï¿½mind as THE scenario, though circumstances have delayed its implementation.

(Note the article date.)

I left contact info intact so the cement-heads among us can tell the author how crazy he is directly. The rest can prepare in earnest, while the fools rush off to Walmart for free inoculations when the television tells them to.

Also keep in mind as you read through this, that there ARE "anti-terrorist" teams (civilian management squads) attached to every police force in the country, and fully-operational detention centers situated outside of every US city.

Subject: SETTING US UP FOR LETHAL FLU
Date: Wed, 1 Nov 2000 18:33:52 EST
From: WarriorClass1775@cs.com

Chemtrails -- SETTING US UP FOR LETHAL FLU

This will be a multileveled event. After the Killer Flu there will probably be other assaults upon us. I will add my concept to this message at the end. But don't forget that our allies and friends, Russia and China, plan to help out by bombings and death rays, especially on the coastal population centers.

Mainly with the neutron bombs that kill people by vaporizing everything but the bones, while preserving the infrastructure, buildings, homes, etc. Sounds like a more realistic halloween this year. --Doc

Chemtrails? So, you haven't yet figured out the airborne conditioning-agent release program that is being operated by the government. I'll give you some hints, but first I'll give you a little information about myself.

I'm a retired government scientist with an advanced degree in one of the health-related disciplines. I do not use my real name for fear of retaliation, either against me, or against members of my family. I always try to route my e-mail communications so that they appear to come from another source, usually from one somewhere within the government.

Sometimes I use the internet resources of the public library - whatever it takes to hide my true identity and confuse those who don't want the sort of information I possess to fall into the public's hands. I have a small circle of friends who are, or were, in key positions within our military and several government agencies.

These are not the very top level personnel, but mid to upper mid-level people, scientists and analysts, who are in positions where they can see the day-to-day activities of what's going on, who are charged with implementing the details, but who are never quite privy to the schemes behind the work they do.

Each of my contacts has been able to supply me with a portion of the puzzle, but separately, none of them understands the whole story.

I'll tell you what I've pieced together so far, but I have to admit that this information frightens me because there is no place I can go with it. What am I supposed to do - write my congressman? I believe that would be like signing my own death warrant.

This whole chemtrail issue is related to the plan for decreasing the world population to around 450-500 million -- and starting with the US first.

Why? The people of the US are the only ones with even the remotest chance of stopping this. That is, if they knew about it. That's why the US has to be the first to go.

You have to understand that the world's elite covet the US for its geographic diversity - and they would love to return this country to its condition as it existed prior to Columbus setting foot here, but without the Native Americans this time of course.

You may have already heard how several national parks have been designated as world biospheres - that's the plan for all of North America, a giant nature park and playground that will be devoid of annoying human beings (that would be us).

And the people actually involved in doing the spraying, as well as those who will take part in the rest of the plans, are being duped into believing they will be spared, that is, permitted to live and remain on this continent as administrators and caretakers of this vast nature preserve.

I understand that about 150 to 200 thousand people are projected as necessary for maintenance purposes, but it's likely these people will not be Americans.

Those in charge wouldn't want to risk the possibility of some sort of revolt, so the workers will probably be brought in from Europe and Asia.

There are rumors floating about the internet that the chemtrails are part of some sort of secret program the government is doing to protect the US from future biological attacks.

Nothing could be further from the truth.

The plan is to sensitize, or condition, the US population to being wiped out by influenza A.

Over the past few years, people have been encouraged to get flu shots to protect them against the generally non-lethal strains that circulate through the population during flu season.

Each year the US government has guessed which strains were most likely to spread. They seem to always guess right - don't they?

This flu season, the government protected people with a trivalent vaccine that included the A/Beijing/262/95 like (H1N1) and the A/Sydney/5/97-like (H3N2). It also contained the B/Beijing/184/93-like hemagglutinin antigens.

For those not familiar with virology, the H and N refer to proteins on the outside of the virus, the hemagglutinin and neuraminidase, which are responsible for the virus attaching to, and then invading, a host cell. The public has been quite pleased with the success of the vaccines offered so far. But that will change in the future.

Researchers at the US Army Medical Research Institute of Infectious Diseases (or USAMRIID) at Fort Detrick in Frederick MD have reconstructed and modified the H1N1 Spanish Flu virus, making it far more deadly than it ever was back when it was responsible for the 1918-1919 flu pandemic that killed over 20 million worldwide and over 500,000 here in the US.

Consider that it could have killed many more, but back then, people couldn't hop on a jet and travel from New York to L.A. in five hours. Now, our ability to travel will increase the spread and will be our downfall.

The flu vaccines contain killed virus and protect the body well against challenge by that particular strain, but work poorly against other strains not included in the inoculation.

At some point, the vaccine stockpile will include the more lethal modification of the 1918 H1N1 in its live form. Most people receiving this vaccine will simply be renewing their annual flu shot, and the vaccine will still include the inactivated version of the more benign form of H1N1 (as was included in this year's vaccine).

The presence of the milder strain in the inoculum will slow down the progression of the more lethal H1N1 form, so people will become sick more slowly - but they will still eventually die. It will just take a few weeks longer.

In the meantime, they will be carriers for the lethal form of the virus, passing it on to everyone with whom they make contact. As people hear that others are dropping dead from the flu, they will flock to get their own vaccination.

And the entire population will be more receptive to infection because their lungs will have been pre-conditioned to guarantee it.

If you will remember back to 1968 and '69, the Hong Kong flu, which was influenza A type H3N2, killed over 30,000 people in the U.S. alone. That was a fortuitous learning event for some because it taught them that the flu could still conceivably be used to wipe out a population.

But at the same time, it pointed out the need to precondition the populace so that those who might normally be resistant could be rendered susceptible.

Hence the development of the vaccine program and the aerial spraying procedures to condition the population. The purpose of the chemicals in the chemtrails is to help the viral envelope fuse with lung cells, permitting easier penetration and infection.

But what about those few individuals who don't succumb to the flu? Probability alone demands that there will be some who survive - pockets of the population that are either not reached or somehow (and this is less likely) are resistant to the lethal H1N1 strain.

At this point you must also remember that our military personnel have been immunized against a variety of pathogens, including the anthrax bacillus.

For those geographically isolated areas where the flu doesn't do its job, it's a fairly simple matter to lay down anthrax spores and then send in what's left of the military to take care of anyone still breathing.

The anthrax spraying will probably come under the guise of a flu protection program to save those still alive after the epidemic. And the military, having been exposed to civilians with the flu, will eagerly await their own flu shots. I should emphasize that this is a last resort scenario.

Those orchestrating the plan will not want to use anthrax until all other possibilities are exhausted - this because of the long-term viability of anthrax spores. To scatter them over the countryside would mean the area would be dangerous for use by humans, at least those not vaccinated against the bacteria.

And think about this for a moment. Why do you suppose agencies like Fish and Wildlife are so eager to reintroduce wolves and other species into areas of the country which haven't seen these animals for generations?

It's all part of the plan to restore this land to what the elite envision as its early paradise-like state, with wild animals freely roaming the uninhabited plains and forests.

Granted, it will take some time to clean up the place and to maybe destroy a lot of small towns that might otherwise be considered a

blight on the landscape. But for the global elite it will be a small price for us to pay for their enjoyment.

==========

PROBABLE PLANS OF THE ENEMIES OF AMERICA

This is about a LIKELY impending nuclear and biological attack upon the United States by foreign powers, most likely Russia, probably with the help of BW/CW terrorists from Iraq and her allies, and very likely with the covert help of the Clintonistas. If they actually take place, there will be great destruction, and tremendous loss of life.

These attacks upon America have already been announced by the above as being in the planning stage. There is a report that overt attacks may begin late this Fall, and will likely coordinated with the NWO traitors in our own government.

It is likely that known patriots will be rounded up before the onslaught, and private weapons will be confiscated, perhaps before the main event.

Here is an incredible fact. Under the Global 2000 plan as developed by the Club of Rome in 1972, for President Carter, there is a covert intention by the International Bankers, transnational Cartels, and the other Globalists behind the New World Order to depopulate the world to an environmentally sustainable level.

Meanwhile, the elite members are safely ensconced in relative comfort in the many underground cities that have been prepared and financed with your tax money and the receipts of illicit drug sales.

Depopulation will be carried out by fomenting wars throughout the globe, using induced diseases and weapons of mass destruction, all of which will quickly escalate through the plan to use nerve gases and possible nuclear exchanges.

They will promote the use of vaccines containing potentially lethal agents such as live Spanish influenza virus as an ingredient of the next batch of "flu shots," and especially they could employ aerosol sprays of plague, anthrax, ricin, botulin, tularemia etc. and the contamination of drinking water with lethal bacteria, viruses, and chemicals such as ricin, botulin, cholera and shigellosis...

The following possible scenario may be more probable than anyone cares to admit: The preferred method will be mainly non-selective via the mass application of nerve agents and biologicals, as soon as all required facilities are made ready.

I am fearfully convinced that negotiations are now underway with those national regimes which are presently NBC Warfare capable.

The coming depopulation measures will likely be a combination of intrinsic and extrinsic insertions, utilizing nerve agents, plague,

anthrax, and botulin, etc. in a concerted effort to cleanse the planet of so-called "degenerates and useless eaters," perhaps to a level of approximately one to one half billion total inhabitants, sufficient to provide an ample slave population.

Employment of the grossly contaminating and long persisting anthrax will probably be initially limited to more sparsely populated areas such as the desert regions, although some selective use of VX and anthrax will be theoretically useful in preservation of certain UN Biospheres where rewilding does not require live fauna for several years.

There are some areas in which both human and animal depopulation may be appropriate, followed by total combustion through the selective employment of fuel-air bombing techniques, in order to kill contaminating spores. Regrowth and replacement of desired flora and fauna may then be accomplished through already designated criteria.

Weather alteration and seismic--vulcanism with ELF waves and HAARP are already being initiated in areas in which there are critical tectonic imbalances. This has also produced intense rainfall and widespread flooding in some areas, with severe drought in others.

Serial deep nuclear detonations with computed enhancement of shearing effects will be utilized to the furthest extent possible in the production of earthquakes and tsunamis.

ELF waves are now thought to be directed towards the polar ice caps and are melting them down to produce coastal inundations.

This is being blamed on "global warming." As soon as contrived crises begin on a suitable scale of intensity, martial law will be declared in the United States, followed by activation of Executive Orders and FEMA directives which will have completed the planned abrogation of the American Constitution. Americans will know the horror of a totalitarian dictatorship.

As normal communities begin to break down, welfare and social programs are curtailed, and food supplies are cut off, there will be widespread rioting. Armed gang activity will increase. Civil insurrection will supervene.

The streets of our towns and cities will be lined with decomposing corpses, garbage, and debris. As a part of FEMAs program, the United Nations Global Forces will be inserted in most areas to "keep order." These will probably consist mainly of German, Russian, Irish and Chinese troops.

"Mopping up" of deselected groups will then be accomplished through sanction and mass burials of both living and dead individuals by the most expeditious means available, with careful attention to disease prevention in UN personnel wearing bioprotective suits and masks. Body Bags are already prepositioned for the hygienic transport of the dead

where burial facilities are not yet locally available.

Bulldozer equipment will be selectively utilized in some areas to facilitate the rapid excavation and filling of mass graves. These areas will not seriously interfere with the habitations of the designated elites who will have occupied the underground facilities.

I suspect that the initial attacks will be augmented by alleged terrorist assaults upon major population centers. These terrorist units are said to be already in place, with suitcase nukes, biological and chemical agents ready to act upon receiving orders to move against preplanned sites.

It would indeed be advisable to get out of the larger cities when martial law supervenes.

I guess this is the age-old "what's the perfect all-band antenna plus cable" question.

Want to install a single (or maybe two) not too large or fancy small whip-type "all-band" antennas on the eaves of a residence and run cables to BNC jacks inside, for scanner listening in the 25-50 MHz, 100-160 MHz, and 450-490 MHz bands, and am trying to decide between a less desirable antenna and scanner location but with only about 3 to 4 meters of cable run, or a more desirable location for antenna and scanner but with maybe 7 to 10 meters (25 to 30 feet) of cable run.

Question is, if I use good 50 ohm coax how serious would the cable losses be for 20 to 30 feet of cable in the above bands (with the 100-160 MHz band probably the one of most interest)?

Thanks for any suggestions or pointers, on cable loss or specific antenna models.

I received a PRO-95 last year for Christmas and I love it. The $149 price for it right now at Radio Shack is a great deal. The only drawback to it is the hard to understand manual. The best way to program it is using the free Win95 software from developer Don Starr. You will need to get a cable for it though which costs about $20. You can get a lot of help from the good people at the site listed below. Links to the site where you can download the free sofware is also on the site below.

PS: The free software is NOT ONLY for use in Windows 95 operating systems!

Thanks for your input, it is much appreciated. As to manuals, I find few
that do make sense or easy to read. I've come up with the practice of just
looking at the book long enough to get to know the use of each button, then
throwing the book in a drawer and playing with the radio. I do much better
that way. I've seen 2 meter hand held books that keep you floating back and
forth between like 3 pages to learn a function. SCREW THAT! Thanks again.

"RARA was founded to meet the needs of the gay/lesbian community. Our
purpose, as defined in the RARA Constitution is as follows:

To promote the Amateur Radio Service
To foster friendship and goodwill
To offer benefits, support and a sense of community to all individuals
who are supportive of sexual minorities and their lifestyles, and who
share a common interest in Amateur Radio."

Great, gay amateur radio operators.

Gays, they wish to integrate with society by segregating themselves.

Makes sense to me (not!). They are ruining the English language by
identifying common words with their causes. One would believe that the
"Rainbow Coalition" was gay blacks, but it's not.

A local situation developed in which a woman referred to the perpetrator
as colored. The host on the news intimated that the woman was racist
since she use the term colored. Colored was in common usage at one time,
so one would expect older people to use it. It was supplanted by "people
of color".

"People of color" is the correct usage for "colored people", but one
usage is regarded as racist, one isn't.

The adulteration of the English language continues.

Dr. Artaud

This was tried in the San Francisco Bay Area some years back.
Flight patterns, changed for environmental reasons, brought outgoing
flights over housing south of San Francisco. After a number of
nuisance suits had been won in small claims court, Willie Brown, then
speaker of the assembly got a law passed preventing such suits. To
avoid problems with laws designed for specific entities (and probably
to minimize opposition), he managed to write the law so narrowly that
it applied only to SFO and one tiny airport up in Siskiyou County that
had no interest in the legislation.

All I need to know is that a mongoloid like yourself is unable to refute his own idiocy and therefore must post the same shit no one cared about the first 100 times you posted it.

Remember what Gielda said though.

"Actually this one is beyond a troll. Excessive morphing and posting substantively identical articles. Granted each one is a news story, but the articles contain only text from news stories and if the user wants that posted he should post it as links all in a single post rather than as 20 separate posts each just containing a news story. It's a slightly gray issue of BI, but we decided that it was abusive if continued and because it is gray warned our user first."

/steve

"Yes we do consider this abuse and warned this user about a week ago, if this user is continuing beyond that warning, this account is history. I've asked my abuse desk to investigate if the user continued beyond the warning."

/steve

You posting that "All I need to know about you" crap over and over again is gonna do you in because it's exactly what Mr. Gielda means when he says "posting substantively identical articles". Caputo is being informed. When he warns you to knock your shit off like Gielda did, maybe you'll run to news.admin.net-abuse.usenet and whine to him about how crooked he is because he put you in your place.

Look at the baby whine. Just follow this link and then read through the entire thread. Our little maggot troll boy is "Choir Boy" in this one.

Use any cable 1/4 inch or more in diameter , YOu will not notice it up to
500 mhz for only 30 extra feet. Best bet is some rg-6 cable if you can find
some that has a copper shield or if you have a good way to make a connection
to the shield as some is aluminum. RG-8x is good for a short run. Don't
worry about the impedance of 50 vers 70 ohm cable. It will not effect your
receiver coverage.

You probably have messed up the coax so bad that is your problem. Several
connectors should not be noticable in most cases. Provided that they are
quality connectors.

I have a pro-95 for two years,it is grate,I use it every day and is
still going strong,I down loaded Don Starr's free program to program
my pro-95,it works grate also.

Snip..a whole lotta nonsense.

I don't care who wrote it, it's just that someone buys it that interests me.

Where oh where are these fully operational detention centers outside every US city? Well, there is the county jail. But since it's stuffed already, I don't think that's what you meant.

I guess they are hidden as well as the 100,000 white boxcars lots of you kooks claim there are to cart us off to the "camps".

I wonder how you guys get any sleep, seeing conspiracies under every rock, and around every corner. Must be reallly scary to be a whack job.

Thanks for the chuckle..

BDK (Call me portland)

I will add to what Ralph said that the most likely place for "signal
loss"
will be at the connection(s) you make at each end of whatever coax you
use.
Buy some good quality pre assembled coax if at all possible. Avoid Radio
Shack junk.

my theory is all cops are assholes that why they are what they are its
a good ole boys club. the cops get paid to enforce the laws that
because there cops can break that isnt right. There are a few good
ones(the older ones) that have seen it all and just want to make it to
retirement where they can get drunk everyday and speed like hell all
to whip out the old badge when needed stating dont give me a ticket im
a cop.

HEY ! Even though I am from the opposite side of the aisle.

You got to "LOVE" Willie Brown :o)
- He has been a Good
- - and Faithful Public Servant.
- - - Who has Served the State of California,
- - - - and the People of San Francisco very well.

God Bless Him, amen, Amen. AMEN !

Great Freudian slip re "pubic place". <huge grin>

Have you ever considered testing the universal truth of your assertion? How about spending a week or two at a playground, photographing only little girls, say ages 6 to 10. Let us know if you survive.

Done all the time recently. I have a new desk with the keyboard too far off centered. As a result, typing mistakes have increased dramatically. In this case, that "Freudian slip" got right past my spelling checker.

> Have you ever considered testing the universal truth
> of your assertion? How about spending a week or
> two at a playground, photographing only little girls,
> say ages 6 to 10. Let us know if you survive.

Lets be realistic here, Ed. We're not talking about child porn - laws don't protect that. What we're talking about is photographs taken for legitimate purposes (art, advertising, travel, architecture, news, and so on).

Regardless, while I haven't photographed little girls specifically (and have no special desire to do so), I have dozens of images of kids at playgrounds, parks, and on the street, in my film library. Some were taken by me and some by my wife. Whatever the case, nobody has ever complained while either of us were taking those photographs.

Any of you cute radio guys willing to help a girl out?

I am considering purchasing a Uniden BCT-7 for use in my vehicles when traveling. I am also considering using a CB. I am wondering if anyone has any experience with this unit. I am wondering which antenna parts I will need to make it work properly. Will a simple magnet mount antenna do the trick? Can I use the same antenna for both the CB and the scanner or will I need an antenna for each.

Thanks much for this and several earlier right-to-the-point replies.

Helpful people on newsgroups can be really helpful.

The USS Geo Washington COMPTUEX continues offshore Florida. It looks like
it will be another very busy day with COMPTUEX action. I am hearing:
BLUETAIL 40 (E-2C),
BLUETAIL 41 (E-2C),
[WILD]CAT (F/A-18s),
RIPPER (F-14s),
SCOUT (S-3Bs),
DOG (F-14s),
HAWK (F/A-18s),
LONGHORN 27 (S-3B?)
and COUGARs are among those working here already.
The tanker is a RHET KC-135R from Warner-Robins AFB (19ARG). There is
another KC-135R in the area (BACKY 32 from Seymour Johnson AFB), but I have not
heard him involved in the COMPTUEX today.
The usual COMPTUEX freqs have all been busy including:
235.75, 267.5, 276.3, 288.0, 357.0, 369.6, 380.8.
Some acft are dropping LGTRs at the range, but others are cancelling drops
due to wx.
If all of this was not enough this morning, P-3s are flying in what sounds
like unrelated flights, NASA birds are arriving at the Shuttle Landing
Facility, US State Dept acft are in the pattern here at Patrick AFB, and USCG
acft just dropped some flares offshore Cape Canaveral for training. Great comms
today.

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring
Patrick AFB (KCOF) NASA-KSC Shuttle Landing Facility (KX68)
Avon Park Bombing Range (KAGR) Cape Canaveral Air Force Station (KXMR)
JSTARS E-8 Acft Integration Facility, Melbourne IAP (KMLB)
Worldwide Military HF Communications

>>

Further info on this, he posted the same as "RedXIII" in
rec.radio.scanner on April 22, 2003 (probably a cross post).
Link is:

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&frame=right&rnum=&thl=
0,1083608724,1083589878

A click on the link in his sig

(http://mywebpages.comcast.net/RedXIII1/Info.html)

provided enlightenng, yet crude, info that RedXIII is just a troll. This
link verifies this.

The actual page text says: "You're all a bunch of f***ing losers that
are being duped by the REC.RADIO TROLL!!!! F**K OFF!!!"

How much more more do we need to realize every bit of the original
post is troll fodder?
Gosh.

> Membership is only $15 a year.
>
> http://www.rara.org/

Hmmmmm..... The subject says "everyone" please join, as if this is some group oriented toward inclusiveness; however, the stated purpose (via the link Kevin provided) says it's only for "...all individuals who are supportive of sexual minorities and their lifestyles.....". Not very inclusive, is it?
Would you like to know who belongs to this group before you consider joining? Sorry, not possible, according to the website: "The roster is confidential and distribution outside of the membership is prohibited." So, they'll take your membership money, but you can't find out who else is a member until you join, and then, you have to keep those names a secret. Just what we didn't need, another secret society.
Even Kevin's email address provided in the post is bogus. I would imagine that anonymous posts to join secret societies would go without mnay positive reponses.
This might explain why though claim they've been around for almost 9 years, and haven't been able to recruit but 100 members.

Of course, it could be they HAVEN'T been around for 9 years. This post (again by Kevin) claims he's TRYING TO START an amateur radio club for gays:

http://groups.google.com/groups?q=%22kevin+souter%22&hl=en&lr=&ie=UTF-8&oe=UTF-8&selm=3ff20de2.145179266%40oryyfbhqu.arq&rnum=7

this link having today's date, 12/10/03. So, has it been around 9 years, is it getting started today, or is he just starting something to compete with rara? The post referenced above narrows the membership topic even more: "just gay Amateur radio talk".

Maybe, just maybe, he's just a troll???????????????

That remimded me of some pix I saw of a cut away of a RS connector , maybe it was L type where a spring or coil of wire was used. That thing acted almost like a RF choke and had a very high loss.

I went to the Radio shack site and looked up RG8 (16 AWG) and got these
numbers and calculated the loss for the rounded distance numbers:

Freq loss per foot @ 10 foot @ 30 foot
100 MHz .037 dB .37 1.11
400 MHz .080 dB .8 2.4

3 dB is half your power so over 400 MHz your higher antenna better pick
up twice the signal to make the longer run worth it. The cable loss is
fairly linier so you could plot the two points in excel sheet and figure
the loss for any frequency around these points.

NY Times: Gay Ex-Officers Say 'Don't Ask' Doesn't Work
http://www.nytimes.com/2003/12/10/national/10GENE.html

>>
By JOHN FILES

Published: December 10, 2003

WASHINGTON, Dec. 9 — Three retired military officers, two
generals and an admiral who have been among the most senior uniformed
officers to criticize the "don't ask, don't tell" policy for
homosexuals in the military, disclosed on Tuesday that they are gay.

They say he is a troll, but his questions are good ones.

I think a real newbie should buy something very cheap and programable on ebay. After getting some experience, then go shopping for a serious scanner.

Man, please stop posting this nonsense. You're not fooling anybody. Since nobody would use his or her own name to flood newsgroups with this garbage, it's obvious you're not the real "Kevin Souter." Instead, you're using false headers with his name, hoping others will get mad at him for the messages you've actually posted. Since anyone with any newsgroup experience knows this, all you're really doing is causing others to sympathize with him and get mad at you.

Dwight Stewart (W5NET)

In radio work 3 db is not really that much for most applications. It can be going from 1 watt to 2 watts or 500 watts to 1000 watts. Also you will not be getting 3 db differance as to go the first 10 feet you loose .8 db, to go 20 feet more (the first 10 plus the next 20) it is only 1.6 db differance.

MOTOROLA

TRUNKING INFORMATION

CREATED 11-14-95
@NEW INFO UPDATE 03-20-96
@NEW INFO UPDATE 1-8-97 NEXTELL CALLING
ADDL INFO UPDATE 5-19-97 NEXTEL LIMITED TOWER LIFE
REMAINING

SOME PEOPLE NEED TO UNDERSTAND THAT
A: 800MHZ SCANNERS CAN RECIEVE TRUNKING CONVERSATIONS
B: TRUNKING IS NOT A FORM OF ENCRYPTION
C: IF A RADIO IS TRUNKING WITH A SYSTEM BUT NOT CAPABLE OF KEYING
IT UP
IT IS A SCANNER.

MUCH INFORMATION ABOUT MOTOROLAS TRUNKING SYSTEMS (PRIMARILY
CUSTOMER
INFO) IS KEPT IN ILLINOIS. TO ACCESS THIS INFORMATION YOU NEED TO CALL
THIER CUSTOMER SERVICE NUMBER 1-800-247-2346. TO START OF THE
CONVERSATION
YOU WOULD NEED TO SAY , HI THIS IS (JOE) FROM (ROCKFORD SVC CENTER) I
NEED
FLEET INFORMATION ON SYSTEM (1622) FLEET (301),I NEED TO KNOW FLEET
NAME
DATE OF ACTIVATION AND SUBFLEETS ACTIVE, PLEASE. -THERE ARE OTHER
APPROACHES
TO GETTING FLEET INFO-
@new info motorola has sold most of its 800mhz privacy plus systems
to
nextell communications as of 01-01-96 the nextell phone
#1800-969-2929
the software nextell uses is different than motorolas it is not as
free
flowing of information. it doesnt appear to be able to tell you
somethings
like positions of systems in radios it lists systems, there are other
things
i need to find out about it,also the 2 companys seem to have
tightened
theyre security on information.,IF YOU EVER CALL UP ASKING FOR SYSTEM
INFORMATION AND BEFORE THE PERSON CAN LOOK IT UP HIS OTHER PHONE
RINGS,
BE CAREFUL THERE IS A 90% CHANCE THE CALL IS BEING MONITORED BY

SECURITY
AND HE IS BEING TOLD ALL ABOUT HOW YOU CALL IN ASKING FOR THIS
INFORMATION
I SAY THANK YOU AND HANG UP RIGHT AWAY....(SOUNDS PARONOID? OR EVEN
STUPID?)
(IF YOU LISTEN TO THE BEGINNING OF THE CALL IT SAYS YOUR CALL MAY BE
MONITORED)
NEAR THE END OF MY CALLING MOTOROLA THIS HAPPENED TO ME 3 TIMES,THERE
WAS
ALSO A TIME WHEN I CALLED I ASKED A TRUE QUESTION ABOUT MY SERVICE,
HIS DESK PHONE RANG, HE SAID SIR, MY SUPERVISOR SAYS THAT YOU WILL
NEED
TO CALL NEXTELL FOR THAT INFORMATION.

(5-19-97) AS OF FEBUARY OF 1997 NEXTEL ANNOUNCED THAT THE DAYS OF
ITS
ANALOG TOWERS WERE NUMBERED, IN OTHER WORDS NEXTEL WANTS THE
FREQUENCYS
THAT THEESE ANALOG TOWERS USE AND RE USE THEM FOR THE NEW DIGITAL
TOWERS
THAT THEY WANT TO MOVE TO. THE MOTOROLA SYSTEMS WERE DESIGNED TO
OPPERATE
ON ANY NUMBER OF CHANNELS FROM 5 TO 20 SO NEXTEL WILL START
REDUCING
AVALABLE VOICE CHANNELS ON EACH TOWER AS NUMBWER OF USERS DECREASE
ON THE
TOWER, NEXTEL IS NOT ALLOWING ANY NEW CUSTOMERS ON THE SYSTEMS. AS
OF
FEBUARY 1997 WE HAVE HEARD RUMORS THAT THEY WILL SHUT DOWN MOST OF
THE
TOWERS IN 1 YEAR OR LESS BUT I HAVE NOT HAD ANY CONFIRMATION OF AN
EXACT
DATE BUT I CAN SAY THAT SYSTEM 1622 IS STILL HEAVILY LOADED SO I
KNOW THAT
NEXTEL IS MAKING A GOOD PROFIT FROM 1622.
NEXTEL SAYS IT WILL BE OFFERING USERS INCENTIVES TO TRADE IN THEIR
ANALOG
EQUPMENT FOR A GOOD DEAL ON THE NEW DIGITAL. I HAVE NOT SEEN ANY
ADVERTISMENTS YET IN ANY OF MY BILLS YET. IT WILL BE A SAD DAY WHEN
THEESE
SYSTEMS GET SHUT DOWN....EACH ONE IS LIKE A FAMILY EACH WITH ITS
OWN
UNIQUE PERSONALITY,CHANNELS,USERS,SYSTEM ID. MOST OF THEESE SYSTEMS
HAVE BEEN IN OPPERATION FROM AROUND 1984. IF YOU LOOK AT THE
CONTROL
CHANNEL ORDER ON MOST OF THEM, THE LAST 4 DIGITS OF FREQUENCY ARE
THE SAME
THEESE CHANNELS WERE PICKED WHEN THE 800 MHZ BAND WAS SO UN CROWDED
THAT THEY HAD THAT CAPABILITY. I HAVE ALSO SEEN WHERE A COMPANY HAD
BEEN

A FAIRLY ORIGIONAL USER OF THE SYSTEMS IN AN AREA YEARS BACK AND
HAD
MULTIPLE SYSTEMS WITH THE SAME FLEET NUMBER ON EACH SYSTEM,IF YOU
THINK
ABOUT IT THE FLEETS WERE ASSIGNED WHEN ALL THE SYSTEMS WERE NEW IN
AN
AREA. NOW IF A PERSON WERE TO WANT MULTIPLE SYSTEMS TNEY MAY GET AN
ASSORTMENT OF FLEETS AMONG ALL THE SYSTEMS THEY WANT..EXAMPLE
FLEETS 101,200,30D,177,404.... ALL DIFERENT.

YOU CAN OBTAIN INFO IN DIFFERENT WAYS, THE KEYS TO ANY SYSTEM IS
FIRST, SYSTEM NUMBER EX. 1622 ROCKFORD 2. WITHOUT SYSTEM NUMBER YOU
CAN GET THE SYSTEM NUMBER WITH A SERIAL NO. FROM A RADIO ON THAT
SYSTEM.
WITH SYSTEM NUMBER YOU CAN GET FLEET INFORMATION BY NAME OF FLEET LIKE
SAY (I NEED TO FIND FLEET INFORMATION BY SYSTEM AND NAME, SYSTEM 1622
THE CUSTOMER NAME IS PEPSI-COLA) THIS WILL YELD PEPSI-COLAS FLEET NO.
NO OF RADIOS PROGRAMED, NO. OF RADIOS ACTIVE,SERIALS FOR ALL PROGRAMED
RADIOS,NO.OF SUBFLEETS PROGRAMED AND ACTIVE,FLEET ACTIVATION DATE
LAST ACOUNT ACCESS(LAST TIME THEY TURNED A RADIO OR SUBFLEET ON OR OFF

IF YOU HAVE A SERIAL NO. YOU CAN GO THIS ROUTE,
(I NEED TO CHECK FLEET INFORMATION ON A RADIO, SERIAL NO. 626AMQ1134)
YOU THEN AN ASK WHAT SYSTEM(S) IS THE RADIO ON, WHAT FLEET(S)
SUBFLEET(S)
WHAT IS IN THE RADIO CHANEL SELECTOR POSITIONS, WHAT ITS CALLALERT ID
IS,
CALLALERT IS USED IN PRIVACY PLUS SYSTEMS FOR PAGING, IF YOU HAVE A
RADIO
ON THE SAME SYSTEM YOU CAN PAGE THAT RADIO, IF YOUR RADIO IS SET TO
UNLIMITED CALLALERT, EVEN IF THAT RADIO IS NOT IN YOUR FLEET! I DO IT
FOR
AMUSEMENT SOMETIMES.SOMETIMES ASK IF THERE IS ANY OTHER INFO ON THE
RADIO
COULD YELD SOMTHING NEW TO ASK FOR NEXT TIME YOU CHEK A SERIAL.

@new info (11-29-96)
BOB GAVE ME THE DEALER LINE TO NEXTEL, HE SAYS THEY GIVE HIM INFO
HASSLE FREE. THE DEALER NUMBER IS 1800-353-3888. GOOD LUCK!
CALL THE DEALER LINE SIMILAR TO THIS, HI I NEED SYSTEM INFORMATION
ON
ROCKFORD UTILITYS, SORRY I DONT HAVE THE ACCOUNT NUMBER HANDY. OK
SIR
LET ME CHECK,,,,, OK FOR YOUR REFRENCE THE ACCOUNT NUMBER IS
96048912
AND THEY ARE ON SYSTEM 0525 FLEET 605. YOU MAY THEN ASK, HOW MANY
UNITS
ARE ACTIVE. WELL SIR LET ME SEE,,,, I FIND 34 UNIT IDS(MEANS 34
UNITS)
OK THANK YOU FOR YOUR HELP, BYE. THEY MASK WHO IS THIS IN THE
MIDDLE OF

THE CONVERSATION ,I SAY JOE FROM TCR THEY SAY OK.

@ADDL INFO (1-9-96)
YOU CAN CALL UP NEXTELLS DEALER LINE AND GET CONTROL CHANELS AND
CONNECT TONES ON SYSTEMS LIKE THIS.
HI THIS IS JOHN FROM COMCOAST I NEED CONTROL CHANELS AND
CONNECT TONES FOR SYSTEM 1622. ok sir ill be back in a
minute,,,,,,
ok sir here is your info,,,,,,, . IDF YOU ARE EVER ASKED WHY YOU
NEED THIS INFO SAY TH PROGRAM UP YOUR 2670 SERVICE MONITOR.

BOB SAYS THAT MOTOROLA MAKES A SERVICE MONITOR THAT IMMITATES A
TRUNKING CONTROLER THE MODEL IS 2670,HE SAYS IT USES A DATA CH.
IT ASSIGNS FREQUENCYS FOR DISPATCH AND PHONE, PRIVATE CALL
AND CALL ALERT. YOU CAN SET UP A SYSTEM ID AND FLEETS AS WELL AS
SUBFLEETS WITH UNIT IDS, THAT WAY YOU CAN TEST A RADIOS
FUNCTIONABILITY
ON A SYSTEM. WHAT THIS MEANS TO ME IS THAT IF YOU ARE EVER ASKED
WHY YOU NEED TRUNKING INFORMATION YOU SAY THAT YOU ARE PROGRAMING
UP YOUR 2670 AND IT REQUIRES THAT INFO!!!

YOU MAY,IN YOUR SURFING FOR INFO FIND A "SHARED FLEET".
TO MY KNOWLEDGE MOTOROLA ONLY USES THIS WHEN SEVERAL COMPANYS NEED TO
TALK TOGETHER, EXAMPLE SYSTEM 1622 FLEET 21B IS SHARED BY WASTE
MANAGEMENT AND
BATH FLOORS YOU CAN ASK (WICH SUBS ARE USED BY WASTE MGMT AND WIH BY
BAST FL..)
MOTOROLA WOULD SAY WASTE MGMT USES 1 2 3 4 6 7 AND BATH FLOORS USES 5
MOTOROLA MAY USE SHARING FLEETS TO FIT MORE USERS ON A SYSTEM IF THAT
SYSTEM
IS RUNNING OUT OF UNUSED OR INACTIVE FLEETS.

@NEW INFO MOTOROLA/NEXTELL DO SHARE FLEETS ON PACKED TOWERS, IN FEB
96
NEXTELL TOSSED A TOWING COMPANY ON MY PRIMARY FLEET,SUBFLEET 3
THEY DID NOT, ACORDING TO THIER INFO PROGRAM THE TOWING RADIOS FOR
MY SUBS 1,2
BESIDES MY FLEET IS NOT THIER PRIMARY ANYWAY, I THINK I HAVE HERD
THEM ON
THAT SUB 3, TWO TIMES JUST CALLING FOR ANOTHER UNIT, NO CONVERSATION
HAS
TAKEN PLACE, I USUALLY LISTEN ON FLEETWIDE SETTING WICH ALLOWS ME TO
HEAR ANY
ACTIVITY ON ANY SUBFLEETS ON MY FLEET (FLEETWIDE IS SOMTHING THE
DEALER
CAN PROGRAM IN THE RADIO, AT LEAST ON THE MTX-8000. IT IS CONSIDERED
AN
ADDL CHANNEL.) A GOOD EXAMPLE OF A PRIME SPOT FOR THEM TO DECIDE TO
SHARE
A FLEET IS IF YOU HAVE (JOES PLUMBING) USING FLEET 30E SUB 1
AND HE HAS ONLY BEEN USING SUB 1, HE HAS NEVER USED SUBS 2 OR 3

HE HAS HAD SERVICE FOR AROUND 2 YEARS, NEXTELL WOULD PROBABALLY SAY
THEY ARE GOING TO SHARE FLEET AND THROW SOMEONE ON SUB 2 OR 3.
REMBER THAT A COMPANY LESS THAN 16 RADIOS WHO HAS LESS THAN 3 SUBS
IS ON AN "A" SIZED FLEET.

MOTOROLA, FROM WHAT I HAVE FOUND WILL KEEP A FLEET INACTIVE FOR
AROUND
2.5 YEARS, OTHER FACTORS COULD BE LOADING(IF THE SYSTEM GETS LOTS OF
NEW
COMPANYS OFTEN)SAY JOE BLOW GETS A FEW MTX-8000'S ON SYSTEM 1622 FLEET
20F
ON 11-14-95. IN 6 MONTHS JOE HAS HIS SERVICE TURNED OFF FOR ALL
RADIOS.
SEVERAL THINGS CAN HAPPEN FROM HERE, IF JOE LEAVES THEM OFF FOR MORE
THAN
3 MONTHS JOE WILL PAY A RE SIGNUP FEE OF 50.00 (IN ROCKFORD AREA) BUT
THE FLEET
WILL STILL BE IN HIS NAME. SAY HE LEAVES THEM OFF FOR 3 YEARS,AND
MOTOROLA
HAS RE ASSIGNED THE FLEET,TWO THINGS HAPPEN, 1. TO YOUR BENIFIT,IF HE
SOLD
1 OR MORE OF THEM TO YOU YOU CAN NOW LISTEN TO THE NEW COMPANY, UNLESS
YOU
TRANSMIT WHEN THEY HAVE A FREQUENCY AND SAY ANYTHING, THEY DO NOT KNOW
THAT
YOUR RADIO IS PROGRAMED FOR THEIR COMPANY, OR THAT ANYONE IS
LISTENING.
BE SMART DONT KEY UP AND SAY ANYTHING! 2.MOTOROLA,WHEN THE FLEET WAS
REASSIGNED MAKES ALL RADIOS PROGRAMED FOR THAT FLEET BEFORE IT WAS
REASSIGNED
LIST ON THIER COMPUTERS WITH DUMMY FLEET INFO SUCH AS SYSTEM 4F3A
FLEET FFF
SO, IF YOU EVER LOOK UP A SERIAL AND IT COMES UP WITH DUMMY SYSTEM
INFO
(THE MOTOROLA PERSON SHOULD SAY THAT IT IS A DUMMY SYSTEM) THAT MEANS
THAT RADIO
PROBALLY IS LISTENING TO A NEW COMPANY, (READ THE RADIO TO FIND OUT
THE
ACTUAL FLEET AND SYSTEM INFO, OR ON TRAXARS AND MOSTARS ORIGINAL
PROGRAMING
FROM THE FACTORY IS ON A LABEL WITHIN THE RADIO COVER).

I THINK THAT MOTOROLA WILL DELETE FLEET NAME PRIOR TO REASSIGNMENT
SOME FLEETS COME UP AS DELETEED OR NOTHING, CHECK ON THEM OCASIONALLY
THERE MAY BE A COMPANY ON THEM. EXAMPLE SYSTEM 0129 FLEET 210 "DELETED
FLEET"

ANOTHER ODDITY I HAVE COME ACROSS IS A "ROAMER FLEET"
THIS IS A FLEET SET ASIDE FOR CUSTOMERS WHO USE RADIOS ONLY PROGRAMED
FOR
INTERCONECT, NO SUBFLEETS (MOTOROLA ADVISES ROAMER FLEETS CHANGE USERS

OFTEN)
EXAMPLE SYSTEM 0129 FLEET 10A "ROAMER FLEET"

@new info as of 3-10-96, nextell is using the subfleets on roamer fleets
for companys,as well as phone use. IT MAY STILL LIST AS A ROAMER FLEET BUT
THERE COULD BE AN ACTIVE BUSINESS USING ITS SUBFLEETS, IT APPEARS MOTOROLA
AND NEXTELL HAVE A HARD TIME IDENTIFYING THE SUBLFEET USERS OF A ROAMER
FLEET,THIS COULD BE A GOOD PLACE TO HIDE IF YOU EVER GET ASSIGNED A ROAMER FLEET.

SEVERAL ANGLES I HAVE BEEN LOOKING AT ARE , A RADIO MAY NOT KNOW WHAT FREQUENCYS IT IS TO USE TO TALK OR LISTEN ON, IT MAY BE TOLD WHAT FREQ. TO GO TO EVERY TIME IT IS GRANTED ACCESS TO THE SYSTEM. THE ONLY FREQUENCYS THAT SEEM TO BE IMPORTANT TO THE RADIO ARE CONTROL FREQUENCYS(DATAS).
EVEN THE OLD TRAXARS AMD MOSTARS, THE ONLY FREQUENCYS PRINTED ON THIER LABELS
ARE CONTROL FREQUENCYS (DATAS).AND I HAVE SEEN MTX-810 SOFTWARE
THE ONLY FIELD FOR FREQUENCYS IS CONTROLS AND ONE FOR FAILSOFT, BUT NO OTHER
KNOWN FREQS.
(11-25-96) THE ABOVE PARAGRAPH IS TRUE THE RADIO IS TOLD WHAT FREQ TO GO
TO WHEN EVER YOU KEY UP. THE SYSTEM USES 3 DIGIT FCC IDENTIFIERS
FOR 500 FREQUENCYS SO INSTEAD OF THE SYSTEM SAYING, GO TO FREQUENCY 864.4125 IT SAYS GO TO 235 , YOU CAN SEE IT TAKES LESS DATA
TO SEND OUT THE INFORMATION USING THE FCC CODE OF THE FREQUENCY.
THE RADIOS KNOW THE FCC CODE TABLE .

(11-25-96) I HAVE BEEN TOLD THAT THE FLEETWIDE SETTING ON A PRIVACY PLUS SYSTEM IS SUBFLEET 00 OF A PERTICULAR FLEET.
WICH MEANS IF YOU LISTEN TO SUBFLEET 00 OF A FLEET YOU WILL HEAR ALL THE
SUBFLEET ACTIVITY ON A FLEET. (INFORMATION PROVIDED BY 315)

(11-29-96) ROBERT SAYS THAT HE THINKS THE SYSTEM ASSIGNS TWO RADIOS TO
A TEMPORARY FLEET AND SUBFLEET WHEN THEY BOTH ENTER PRIVATE CALL MODE
WICH MEANS IF YOU KNEW THE TEMP FLEET YOU COULD HEAR ALL PRIVATE CALL
ACTIVITY (UNCONFIRMED)
(5-19-97)I HAVE CONFIRMED THRU LISTENING TO THE SYSTEM ALL CALL
FLEET 000 SIZECODE Q THAT YOU HEAR ALL SYSTEM FLEET ACTIVITY
OF ANY FLEET ON THE SYSTEM (THE BEST TIME TO USE THIS FLEET TO

LISTEN
IS AT NIGHT WHEN THE SYSTEM IS IDLE!) BUT WHEN I LISTEN TO
THAT FLEET
WHEN THE SYSTEM IS IDLE AND KEY UP ON PRIVATECALL I DO NOT
HEAR
THE PRIVATECALL CARRIER ON THE FLEET 000 SIZE Q WICH MEANS
THAT
THE SYSTEM DOESNOT USE TEMPORARY FLEETS TO OPPERATE
PRIVATECALL.

(11-26-96) I HAVE FOUND A FORMULA FOR FIGURING OUT THE FLEET THAT
A
CALL ALERT IS USING IT WORKS TWO WAYS
IF YOU HAVE A FLEET AND YOU WANT TO KNOW ITS STANDARD CALL ALERTS
TAKE THE FLEET EX. 013 CONVERT IT TO DECIMAL THEN TIMES IT BY 16
THAT GIVES YOU THE STARTING CALL ALLERT FOR THAT FLEET, ADD 16 TO
THAT
AND THAT TELLS YOU THE LAST CALL ALERT IN THAT FLEET.
(5-19-97) I THINK THIS FORMULA ONLY WORKS FOR "A" SIZE FLEETS

IF YOU HAVE A CALL ALERT AND YOU WANT TO KNOW WHAT ITS FLEET IS
TAKE THE CALL ALERT AND DIVIDE IT BY 16 THEN TAKE THE RESULT AND
CONVERT IT TO HEX THE RESULT WILL BE THE FLEET!

ROBERT THINKS THAT WHEN YOU PAGE A RADIO THAT THE SYSTEM CONVERTS
THE
PAGE TO A UNIT ID OF THE RADIO ON THE FLEET, IN OTHER WORDS YOU
CANT
BE PROGRAMED ON FLEET 100 AND SAY YOUR RADIO HAS CALL ID 000001
PROGRAMED
FOR THAT RADIO ON THAT FLEET BECAUSE WHEN YOU TRIED TO PAGE THAT
RADIO
THE SYSTEM WOULD PAGE FLEET 000 UNIT ID 001 (THIS WOULD BE TRUE
FOR
TYPE 1 SYSTEMS. POSSIBLY TYPE 2 OR 2I)
(5-19-97) THE ABOVE INFORMATION IS TRUE ABOUT TYPE 1.

Then they shouldn't be trying to enforce such laws or assume that something is
illegal just because they don't like it. They have no authority to enforce a
law that doesn't exist.

> What you DDM should do is stop being a nut and start being polite, just

The Radio Shack web site has a two day sale
December 12-14 2003 this
week end. PRO-96 is on sale for $499.99 or
is this going to be it's "regular" price point?
The PRO-95 is still on sale for $149.99
Check out the software at
<http://www.starrsoft.com/software/win96/>

<http://www.starrsoft.com/freeware/Win95/default.asp>

and the cable:

3704. Re: OLD motorola trunking information

Newsgroup: rec.radio.scanner
Date: 2003-12-12 09:48:16 UTC
From: jmacdon <jmacdon@mitre.org>
Message-ID: <3FD98EE0.713188C3@mitre.org>
Source record: 23907

Jack;
Thanks for filling us in on what happened to the Motorola trunking
systems
back in '97. There was a small 800 Mhz trunking system around southern, NH
with a security company and taxi company on it. The talk groups were so
lightly used and at different times of the day, following conversations
with a conventional 800 MHz radio was easy.

This 800 MHZ trunking system went dark, about 1990. It took several years
to find the taxi co. again.
So when they appeared with UHF antennas, the ones with a loading coil in
the middle, mounted on the taxi cabs. A search of the taxi allocation at
452 MHz showed there repeaterized operation. This repeater is shared
with a plumbing operation., and is licensed to a dealer in the next town
over. Also they appear to be using a non standard squelch tone. Never did
find where the security outfit went!
Jim

In article <5Dayb.252403$mZ5.1876750@attbi_s54>, NoSpamPlease@aol.com
says...
> Why does it have to be about damn property values?

Fairly simple, actually:

If your property value increases, your equity increases. If you have
more equity, then there's more value that you can borrow against.

In article <bqbajj$hn5$1@news1.kornet.net>, brendad@shinbiro.com says...
> For starters, most hams that put up towers with elaborate antenna systems
> would take them down when they moved (unless they became a silent key),
> because these things are not petty investments, they cost a lot of money.
> Some installations cost more than a new mid-sized car.

True. I've seen some pretty elaborate antenna farms, even here in
suburban Orange County, CA -- some even in my neighborhood. (Only part
of our neighborhood is condos, the rest being single-family residences
(houses), and the latter have some pretty nice antenna installations.)

> The installation of
> the tower itself is held to much higher standard by law than the house
> itself is.

Sad but true.

> And again, unlike someone who puts up an old car on blocks, or paints their
> home in rainbow glow paint, hams perform a public service. There currently

At least, we hope it's still "in the works." How long has that been
rattling around the halls of Congress now, two years? Any bets on which
comes on the scene first in the US: a code-free amateur radio service,
or a PRB-1 bill to cover CC&Rs?

Still around, this is my favorite time of year for Surf Fishing, love this cool weather, after all I"m from the cold north....

Usually have my BC250 with me on the beach listing to the Offshore ranges and carrier activity this past week, its amazing what you can hear with just a rubberducky antenna.....

I'm alive and well....

Can anyone please recommend one reasonably current good book for a novice to learn more about the radio hobby in general?

For instance, a little radio frequency theory, some basic antenna discussion, maybe some coverage of amateur bands, etc.

Something technical enough to be a good shelf reference.

Thanx,
Bob

From what I have seen and read, $499.99 is the scanners regular price. If it indicates a 2-day sale, then they are lying; either that, or they are raising the price because the demand was higher than they expected..

On sale? That's still full-price as far as I've seen. :-)

I called my local Radio Shack about 2 weeks ago trying to locate the Pro-96
"anywhere in the state of New Mexico". The clerk typed away on his computer
for a couple minutes and then said, "I don't see any in stock anywhere in
the United States." So I ordered it over the web site.

Try ARRL's "Now You're Talking" at Radio Shack, Bob. This is the study guide for the "Technician" Amateur Radio license, but the information easily applies to radio in general. The book covers each of the things you mentioned above, plus a lot more. If you want even more than that, get all three Amateur Radio license study guides (Tech, General, and Extra).

3724. F.S. Yupiteru MVT-3300EU SCANNER

Newsgroup: rec.radio.scanner
Date: 2003-12-12 22:27:45 UTC
From: bobar8@aol.com
Message-ID: <20031212172745.15352.00000777@mb-m03.aol.com>
Source record: 23927

The MVT-3300EU from Yupiteru covers most of the useful bands in the VHF and UHF spectrum. It has 200 memories as standard with a range of band and security channels as well. It has functions normally associated with more expensive sets such as pre-setting the receiving mode and frequency step,
Auto-Write and Search-Pass memory functions. There is also a Decipherment function to receive certain scrambled communications.
Specifications
66 - 88MHz
108 - 170MHz
300 - 470MHz
806 -1000MHz
NFM, AM
5 Steps (5/6.25/10/12.5/25kHz)
200 Memories
100 Search Pass memories
10 band memories (user rewritable)
10 Priority channel memories
Scan/Search speed 30 per sec.
Sensitivity AM 0.7ï¿½V (S/N 10dB min) NFM 0.5ï¿½V (12dB SINAD)
Audio output 100mW into 8 Ohms
4 x AA batteries (not supplied)
Size 59 x 152 x 32mm
Weight 215g.
Accessories Supplied.
Flexible antenna, Earpiece, Handstrap, Integral desktop stand
unblocked 800 mhz coverage
excellent condition w/ box and manual

$225.00

Bob;
While your at Radio Shack, take a look at "Police Call". The
first section is a basic explanation of VHF- UHF and Trunking
two-way radio. Its a nice supplement to ham radio books
and you will get a frequency guide for your area of the
country. Left over" 2003 Police Call's may be on clearance!

Dave;
Your right, I went back and checked there web site,
they do not have a red "SALE" tag on the price point, for the PRO-96.
Also the two day sale this week end at Radio Shack IS STORE and/or site
WIDE.
I'm sorry this was not emphasized in the original post.

3732. Here is My Resume. Who Am I?

Newsgroup: rec.radio.scanner
Date: 2003-12-13 12:03:40 UTC
From: ksouter@oryyfbhqu.arq
Message-ID: <3fe8fefe.120831826@oryyfbhqu.arq>
Source record: 23935
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,rec.radio.shortwave

EDUCATION AND EXPERIENCE:

LAW ENFORCEMENT:

I was arrested in Kennebunkport, Maine, in 1976 for driving under the
influence of alcohol. I pled guilty, paid a fine, and had my driver's
license suspended for 30 days.

My Texas driving record has been "lost" and is not available.

MILITARY:

I joined the Texas Air National Guard and went AWOL. I refused to take a
drug test or answer any questions about my drug use.

By joining the Texas Air National Guard, I was able to avoid combat duty in
Vietnam.

COLLEGE:

I graduated from Yale University with a low C average. I was a cheerleader.

PAST WORK EXPERIENCE:

I ran for U.S. Congress and lost.

I began my career in the oil business in Midland, Texas, in 1975.

I bought an oil company, but couldn't find any oil in Texas.

The company went bankrupt shortly after I sold all my stock.

I bought the Texas Rangers baseball team in a sweetheart deal that took land
using taxpayer money.

With the help of my father and our right-wing friends in the oil industry
(including Enron CEO Ken Lay), I was elected governor

of Texas.

ACCOMPLISHMENTS AS GOVERNOR OF TEXAS:

I changed Texas pollution laws to favor power and oil companies, making
Texas the most polluted state in the Union.

During my tenure, Houston replaced Los Angeles as the most

smog-ridden city in America.

I cut taxes and bankrupted the Texas treasury to the tune of billions in
borrowed money.

I set the record for the most executions by any governor in American

history.

With the help of my brother, the governor of Florida, and my father's
appointments to the Supreme Court, I became President after losing by over
500,000 votes.

ACCOMPLISHMENTS AS PRESIDENT:

I am the first President in U.S. history to enter office with a criminal
record.

I invaded and occupied two countries at a continuing cost of over one
billion dollars per week.

I spent the U.S. surplus and effectively bankrupted the U.S. Treasury.

I shattered the record for the largest annual deficit in U.S. history.

I set an economic record for most private bankruptcies filed in any 12-month
period.

I set the all-time record for most foreclosures in a 12-month period.

I set the all-time record for the biggest drop in the history of the U.S.
stock market.

In my first year in office, over 2 million Americans lost their jobs and
that trend continues every month.

I'm proud that the members of my cabinet are the richest of any
administration in U.S. history. My "poorest millionaire," Condoleeza

Rice, has a Chevron oil tanker named after her.

I set the record for most campaign fund-raising trips by a U.S. President.

I am the all-time U.S. and world record-holder for receiving the most
corporate campaign donations.

My largest lifetime campaign contributor, and one of my best friends,
Kenneth Lay, presided over the largest corporate bankruptcy fraud in U.S.
History, Enron.

My political party used Enron private jets and corporate attorneys to assure
my success with the U.S. Supreme Court during my election decision.

I have protected my friends at Enron and Halliburton against investigation
or prosecution. More time and money was spent

investigating the Monica Lewinsky affair than has been spent

investigating one of the biggest corporate rip-offs in history.

I presided over the biggest energy crisis in U.S. history and refused to
intervene when corruption involving the oil industry was revealed.

I presided over the highest gasoline prices in U.S. history.

I changed the U.S. policy to allow convicted criminals to be awarded

government contracts.

I appointed more convicted criminals to administration than any

President in U.S. history.

I created the Ministry of Homeland Security, the
largest bureaucracy

in the history of the United States government.

I've broken more international treaties than any
President in U.S.

history.

I am the first President in U.S. history to have the
United Nations

remove the U.S. from the Human Rights Commission.

I withdrew the U.S. from the World Court of Law.

I refused to allow inspectors access to U.S. "prisoners
of war" detainees
and thereby have refused to abide by the Geneva
Convention.

I am the first President in history to refuse United
Nations election
inspectors (during the 2002 U.S. election).

I set the record for fewest number of press conferences
of any

President since the advent of television.

I set the the all-time record for most days on vacation
in any one-year
period.

After taking off the entire month of August, I presided
over the worst
security failure in U.S. history.

I garnered the most sympathy for the U.S. after the
World Trade Center
attacks and less than a year later made the U.S. the
most hated country in
the world, the largest failure of diplomacy in world
history.

I have set the all-time record for most people
worldwide to simultaneously
protest me in public venues 15 million people),
shattering the record for
protest against any person in the history of mankind.

I am t he first President in U.S. history to order an
unprovoked,
pre-emptive attack and the military occupation of a
sovereign nation. I did

so against the will of the United Nations, the majority of U.S. citizens,
and the world community.

I have cut health care benefits for war veterans and support a cut in duty
benefits for active duty troops and their families -- in wartime.

In my State of the Union Address, I lied about our reasons for attacking
Iraq, then blamed the lies on our British friends.

I am the first President in history to have a majority of Europeans

(71%) view my presidency as the biggest threat to world peace and

security.

I am supporting development of a nuclear "Tactical Bunker Buster," a

WMD.

I have so far failed to fulfill my pledge to bring Osama Bin Laden and
Saddam Hussein to justice.

RECORDS AND REFERENCES:

All records of my tenure as governor o f Texas are now in my father's
library, sealed and unavailable for public view.

All records of SEC investigations into my insider trading and my

bankrupt companies are sealed in secrecy and unavailable for public

view.

All records or minutes from meetings that I, or my Vice-President,

attended regarding public energy policy are sealed in secrecy and
unavailable for public review.

PLEASE CONSIDER MY EXPERIENCE WHEN VOTING IN 2004.

PLEASE SEND THIS TO EVERY VOTER YOU KNOW.

George W. Bush

The White House, USA

I'm not sure who he is, but I'm hoping that he'll be running for office in 2004. I'll vote for him. He sounds like a guy who'd kick ass. Maybe yours.

3742. Cable and software for Pro-95

Newsgroup: rec.radio.scanner
Date: 2003-12-13 22:11:01 UTC
From: JQ <jq@q.net>
Message-ID: <3fdb8d71$0$14949$61fed72c@news.rcn.com>
Source record: 23945

I just got a pro-95 on sale today, but some things I've seen on the web mention problems with getting software to interface with the scanner.

The guy at the store referred me to the site www.pro-92.com, and he said there's a link on it to the pro-95 software.

On the radio shack website they show cable #20-289 out of stock, and my local store couldn't order it either.

So, is there an easy method to get a cable and software to interface with the pro-95 or should I just return the darn thing?

Thanks!

JQ <3fdb8d71$0$14949$61fed72c@news.rcn.com>...

Is JQ short for Scott the fish man?

^ ... is there an easy method to get a cable and software to
^ interface with the pro-95 ...

I've been using the freeware program WIN.EXE with a cable I bought from Black Bag Software. If you search for "DON STARR" and "WIN.EXE" you'll find the web site, and I think he has a link to Black Bag Software.

Frank

The cable from radioshack does not work, repeat now matter what they said it will not work. Search google for the cable. I am also using the WIN95 software with a cable from a company in california and it works great!

Hi,

Does anybody have a list of ID #'s and their names used by the Fire Departments
in Orange County, California?

Any help would be apprecaited.

Anchor's aweigh,

The Admiral

If you go to the Pro-92 site, on the left you'll see a link for software and one for the programming cable, However, I've saved you that effort, got to this link http://www.starrsoft.com/freeware/win95/default.asp and you can download the Win95 software. There is also a link on this page to various sources for the cable. But have you tried 1-800-THE-SHACK or done a store search for the cable? Both show availability. Go to this link:
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289
and try the product locator by entering your zip code. Just checking using my zip code, I found four stores within 50 miles of my home that have the cable. One is a company store and company stores will transfer stock at no extra cost. So check either resource and you should get a cable.

BTW, another posting says the cable won't work, he's wrong. The cable you mention, P/N 20-289 (gray color), will work to program the 95. The cable he's thinking about is the 20-048 (black), and it won't do the job.

Mark

PS Your local store isn't trying very hard. Do the search, print it out and take it in, embarrasses the clerks no end!

The #20-289 cable from Radio Shack does work. I just bought one on
Thursday and it works fine with my Pro-95. I had to look in 4
different stores before I found the cable.

Check out the following link for more information on cables that can
be used with the Pro-95:
http://www.starrsoft.com/freeware/Win95/Cables/cables.html

At least one flooder "lives" at OnNet DSL in Chicago, and has had IP
address 64.36.36.106 during some of his most recent activities.

I'd look there instead of at Dr. Hambrecht.

Reportedly there is a discussion entitled "State Scanner Laws - Going Too Far?" ongoing somewhere online. Anyone know where?

PBS - NOW (TV show) - excessive secrecy in Washington DC - aired on 12 Dec 2003 on TV2 in Boston - government agencies are refusing to release any info on anything that is remotely tied to security

---

CFLG list - news reports in Orlando Florida are excessively lame because they dont want to scare the tourists, and most viewers are low income entertainment industry workers - there are higher incomes and more media competition in the Miami area

---

SoCalScan list - Orange County Sheriff scandal just broke on TV2 - high ranking PD officer had incident involving son pulled off CAD system so it would be hid from media - this was captured on a taped phone conversation (possibly an I-Call) - Orange County CA encrypts all PD comms

---

DFWScan - discussion of role of videographers at emergency scenes, and public access to public safety radio comms

---

ChicagoCARMA list (or is it CARMAchicago?) - discussuin of using list and ham freqs for incident notification - discussion of posting surveillance ops

---

http://www.openness.org (not sure if it has been updated recently)

All of these items are from December 2003

Peter S

3759. Superstar 3900 F, Modification confusion

Newsgroup: rec.radio.scanner
Date: 2003-12-14 16:37:45 UTC
From: sdltd@hotpop.com
Message-ID: <bri3kpadp1@xuxa.iecc.com>

Hi Everyone,

I have a rig here which is a Superstar 3900 Black and was wondering if anyone could give me some advice?

I have heard that there are simple conversions which can be done to these to get extra frequencies by connecting and disconnecting different points on the circuit board? I have found losts of information on these mods but am unsure what their outcomes mean????

These are the mods which I found on internet, but what do they do or mean?

Open Clarifier
1)Find D75 and R135 and cut one end of them.
2)On the back of the clarifier knob follow the green wire to the PC board. Cut this wire from the PC board.
3)Now Solder this wire to a constant 8VDC source, like the collector of TR41.
4)Take the yellow wire and cut it from the knob. Tape this wire it is not needed.
5)This should make the radio TX/RX on the same frequency.

10 Meter Mod
1) Find IC7 near the PLL chip.
2) Get a SPST switch and mount it in the radio.
3) Solder a wire from one side of the switch to Pin #13.
4) Solder a wire from the other side of the switch to Pin #12.
5) That's it .Put the radio on 'Band D' then flip the switch to jump up to 28.300 to 28.500.

Tweak and peak
Audio Limiter - Cut R249
AM Power - VR13
SSB Power - VR12

If anyone has any advice or experience of doing this could they help?

This radio also has a small fault which the channel display keeps flickering and shorting on and off whenever it feels like it, does anyone know if this could be easily fixed?

Best Regards

Steven

Sorry, perhaps I didn't state my question clearly. I'm looking for their
trunked radio system ID #'s and names. I've found about 50 or so on-line but
I'd bet my life that there's at least 4 times that amount.

Jim, check the part number and color of the cable you bought. You want the gray cable, P/N 20-289. If you got the black cable, P/N 20-048 (usually comes bundled with a CD), then you got or were sold the wrong cable. If you got the 20-289 and it doesn't work, and you are sure that the problem doesn't come from the computer, then you got a bum cable. Many times, the people experiencing problems with cables that should work (and I'm not talking about just the R/S cable) are actually having com port problems. In my case, the HotSync program for my Palm PDA was grabbing and not releasing the com port. Once I disabled that, the cable worked fine. I'd try the cable on different computers before declaring it bad, but if it is, take it back and exchange it.

if you have one, please email me the details. Include the firmware revision of your unit as well, along with your terms.

thanks,

doug

He's the guy that captured Saddam without getting blown by fat white trash.

YES! Well said! (and he isn't going to be impeached, either)

3769. Re: Cable and software for Pro-95

Newsgroup: rec.radio.scanner
Date: 2003-12-14 21:05:34 UTC
From: Mark <markinokla@juno.com>
Message-ID: <je4Db.29$h4.73441@sooner.brightok.net>
Source record: 23872

Well, then I'm going to guess that you were sold the wrong cable. The gray cable, P/N 20-289, has only been available for about two months and the availability has been spotty. Previously, the only cable stocked in the stores has been the 20-048 cable and CD, which is a one-way only cable. When it was available previously from Radio Shack, the two-way cable was a RSU cable, available by special order only and not stocked in stores.

3770. Hoffman Estates and Streamwood Illinois radio frequencies

Newsgroup: rec.radio.scanner
Date: 2003-12-14 21:22:44 UTC
From: mechman4@comcast.net
Message-ID: <31lptvkqhn2s7amsbojrf8cbgq7t5afrk5@4ax.com>
Source record: 23873

Does anyone who lives out in the hoffman estates and
streamwood illinois area know if there is a control frequency?
mechman4

Guess again. Lies won't work here, Kevvy.

GEORGE Magazine, October 15, 2000

The Real Military Record of George W. Bush: Not Heroic, but Not AWOL, Either
By Peter Keating and Karthik Thyagarajan

For more than a year, controversy about George W. Bush's Air National Guard record has bubbled through the press. Interest in the topic has spiked in recent days, as at least two websites have launched stories essentially calling Bush AWOL in 1972 and 1973. For example, in "Finally, the Truth about Bush's Military Record" on TomPaine.com, Marty Heldt writes, "Bush's long absence from the records comes to an end one week after he failed to comply with an order to attend 'Annual Active Duty Training' starting at the end of May 1973... Nothing indicates in the records that he ever made up the time he missed." And in Bush's Military Record Reveals Grounding and Absence for Two Full Years" on Democrats.com, Robert A. Rogers states: "Bush never actually reported in person for the last two years of his service - in direct violation of two separate written orders."

Neither is correct.

It's time to set the record straight. The following analysis, which relies on National Guard documents, extensive interviews with military officials and previously unpublished evidence of Bush's whereabouts in the summer and fall of 1972, is the first full chronology of Bush's military record. Its basic conclusions: Bush may have received favorable treatment to get into the Guard, served irregularly after the spring of 1972 and got an expedited discharge, but he did accumulate the days of service required of him for his ultimate honorable discharge.

At the Republican convention in Philadelphia, George W. Bush declared: "Our military is low on parts, pay and morale. If called on by the commander-in-chief today, two entire divisions of the Army would have to report, 'Not ready for duty, sir.'" Bush says he is the candidate who can "rebuild our military and prepare our armed forces for the future." On what direct military experience does he make such claims?

George W. Bush applied to join the Texas Air National Guard on May 27, 1968, less than two weeks before he graduated from Yale University. The country was at war in Vietnam, and at that time, just months after the bloody Tet Offensive, an estimated 100,000 Americans were on waiting lists to join Guard units across the country. Bush was sworn in on the day he applied.

Ben Barnes, former speaker of the Texas House of Representatives, stated in September 1999 that in late 1967 or early 1968, he asked a senior official in the Texas Air National Guard to help Bush get into the Guard as a pilot. Barnes said he did so at the behest of Sidney Adger, a Houston businessman and friend of former President George H. W. Bush, then a Texas congressman. Despite Barnes's admission, former President Bush has denied pulling strings for his son, and retired Colonel Walter Staudt, George W. Bush's first commander, insists: "There was no special treatment."

The younger Bush fulfilled two years of active duty and completed pilot training in June 1970. During that time and in the two years that followed, Bush flew the F-102, an interceptor jet equipped with heat-seeking missiles that could shoot down enemy planes. His commanding officers and peers regarded Bush as a competent pilot and enthusiastic Guard member. In March 1970, the Texas Air National Guard issued a press release trumpeting his performance: "Lt. Bush recently became the first Houston pilot to be trained by the 147th [Fighter Group] and to solo in the F-102... Lt. Bush said his father was just as excited and enthusiastic about his solo flight as he was." In Bush's evaluation for the period May 1, 1971 through April 30, 1972, then-Colonel Bobby Hodges, his commanding officer, stated, "I have personally observed his participation, and without exception, his performance has been noteworthy." In the spring of 1972, however, National Guard records show a sudden dropoff in Bush's military activity. Though trained as a pilot at considerable government expense, Bush stopped flying in April 1972 and never flew for the Guard again.

Around that time, Bush decided to go to work for Winton "Red" Blount, a Republican running for the U.S. Senate, in Alabama. Documents from Ellington Air Force Base in Houston state that Bush "cleared this base on 15 May." Shortly afterward, he applied for assignment to the 9921st Air Reserve Squadron in Montgomery, Ala., a unit that required minimal duty and offered no pay. Although that unit's commander was willing to welcome him, on May 31 higher-ups at the Air Reserve Personnel Center in Denver rejected Bush's request to serve at the 9921st, because it did not offer duty equivalent to his service in Texas. "[A]n obligated Reservist [in this case, Bush] can be assigned to a specific Ready Reserve position only," noted the disapproval memo, a copy of which was sent to Bush. "Therefore, he is ineligible for assignment to an Air Reserve Squadron."

Despite the military's decision, Bush moved to Alabama. Records obtained by Georegemag.com show that the Blount Senate campaign paid Bush about $900 a month from mid-May through mid-November to do advance work and organize events. Neither Bush's annual evaluation nor the Air National Guard's overall chronological listing of his service contain any evidence that he performed Guard duties during that summer.

On or around his 27th birthday, July 6, 1972, Bush did not take his required annual medical exam at his Texas unit. As a consequence, he was suspended from flying military jets. Bush spokesperson Dan Bartlett told Georgemag.com: "You take that exam because you are flying, and he was not flying. The paperwork uses the phrase 'suspended from flying,' but he had no intention of flying at that time."

Some media reports have speculated that Bush took and failed his physical, or that he was grounded as a result of substance abuse. Bush's vagueness on the subject of his past drug use has only abetted such rumors. Bush's commanding officer in Texas, however, denies the charges. "His flying status was suspended because he didn't take the exam,not because he couldn't pass," says Hodges. Asked whether Bush was ever disciplined for using alcohol or illicit drugs, Hodges replied: "No."

On September 5, Bush wrote to then-Colonel Jerry Killian at his original unit in Texas, requesting permission to serve with the 187th Tactical Reconnaisance Group, another Alabama-based unit. "This duty would be for the months of September, October, and November," wrote Bush.

This time his request was approved: 10 days later, the Alabama Guard ordered Bush to report to then-Lieutenant Colonel William Turnipseed at Dannelly Air Force Base in Montgomery on October 7th and 8th. The memo noted that "Lieutenant Bush will not be able to satisfy his flight requirements with our group," since the 187th did not fly F-102s.

The question of whether Bush ever actually served in Alabama has become an issue in the 2000 campaign-the Air Force Times recently reported that "the GOP is trying to locate people who served with Bush in late 1972 ... to see if they can confirm that Bush briefly served with the Alabama Air National Guard." Bush's records contain no evidence that he reported to Dannelly in October. And in telephone interviews with Georgemag.com, neither Turnipseed, Bush's commanding officer, nor Kenneth Lott, then chief personnel officer of the 187th, remembered Bush serving with their unit. "I don't think he showed up," Turnipseed said.

Bush maintains he did serve in Alabama. "Governor Bush specifically remembers pulling duty in Montgomery and respectfully disagrees with the Colonel," says Bartlett. "There's no question it wasn't memorable, because he wasn't flying." In July, the Decatur Daily reported that two former Blount campaign workers recall Bush serving in the Alabama Air National Guard in the fall of 1972. "I remember he actually came back to Alabama for about a week to 10 days several weeks after the campaign was over to complete his Guard duty in the state," stated Emily Martin, a former Alabama resident who said she dated Bush during the time he spent in that state.

After the 1972 election, which Blount lost, Bush moved back to Houston and subsequently began working at P.U.L.L., a community service center for disadvantaged youths. This period of time has also become a matter of controversy, because even though Bush's original unit had been placed on alert duty in October 1972, his superiors in Texas lost track of his whereabouts. On May 2, 1973, Bush's squadron leader in the 147th, Lieutenant Colonel William Harris, Jr. wrote: "Lt. Bush has not been observed at this unit" for the past year. Harris incorrectly assumed that Bush had been reporting for duty in Alabama all along. He wrote that Bush "has been performing equivalent training in a non-flying status with the 187 Tac Recon Gp, Dannelly ANG Base, Alabama." Base commander Hodges says of Bush's return to Texas: "All I remember is someone saying he came back and made up his days."

Two documents obtained by Georgemag.com indicate that Bush did make up the time he missed during the summer and autumn of 1972. One is an April 23, 1973 order for Bush to report to annual active duty training the following month; the other is an Air National Guard statement of days served by Bush that is torn and undated but contains entries that correspond to the first. Taken together, they appear to establish that Bush reported for duty on nine occasions between November 29, 1972-when he could have been in Alabama-and May 24, 1973. Bush still wasn't flying, but over this span, he did earn nine points of National Guard service from days of active duty and 32 from inactive duty. When added to the 15 so-called "gratuitous" points that every member of the Guard got per year, Bush accumulated 56 points, more than the 50 that he needed by the end of May 1973 to maintain his standing as a Guardsman.

On May 1, Bush was ordered to report for further active duty training, and documents show that he proceeded to cram in another 10 sessions over the next two months. Ultimately, he racked up 19 active duty points of service and 16 inactive duty points by July 30-which, added to his 15 gratuitous points, achieved the requisite total of 50 for the year ending in May 1974.

On October 1, 1973, First Lieutenant George W. Bush received an early honorable discharge so that he could attend Harvard Business School. He was credited with five years, four months and five days of service toward his six-year service obligation.

I have decided to purchase a trunking scanner for myself for Christmas, but after having been out of the hobby for several years, I find that I am rather ignorant what type to get. I live in Tampa and would like to monitor Police, Fire, etc... After researching this on the web, I found a couple of sites that say Tampa uses: Motorola Type II SmartZone Analog/Digital/Encrypted Trunked system. Provided that this is accurate and updated info, what type of scanner should I purchase? Also, what do they mean by, "Analog/Digital/Encrypted"? Is it possbile to listen to Digital or Encrypted these days? Also, if any of you guys live in Tampa can you tell me if this is correct info and/or direct to the correct frequencies to program?

Twisting, MORON? The only one I see twisting is YOU. And a good twister you are too. Can you Samba for me next? How about a little Waltz. Who's your daddy KKKevin? If you have any doubts ask DDDon. That is, if you can find DDDon. He hasn't been around much lately after the bitch slapping he got a few months ago.

3788. BC296D trunking problems

Newsgroup: rec.radio.scanner
Date: 2003-12-15 20:26:02 UTC
From: Tim <scruluse@kessle.net>
Message-ID: <3fde18d9$1_2@127.0.0.1>
Source record: 23891

I've emailed Uniden several times about this but haven't gotten a response so I thought I'd post here. I'm using a Uniden BC296D and have the Tempe PD trunk system set up in bank 1. They are on a Motorola Type II 800mhz analog system. Some days it works as expected, scanning the trunking system and showing the talk group when it lands on something. Other days it scans the bank as conventional channels but doesn't land when there is activity on the channel. I know this because if I put it on a channel manually I can hear the traffic when that channel is active. The display still shows as a motorola type system but scans as conventional channels. I thought maybe there was a control freq that I didn't have programmed even though, according to all the resources I've checked, I had all 10 of the freqs in the bank and configured properly for the Tempe PD Motorola Type II system. I decided to put the Phoenix trunk system in bank 2 and the Mesa Type II digital in bank 3 to test to see if it was just the Tempe, AZ PD trunking system that was doing this. Low and behold, when one isn't working neither are the others. I've tried a different anntenae just in case I was getting bad reception on the control channels for some reason and tried in different parts of my home. It has me stumped. I listened to it all day yesterday and had no problem with monitoring trunk systems. I turn it on this morning and it isn't working. It's been going on like this since I got the BC296D. I previously had a BC245XLT and had not problems at all and used it for a couple years. Any ideas about what could be causing this would be appreciated.

Tim Knight

>
> I changed Texas pollution laws to favor power and oil
> companies, making
> Texas the most polluted state in the Union.

This is a misleading statement. There are many different kinds of
pollution, and this implies Texas is highest overall or in all
categories, which it is not.

> During my tenure, Houston replaced Los Angeles as the
> most
> smog-ridden city in America.

Ozone is only one component of air pollution; there are five others,
according to the EPA. Houston surpassed L.A. in ozone only (not other
kinds of air pollution or pollution overall) and only in 1999-2000.

These will be of interest:

http://www.findarticles.com/cf_0/m1282/13_52/63173670/p1/article.jhtml
"Anyone who claims that Houston's smog problems are equal to or worse
than L.A.'s is misinformed," says Kay Jones, a former EPA official who
now consults on air quality."

http://www.dallasnews.com/texas_southwest/STORY.e9eb444f2b.b0.af.0.a4.cccba.
html
"In some ways, calling Houston America's smoggiest city misrepresented
the relative quality of air in the two cities. Los Angeles' air is
worse than Houston's in other categories. But ozone is the primary
pollutant of concern and therefore gets more attention, officials
said."

http://www.rice.edu/projects/reno/rn/20001102/Templates/air.html
"Houston's number of ozone violation days are actually somewhat fewer
than in the 1980s. The difference seems to be that Los Angeles has
improved more and faster."

Those were older articles. Here's more recent info on ozone
violations:

http://www.lungusa.org/air2001/analysis02.html#woes
State of the Air 2002

"For the third straight year, the top four most ozone-polluted metropolitan areas were in California: Los Angeles-Riverside-Orange County; Bakersfield; Fresno; and Visalia-Tulare-Porterville. The state also has the five most ozone-polluted counties: San Bernadino has been number 1 three years in a row; Kern, comes in at number 2 this year, after claiming the number 3 spot for the previous two years; Fresno moves up to number 3 after two years as the fourth-most polluted county, Riverside is number 4, after two years as the second-most polluted county; and Tulare, number five for the second year in a row."

And overall air quality:

http://www.chron.com/cs/CDA/ssistory.mpl/metropolitan/2056693
Number of days in 2000-2002 when air quality was unhealthy
1. Riverside-San Bernardino, Ca. 445 days
2. Fresno, Ca. 421
3. Bakersfield, Ca. 409
4. Los Angeles-Long Beach, Ca. 255
5. Sacramento, Ca. 163
6. Pittsburgh, Penn. 134
7. Knoxville, Tenn. 109
8. Birmingham, Al. 100
9. Houston, Tx. 94
10. Baltimore, Md. 93

Once again -- ozone (the main component of smog) is not the only kind of air pollution, and probably not even the most dangerous:

http://www.cnn.com/2003/TECH/science/05/01/smoggy.skies.ap/index.html
".... 1999-2001 EPA data, do not take into account a pollutant that's considered more dangerous than smog -- tiny particles of soot that can lodge deep in the lungs and cause heart problems and even death."

http://bicycleaustin.info/articles/pol-exercise-risk.html
"Severe particulate (soot) pollution exists in many urban and desert areas, including Los Angeles, Philadelphia, Chicago, New York City, Salt Lake City and Phoenix, which in 1998 surpassed Riverside, Calif., with the nation's highest particulate levels. Levels of particulate matter in Houston's air do not exceed the limit set in the current national health standard for that air pollutant."

There is no good reason to spread lies and exaggerations about Houston and Texas in the name of politics.

> I am looking for manuals for Bearcat Scanners 210XL & 211.

I have a functioning BC210XL and the owner's manual. I have no
computer scanner, but I will be glad to relay any important
information that the manual contains.

This is what I have for my 18-channel BC210XL. It may or may not apply
to the BC210 or the BC210XLT. The serial number of mine is 212126.

Bands
Frequency Service
30-50 VHF low band (the manual says 32-50)
144-148 2 meter ham band
148-174 VHF high band
420.462-450 70cm ham band
450-470 UHF band
470.0125-512 UHF-T band

Birdies
31.200 41.595 146.400

I can enter frequencies as low as 30 MHz, despite the manual's stating
that the lower end of the coverage is 32 MHz.

The manual basically tells you not to let your scanner get wet and so
forth. The only thing you need to know is how to program frequencies
and how to search within limits. Here are the instructions for those
tasks. It should be enough information to get your started.

> "Programming Frequencies Into the Receiver"
>
> To program 162.255 MHz in channel 14:
>
> PRESS: "Manual" enough times so that channel 14 is displayed
> PRESS: 1 6 2 . 5 5 E
> READ: 14 162.550
> PRESS: "Manual" once, and the scanner steps to the next channel, 15
>
> To program 471.1375 MHz in the next channel (15):
>
> PRESS: 4 7 1 . 1 3 7 5 E
> READ: 15 471.137 (rounded off to 6 places)
>
> **

> "Search"
>
> To search for unknown signals between two frequencies in the same band:
> manually step to the channel you desire to use, (example Channel8),
> then, for example, from 146.500 to 146.950 MHz:

JIP,

You are confusing the issue with the facts. You have the facts.

Jerks who author stuff like that use scattered facts in their BS rants.
Plus, they don't listen to followups like yours.

As Jesus said, "The truth is the truth no matter who says it."

The corollary is true as well: Democrats speak BS even in those rare
instances when they try to tell the truth. Unfortunately, THAT doesn't
happen often enough to have reliable data for a measurable statistic.

it will take a bit longer, but no problems.(dif capacity)
in simple terms without going into too much tech stuff
in almost all applications, they can directly replace nicads.

however, purists will lead you believe otherwise.

mike

3796. Pro-95 scanner: indoor antenna ideas solicited.

Newsgroup: rec.radio.scanner
Date: 2003-12-16 02:24:45 UTC
From: Jackie <buzzygirl@comcastREMOVEME.net>
Message-ID: <N1uDb.401533$275.1274602@attbi_s53>
Source record: 23799

Hi there,

I'm about to get a Radio Shack Pro-95 scanner for Christmas. I live in an apartment, so an outdoor antenna is out of the question. I do have a second-floor balcony, but unfortunately, my apartment faces the landlord's, so ANY antenna out there would be called into question. I am handy with antennas, and have built several for my various ham transceivers in the past. My main question, though, is what *indoor* antennas have you Pro-95 users successfully used to get better reception on your scanners? Either commercially made or homemade would be fine by me (commercially made would be OK if relatively small, and under $75, that is).

My primary scanning freqs, at least initially, will likely be the air bands, local PD/sheriff/railroad bands(150-160 MHz), and once I get the hang of them, the 800 MHz trunked frequencies (there are few of these around here yet, but more are expected to come into being soon).

Thanks all,

Jackie

Lately at 18:20 local time I've been logging 590khz with a strong signal from the car radio. It plays European Classical music. Tonight it ID'd as "Radio Musical Nacional from Cuba."

By 18:50 local time it is drowned out by WDWD Radio Disney in Atlanta, GA.

What was surprising was the Classical music being played by the Cuban sation. I didn't know they were broadcasting serious music like this from Havana. Very loud and clear here in Brevard County, FL. Has anyone else logged it from home or in the car?

> nicads.

That's not been my experience, Mike. In most cases, it has taken considerably longer to charge NiMH batteries in chargers designed exclusively for NiCad batteries. And, in some cases, there have been problems with proper charger operation - ranging from chargers never turning off, resulting in overcharged batteries if not supervised, to some "smart" chargers refusing to charge the NiMH batteries at all.

In general (there are always exceptions), a person should use a charger designed for the batteries being charged. There are many chargers today, internal and external, designed to accept both NiCad and NiMH batteries. Older equipment usually doesn't offer this dual capability.

I've tried charging NiMH batteries in the Pro-43. The batteries never reached a full charge, even after almost two full days of charging. At that point, I gave up and went back to standard NiCads.

I've had great success, and fun, using simple end-fed wire antennas. I've tried a lot of commercial antennas over the years, with very mixed results. In frustration, I decided to try it myself. My first homebuilt indoor wire antenna was a simple piece of thin wire with one end stuffed into the center socket of the BNC connector on the scanner. This worked surprisingly well. My current indoor antenna is a simple connector with a short piece of thin (RG-174U) coax ran to a nearby window (three feet from the desk) with various length wires (each cut to a desired frequency) soldered to the end of the coax. This antenna has worked fairly well, perhaps better than some of the commercial antennas I've used (is also well hidden behind the window blinds and certainly works better than the standard rubber antenna included with most scanners).

Hi,
I am looking for someone that owns this scanner and knows
how it works. I have been looking at one at the local RS and,
(either it is too new or because it is too complicated), they really
don't know how this scanner works. I live in a area that has the
Astro 800 Mhz digital trunking systems. I went to
www.neohioscan.com and found the talkgroups for my county.
What I could not find out is how do you use the talkgroup numbers
there with the scanner. I would like to trunk the frequencies that
I am interested in and be able to select a talkgroup quickly. They
were saying I would have to wait till it came up then lock in on it,
which didn't make a lot of sense. Anyway, if someone that has
some experience with this scanner, I would appreciate any info.
Thanks in advance!!!

-Dennis

Use discretion an the air and help defeat the terrorists. Thatï¿½s the sub title of Bill Sextonï¿½s MARS column appearing in the December issue of Worldradio Magazine. And in it, Sexton, who holds the call N1IN says that Americanï¿½s now face a new concern over the indiscreet transmission of material that my seem harmless but which could be used against us by a terrorist enemy.

By way of example, Sexton cites the well published airline schedules that were used by al-Queda terrorists to coordinate their September 11th attacks on New York and Washington. This is material still available on every airlines website.

Sexton says that we all must all be concerned with what the military calls Operational Security or OPSEC. And he indicates that it is very important for hams to consider what they are saying on the air because you can never tell who listening in. And he says that even the most seemingly innocuous tidbits of information, monitored by hostile ears are probably being handed on to the enemyï¿½s intelligence analysts in the hope it will reveal some weakness or secret that can be used against us.

Sexton covers quite a bit about domestic security and how you can do your part. You will find it beginning on page 50 of the December issue of Worldradio Magazine.

Nonsense. There is no reason whatsoever to spread this level of paranoia and it is fairly irresponsible to do so. I suspect far more ships have been sunk by paranoia and panic than loose lips. Regardless, those with knowledge of sensitive or classified information already know about security issues. What someone else might say on the radio would likely be available from public sources, or is pure speculation, and would therefore not even be considered important from a national security perspective.

Stay below 28 MHz!

> Tweak and peak
> Audio Limiter - Cut R249

Do NOT do this or you will splatter all over. If the modulation seems
weak, try a power mic.

> AM Power - VR13
> SSB Power - VR12

Using a watt meter tune for max, then back it off a bit. If you're going to use an amp, set AM for about 3 watts and SSB for no more than 10 watts for a clean signal.

>

As another poster said, it's probably a cold-solder joint on the back of the display board. If you're good at soldering PC boards, you could touch all the solder points up with a fine-tipped iron and probably fix it.

3811. Re: BC296D trunking problems

Well, it appears that the problem was the antennae. I replaced it with an adjustable antennae I had purchased for my 245xlt and so far it's working great. Uniden might want to take a look at this as I've heard several folks say they've had problems with the antennae that comes with the 296d.

Thank you for the info. It should be enough for the 210. The 211
seems a little different though.

Read the 10th Amendment for the few limited powers the FEDs were
explicitly given.
All other power was left to the states.
All the rest of FED power is economic blackmail upon the States.

i have two
a pro-39 & another one.
both have been used with nimh for 2 years now.
i'm still getting about double the time span per charge compared with
nicads.

agree though, it depends on the charging circuit, but i've always found true
constant current chargers don't seem to mind & give a good level of charge.

cheers dwight

www.trunkedradio.net

Browse around and you'll find all the info you need about trunked systems
including talk group IDs for those systems.

http://marksscanners.home.att.net/

Will help you with programming those talk group IDs. The Pro96 manual is in
the works but you might be able to use another RS manual and adapt if you
need to.

3824. Re: PRO-43 charging NiMH batteries

Newsgroup: rec.radio.scanner
Date: 2003-12-17 06:48:37 UTC
From: Mark <markinokla@juno.com>
Message-ID: <3aTDb.31$h4.75928@sooner.brightok.net>
Source record: 23827

It seems to me that the benefit of the Pro-series scanners is that you don't have to charge the batteries in the scanner. I just pop out one set and drop the other set in. I can charge the batteries (NiMH or NiCad) in a quality charger that uses pulse charging and overcharge protection in a lot shorter time than it takes to charge them in the scanner. And I'm free to take the scanner anywhere I want while the other batteries are charging, I'm not tied to a power source for the 14+ hours it takes to charge the batteries in the scanner. Until such time as Uniden finally gets a clue and drops their proprietary battery packs in favor of a standard AA battery holder, I'll keep buying RS/GRE handheld scanners.

3825. BC860XLT Mod

Newsgroup: rec.radio.scanner
Date: 2003-12-17 10:24:22 UTC
From: HarryC <harryc56_antispam@hotmail.invalid>
Message-ID: <q9WDb.13637$G9.12624@nwrddc01.gnilink.net>

Has anyone done the 200 channel mod to the BC860XLT? I have linked to the mod below and have a couple of questions. First, does the mod require that you connect the (2) points circled on the drawing. It mentions a 'drop of solder here'. Secondly, what does it do...make 10 banks of 20 channels or 20 banks of 10 channels?

http://www.phreak.com/radio/mods/bc860xlt.gif

Thanks
Harryc

Which brand of NiMH batteries are you using, Mike? The batteries I tried were slightly longer than a normal "AA" battery and would not fit into the battery holder properly. I suspect this is a big part of the reason I could not get them to charge. By the way, I think these batteries were made by Panasonic, but can't be certain because they're sold with the "Radio Shack" name on them at Radio Shack stores here.

My end solution was "Hi-Capacity" NiCad batteries (1000 mAh), which have worked well for me (reasonable recharge time and longer scanner use between charges). The "Hi-Capacity" NiCad batteries at Radio Shack are also slightly longer than a normal "AA" battery, but not so much so as to not work properly in the battery holder (just a tight squeeze getting them into the holder).

I may soon be in the market to buy a handheld counter like Optoelectronics makes. Once many years ago I owned (for a very brief time) a Radio Shack handheld counter, and decided very quickly that it was sh*t. Since those days I have often considered buying a good quality handheld counter for use in grabbing new scanner frequencies, and also as a transmitter testing device for my many RF projects.

I would like to spend no more than $450, and I want the best I can get for that money. I don't care about digital right now, as I won't be in the market for a digital scanner for a long time. My main interest is excellent sensitivity, and the ability to autostore captured frequencies to memory. I understand that the Opto Scout (non-digital version) fulfills this nicely, but can I do better yet and still keep under $450? Could I get substantially better sensitivity by going as high as $500 on some other model/company?

Whatever I finally settle on, it MUST be small enough to hide in a inner coat "shoplifter's" pocket so that I can grab freq's without attracting attention to myself.

Can you girls help out?

All excellent points, Mark. I've been happy with Radio Shack scanners for many years. I have other scanners today (including two Ham radios with scanning capabilities), but that old Pro-43 will remain in use until it dies completely.

3831. Do I need a Scanner or Do I need a receiver? This girl is confused.

Newsgroup: rec.radio.scanner
Date: 2003-12-17 12:03:25 UTC
From: ksouter@oryyfbhqu.arq
Message-ID: <400f4589.466630419@oryyfbhqu.arq>
Source record: 23834
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc

I'm wanting to connect my PC to a radio to monitor one particular frequency.

The instructions I've been given say to use a "scanner" but I'm wondering if it maybe less expensive for me to go with a "receiver" set to the proper frequency. Since I'm really only interested in the one setting, I don't see why I'd need a scanner - unless the price of a scanner is about the same as a receiver.

Now if a receiver will work for me, what kind should I be looking for and how do I adjust it to get the frequency I want? I'm assuming I have to install a specific crystal or something. But since I have no idea what I'm doing, I may be way off base. I hope the people here who are knowledeable can help me learn what I need to in order to do this.

The other issue that may be a factor: the instructions I'm following talk about how scanners have a "discriminator" on the ear jack that is where you make the connection to the PC. Would a standard receiver have one too? Anyone have experince with connecting radios to PCs?

DB,

Your {Il}Logic Fails You [.]

NOTE: Some Democrats undoubtedly did Vote for Candidate GW Bush in
2000.
- But then again some Republicans
- - Must have Voted for
- - - Candidate Al Gore in 2004.

FWIW: Members of Both Major Parties: Democrat and Republican.
= = = Evidently did Vote for Ralph Nader and Pat Buchanan.
(Either By Choice -or- By Accident)

Its Called "Democracy" and Inspite of Your Party Affiliation:
= You Have The RIGHT To VOTE For The Candidate of Your CHOICE.
= = Another Basic American FREEDOM !
= = = An American Citizen Has . . .
= = = = The Right, Duty and Responsibility to VOTE [.]

AMERICANISM {The Spirit of America} FIRST:
= = = Overcoming Political Affiliation and Party.
Doing What Is Right For Your Country Out Of Love And Respect For It.

Maybe JFK said it very well in these few Words.
"And so, My Fellow Americans:
- Ask NOT What Your Country Can Do For You
- - Ask What You Can Do For Your Country."
- - - Inaugural Address of President John F. Kennedy
- - - - Washington, D.C. January 20, 1961
NOTE: Not Political Party - But YOUR COUNTRY [.]

FWIW: Many remember these Lines . . .
- - - But do Many Remember the Next Lines ? ? ?

"My fellow citizens of the world:
- Ask Not What America Will Do For You,
- - But What Together We Can Do For The FREEDOM Of Man.
- - - John F. Kennedy President of the United States of America

"Finally, whether you are Citizens of America or citizens of the
world, ask of us here the same high standards of strength and
sacrifice which we ask of you. With a good conscience our only sure
reward, with history the final judge of our deeds, Let Us Go Forth To
Lead The Land We Love, asking His Blessing and His Help, but knowing
that here on earth God's Work Must Truly Be Our Own."

- - - John F. Kennedy President of the United States of America

Where are the Democrat Party Leaders like JFK Today ? ? ?
- And WHY arn't any running for President in 2004 ? ? ?
- - WHY Must We Be Left ONLY with the Choice of GW Bush
- - - and one of the DeMoCratZys in 2004 why, Why. WHY !

TREmendous radio.
Last night I plugged an air-air refueling freq into several of my radios here on the FL east coast in an attempt to hear a certain acft refueling near Sarasota FL on FL's west coast. I could not snag the comms on any of my scanners attached to antennas on my Rohn 25 tower. I decided to opt for my ace-in-the-hole unit, my Pro-43 that I have wall-mounted and using a Radio Shack center-loaded whip.
You guessed it, I was able to copy KC-135 BOLT 24 air-air refueling AC-130U Gunship SPOOKY 41 on 276.5.

Wrong information Sir! The cable designated for the Pro-95 and others works just fine. I lost my blackbag cable somewhere and last week purchased the RS one at $19.95 and it has one feature I really like over the blackbag. You can leave it plugged in! The other cables go to clone mode the instant they are plugged in, not so with the RS.

w4jle <brqf5r$cvon$1@news3.infoave.net>...

^ You can leave it plugged in! The other cables go to clone
^ mode the instant they are plugged in, not so with the RS.

I noticed that if the two conductors are shorted at the scanner then the scanner will go back into operational mode so I installed a shorting switch on my PRO-2053. I flip the switch to open the data port before reading and writing and flip it to short the data port afterwards. This is with the Black Bag cable. I imagine that the RS cable must do the same thing electronically within the interface.

Trying to monitor MDT's? Most all radios don't have a direct
discriminator connection. It's almost a given you would need to modify
the radio to make tyat connection. If you are doing what I think you
are doing, "freq, etc", I assume a scanner is the cheapest radio for
that frequency. "VHF/UHF". Scanners are usually the lower priced
radios of that freq range. There are very few single band, or single
freq radios for those bands, unless they are commercial, or amateur,
etc.. MK

3845. F18 Crash

Newsgroup: rec.radio.scanner

All right, I'll do my best put out as much info as I can!

China Lake Ca. (Ridgecrest, Ca)

About 1600 hours on the fire/crash freq. at China Lake (unknown at this time.)

F18 crashed on the runway, pilot bailed out and only had bruises. I don't think the plane burned because as I came into town from the south I saw no smoke. Engine 3 from C/L was with the plane and the pilot who was walking.
There was a lot of talk about where to take the pilot, city hospital or the base infirmary.

Everything is about over and you know as much as I do!!!!

Burr Patterson, Jr.

Ontario & Ridgecrest Ca. USA

Never heard of them, so must be a European brand. Anyway, they are probably but available on the internet somewhere so I'll keep my eyes out for them.

> got some RS ones as well, 1800mAh

If you got them into the battery holder properly, mine must be an odd one out. Mine were so tight, the ends of the plastic holder itself bent out (losing contact).

Dear Friend of the LAFD:

With so few days remaining before the Holidays, the men and women of the Los Angeles Fire Department want to offer a few simple gift suggestions. We encourage you and your family to consider these inexpensive gifts that keep on giving...

* Smoke Alarms

* Fire Extinguishers (Car and Home)

* Emergency Escape Ladders

* Sturdy Flashlights

* Whistle and Lanyard

* Carbon Monoxide Alarms

* Childproofing and Safety Latch, Gate and Lock Items

* Earthquake and Disaster Supplies (Food, Water, Self Help)

* Cordless Telephone for the Pool area

* New Large Reflective Numerals for a Home Address

* Anti-Scald and Non-Slip Devices for the Bath and Shower

* First Aid Kits

* CPR mini-mask

* Registration for a free LAFD CERT Class

* First Aid and CPR Training

* Sturdy Work Gloves, Goggles and Face Mask

* FRS walkie-talkies

* Scanner Radio to listen to the LAFD in Action

* An automotive safety check by a certified mechanic

* A chimney sweep and inspection service gift certificate

* LAFD Adopt a Fire Station

* A trip to the LAFD Museum and Memorial

And what might you ask, is the _hottest_ holiday gift this year?

LAFD T-SHIRTS and Fire Department Logo Apparel !!

For the person who has *everything*, you can now purchase an authentic LAFD T-Shirt, Cap or Fire Department logo gift item. It's a gift you know they will wear or use with pride. With 100% of proceeds directly supporting Disabled Firefighters, Widows and Orphans, it is also a gift you can feel good about giving. Best of all, it is simple and easy to order!

Click on the link below for more information and to browse the on-line catalog:

http://www.lafd.org/store.htm

Well, you can't say we didn't give you any ideas. Please accept our wishes for a safe, joyous and memorable Holiday Season!

Yours in Safety and Service,

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

Dwight... just now seeing your reply... thanks! This is JUST what I was
looking for. I guess there is more room to experiment with antennas that
just receive as opposed to antennas for ham radios... not as "necessary" to
get that perfect 50 ohms match. I'm sure I'll have fun experimenting.

73 and happy holidays

I'm an amateur radio operator and I like scanning too... course, being stuck in a "no outside antennas" apartment, I don't have much choice but to listen for now. Scanning is fun, something to do on otherwise-boring, quiet nights when you're stuck working at home. I consider scanning, shortwave listening and amateur radio to be three parts of the same hobby that I call "The Radio Hobby". I made that name up myself. ;-)~

73 and happy holidays

Jackie

Exactly. Everything is less critical when no transmitter is involved. So, while one wants to keep the rules in mind with a receive only antenna, there is a lot more room to play around and even flat out break all the rules. My current antenna would probably destroy a transmitter in very short order (I'd hate to guess what the SWR might be), but it works fairly well with my scanner. The wire antenna for my shortwave receiver is even more, um, unusual.

What's wrong with crossdressing? According to the definition I crossdress every time I'm wearing a T-shirt and jeans as opposed to a dress.

Carmen
BTW, if you were capable of reading you'd see that Mr. Hunter is married and *straight* - as are the majority of male crossdressers.

Straight? Hmmmm. I'm "straight" and I sure in hell don't wear any women's clothes. He may be straight in that he hasn't done men yet(?) - but it appears the urge may be coming out. The only "male" (I won't call it a man) I knew - who started to cross dress - went on to taking Hormones and grew breasts. I didn't see them often, so it didn't bother me as to their life style. Was at last contact before I dropped friendship waiting for a meat hacking to replace with a hole. Once they grew their breasts, they came around and tried to make a play for me. END OF FRIENDSHIP. I told them to leave and don't look back. That's been 2 years now.

You - Carmen, being a woman (I GUESS) - how would you like to be in a restroom with a male crossed dressed - in there with you? If my wife was in a restroom and some perv went in there cross dressed, I'd be very pissed off. G.W.

I used to work for Radio shack . Had they not let me go I would have left. Most of the associates there don't know squat about scanners. Im sure there are people there that do know about the scanners they offer through Radio shack. If you're getting the scanner for yourself I encourage you to seek out yahoogroups related to the scanner you own. and groups related to scanning in your area. or area's of interest. DON'T trust someone else to program the radio for you. This is part of the fun.When I got my first trunk tracker..(bearcat 245xlt) I found the freqs for my area. Learned how to program them in my radio. then learned how to find talkgroups.. .If you need a base station scanner that will do both trunking and conventional at the same time. do not get a pro 2052.. I dont know of a base unit that will follow trunked and conventional systems at the same time. It is experience that the pro 9 5portable will follow both trunked and conventional at the same time..I know this for a fact as I was asked to program one as a demo. and it worked fine. trouble was getting the owner to leave the thing on all the time to "show it off". Hope this helps. as for the radio shack motto. it should be " I didn't know that "

Terry or Mike?

Not sure what your name is because two names are posted. Yes I have dealt with JD before, and both times he was very reliable and honest. Once he even delivered the radio to me at my home here in Alabama (he is a trucker right?) If you did not recieve your package I am sure there has to be some kind of explanation and it can be worked out without public flaming in a newsgroup. Did you read his ebay feedback before you bought from him? Did you buy through PayPal? JD is a reputable guy and I dont believe a bad word about him. But, my opinion is just from my personal experience with the guy.

just my 2 cents

alden

RHF,

I'm not going to followup any more after this one, except to say that the dashes and equal signs in your posting confuse me. You must be new to the keyboard.

However, I'm really digging my new IC-R10. Not terribly hot, nor selective, receiving on HF, but it's nice to be able to take a hand-held to work that lets me know if HF or 6m is "hoppin", plus for use as a regular scanner on VHF/UHF.

That being said, since this is a radio group, I also want to say that you should post *before* you start drinking. You sound like a very old person with the mind of a child.

But getting back to the JFK quote, you seem to forget that the purpose of government is to serve the people. The idea of "ask not what your country can do for you..." is completely contrary to the concepts espoused by the framers of the U.S. Constitution. You can compare that document, here: http://memory.loc.gov/const/const.html and then compare it to China's version:
http://news.xinhuanet.com/english/2002-11/18/content_633686.htm

"It also follows that if a government ... itself begins to violate those rights - then it is the right and duty of the people to regain control of their affairs and set up a form of government that will serve the people better." --Thomas Jefferson

Here are some good links to learn more about this country:

http://www.geocities.com/CapitolHill/7970/jefpco21.htm
http://www.kidport.com/RefLib/UsaHistory/AmericanRevolution/DecInd.htm
http://quote.wikipedia.org/wiki/Thomas_Jefferson
http://usembassy.state.gov/posts/rp1/wwwhw022.html

Now, it's important that I say this: whatever you feel about politics or religion, in this country you may say it freely. Yes, that's right, even if I don't agree with you. I've been called a jerk by people whose opinions I deeply respect.

All the best, and 73,
Dave

3886. Ecomm Vancouver, BC Frequencies

Newsgroup: rec.radio.scanner
Date: 2003-12-19 23:09:19 UTC
From: Russell <rustyspam@dccnet.com>
Message-ID: <3FE3851F.6040107@dccnet.com>
Source record: 23789

Hi all,
Well now that most of the Police and Fire have gone trunked and digital
:-(in the lower mainland does anyone have any info on the frequencies
and type of trunked system Ecomm is using here in the Vancouver area?
I have heard some Fire and EHS on my older scanner (867.000ish) but need
to get a trunk tracker to monitor properly. I am mostly interested on
the Fire and EHS anyways as I know Police are mostly (all) digital.
If anyone has any info they can send me on the frequencies and or
trunking type I would really appreciate it!
e-mail address is rdsmith@dccnet.com
Thanks in advance
-Rusty

3887. ID Tracker Update - V2.8.0 - BC296D and BC796D Support

Newsgroup: rec.radio.scanner
Date: 2003-12-19 23:13:51 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <FBLEb.50$2Y.38@bignews4.bellsouth.net>
Source record: 23790
Cross-posted to: rec.radio.scanner,alt.radio.scanner

ID Tracker has been updated to version 2.8.0.

New Features:

- Added support for the BC296D and BC796D.
- Added "Reset All Hit Counts" function.
- Added the ability to enter comments for audio segments.
- Added fast forward, reverse, and volume controls to Audio Playback.
- Added the capability to select and remove multiple audio segments in the Audio Playback.
- Made changes to tracking logic to address several audio issues and make adding support for new scanners easier.
- Made change to flush frequency lists when changing data paths.

Download here: http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

3888. Uniden UBC57XLT pre-programmed memory mods?

Newsgroup: rec.radio.scanner
Date: 2003-12-20 00:04:28 UTC
From: grg7nz@hotmail.com
Message-ID: <4d66b73e.0312191604.81a530c@posting.google.com>
Source record: 23791

I have a Uniden UBC-57XLT that is pre-programmed with 64 police channels.

These channels are not useable in New Zealand.

Anyone know if these pre-programmed channels can be over-written in some way?
(Even down to direct chip pin modifications or programming)

Any help would be most appreciated.

Gordy

The information is available at http://www.trunkedradio.net/ in their log in database. A password codec is needed to get in but
it's free to get one and is sent back automatically once the request is completed, usually in a few minutes. Doesn't generate
spam. This opens the door to the extensive database covering North America and other goodies.

Additional information is available at:

http://www.woldanski.com/edacs/

Discussions on the subject are available at:

http://forums.scanbc.com/

The EComm system uses Pro-Voice digital, which is proprietary and there's no scanner that can pick it up yet.
The scanners that are digital that are digital are APCO-25.

Vancouver Fire is EDACS and can be picked up on trunked scanners, once the frequencies are set in the correct
order.

Vancouver Police, most Lower Mainland police (including RCMP and RCMP Port Mann, Deas Island Highway
Patrol are on the EComm's Pro-Voice Wide Area Radio System (WARS). Delta Police and fire is due in shortly, but others such as Burnaby Fire are not on EComm and Burnaby Fire can be picked up almost anywhere between Surrey and West Vancouver and south to the U.S. Border on 154.400 Mhz / 153.770 Mhz. New Westminster is dispatched through
452.2875Mhz. Surrey Fire is available, but you need to be in Surrey pretty much to receive it.

EHS in the Greater Vancouver area is also on the Pro-Voice EComm system. However, once you get north of Squamish and east of Abbotsford, it is mostly

analogue as I was able to pick up RCMP repeaters easily from the Whistler area.

Cheers!

Steve;
The Uniden BC 780 , BC 785 and BC 796 will do trunk tracking and
conventional at
the same time. The Radio Shack/GRE PRO 2067 and PRO 2053 will also.

The PRO 2052 (Uniden's BC 895 too) may be able to trunk track and do
conventional
together UNDER THIRD PARTY SOFTWARE CONTROL also your
computer must be dedicated to this application. And or have the RAM to
run the scanner control application in the background! While doing other
tasks!
Check out this site

<http://www.strongsignals.net/index.cgi>

I'm sorry you ended up losing your friend. The guy who you refer to
is not really a crossdresser though, so much as he was one of those
people who feel that the gender they had at birth does not match the
one their personality has always had. If you look at it from his POV,
the hormones and surgery fixed a mistake. His approach towards you
was most likely made as a "female". His big mistake was not accepting
that to you he'll always be male.
Crossdressing (something I did a paper on in college) isn't primarily
sexual in nature.

> You - Carmen, being a woman (I GUESS) - how would you like to be in
a
> restroom with a male crossed dressed - in there with you? If my wife
> was in a restroom and some perv went in there cross dressed, I'd be
> very pissed off. G.W.

Yes, I'm a woman. This might surprise you, but I wouldn't have a real problem with that. If he's dressed as a woman then he's going to cause quite a stir in the men's room, and might well end up in a dangerous situation if there are men in there who don't understand what crossdressers are. What they do is unusual, but only harms people who look at them and *choose* to be offended.
One more factor that would make the situation of a crossdresser using the ladies' room no big deal - we only have stalls with locking doors on them. Really think about urinals for a moment. A bunch of men who're most likely complete strangers unzip and display themselves while they answer nature's call. From my POV that's far more startling than some guy in a dress. :-)

Take care,
Carmen

"Anon" <Anon@NoEmail> wrote in news:bs0tij$51g$0@pita.alt.net:

Actually, many parents are indeed siblings. You did not specify that
they were siblings of the same parents, so your assertion is without
merit.

Some months have 30 days, some months have 31 days. How many months
have 28 days?

They all have 28 Days.

Divide 30 by half and add ten. What do you get?

70. Dividing by half is the same as multiplying by 2.

A farmer had 17 sheep. All but 9 died. How many live sheep were left?

9 lived. All but nine died, therefore 9 remain.

If you had only one match and entered a COLD and DARK room, where there
was an oil heater, an oil lamp and a candle, which would you light
first?

The match.

To know and to be, this is not even a question, there is no alternative.
You see it clearly in the loneliest little avenues between particles and
waves, shunned even by the gregarious quark and unknown by the various
strands of time, so big it cannot be seen, yet so little it is
immovable, lies the fabric of the ultimate reality gripped in the tiny
fist of the all or nothing."

Yeah, I'm sorry I lost their relationship too! They were nice, but when they hit on me, that was the end of it. I had a girl then, and they knew it. So to me, that was the unpardonable sin. What others do, doesn't bother me, be it cross dressers or whatever, so long as it does NOT bother me. I will STILL get angry if a CD goes into a restroom with my woman in there. They have no reason to be in there. NONE. They can share a urinal just like the rest of the "men" do. And as far as displaying one's self at a urinal? Most men (STRAIGHT) - won't look. I know I sure in hell don't! Back to other's actions. I was on a CB radio once -talking, a male came on after the others I was talking to had left. He said to me. "I'm gay, would you like to talk to me?" I replied "I'll talk to anyone, just don't try to persuade me with your ideas or try to hit on me and we'll be ok." I don't agree with CD and Gay - but hey... to each his own. I'm not offended unless they press themselves into my realm. As to you, I wasn't sure if you were a male or female. Your post led me to believe you may be a woman, but I couldn't be 100% sure. I've known of men with the same name and spelled the same. Cross dressing from a dress to a t-shirt and jeans - you feel like a cross dresser? Hell, that isn't cross dressing to me. Not from a woman to a man like image. As opposed to a man changing into a bra and panties and a dress complete with make up. Put a 3 piece suit on - like a man, get a butch hair cut and so on, then maybe I can agree with your point of female to male cross dressing. G.W.

I have a new in box Motorola M1225 LS 25-40Watt Mobile Unit,
MINT/UNPROGRAMMED. still with mic and clip, hardware, manual, and safe op
manuals. The split is 450-470 UHF. Never programmed. Photos upon request
Model # M44DGC95A2AA
asking $275.00

With whip rubber duckie, Kenwood rapid charger and 1 good battery.
I will sell for $90 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital
here. I am selling it since I already have a BC780XLT. The package
is complete from RS, box, manual, antenna, clip and regulated
external PS. I will sell the package for $475 shipped. POSTAL MO
only.

Also, 1 pair (2) Motorola 2 channel Radius P110 with 1 good battery (new one
costs $30) ,
antennas, 2 chargers.
Model #'s P44QLC20A2AA

Asking $220 for the set OBO

Photos of
all units available. Postal MO preferred. I do not use paypal. I will
consider COD if paid by buyer.

JFK was making a request that people volunteer their time to make this
nation and through the Peace Corps the world a better place. It was not
a demand and not against the Constitution. Trying to compare this
request to any demand Red China has made of their people under penalty
of their law is insulting to our nation and memory of a great leader.
You show no understanding of past events with comments like this. You
should be ashamed of writing something like this. Please re-think what
you wrote.

I can count the number of times on one hand that a world leader made a
speech inspiring people to make the world a better place out of self
sacrifice and you try to compare this to a repressive communist regimes
actions? Totally incongruous is this thinking.

TELAMON,

JFK's "Call" was NOT Limited to the Peace Corps; but to
Service of All Kinds to This Nation to Make It Greater.

+ To Get Involved in Government Civil Service.

+ To Join the Military

+ To Become a Teacher, Nurse, Doctor, ETC

+ To Become a Fireman, Policeman, Public Service Worker

+ To Volunteer in Your Communities - Helping Others

+ To Volunteer for the Peace Corps, VISTA, AmeriCorps

+ YES - Even To Get Involved into Politics

For Every American to Actively Work to Build A Better America [.]

NOTE: IMHO - A Better America - Will Make for A Better World.
- I Do Not Subscribe to the "False" Idea of the OWLES
- - That Only By Tearing Down America in Words and Deads
- - - That We Can Then Start to Begin To Build A Better World.

REMEMBER TOO: On that Inauguation Day JFK Also Spoke These Words.
"Let Us Go Forth To Lead The Land We Love,
asking His Blessing and His Help,
but knowing that here on earth
God's Work Must Truly Be Our Own."
- - - Inaugural Address of President John F. Kennedy
- - - Washington, D.C. January 20, 1961

Do you suppose JFK was shot for mouthing off?

If he had not said those things, would he still be alive?

Would he have been elected for a second term?

You also have a very strange point of view!
Government jobs have always been the root of welfare.

(When the public welfare was reformed then President Clinton ordered
thousands put on the federal payroll to "Employ them" Elevator operators
for the Pentagon, for automatic self serve elevators. etc.)

IE: Position paid by the taxpayers without responsibility for the outcome or
result.
Show me anyone in any government position who is held responsible for the
damage they do, or failures to perform! Never happens, or rather so
rarely it is a major news event, when was the last time you heard of a
government employee held responsible!

None of the positions listed are actually Volunteers! All are paid,
although some are called compensation. Pay, Salary = Compensation. No
difference.

There used to be volunteer fire men, and other "Public Service
positions, but not much anymore, the Unions are using these positions to

extract moneys to enhance the political position they uniquely espouse!
That THEY OWN these positions!

BA,

I guess what 'roger' does not understand was that JFK was calling for
the American People to be "Committed" to a Life's Work in any form of
Public Service. YES - These were JOBS and most of the Volunteer
Programs have their Benefits. But... JFK was asking more of
individuals; then simply doing a 'job'. Things like a bring a Passion
to their Work. A Desire to make this Nation a Better Place for All
the People. Giving Back To America.

As for 'roger' last three lines:
* Do you suppose JFK was shot for mouthing off?
* If he had not said those things, would he still be alive?
* Would he have been elected for a second term?

'roger' evidently subscribes to the "False" Idea of the OWLES.
That it is their Duty-In-Life to Tear Down America in Words and Deads.
To Attack America's Dead Heros and Public Leaders like JFK.

Greetings,

I have been looking for the Greg Knox Discrim Tap pictures and info for the BC 895 XLT.. All the sites I have been to point me to the old yahoo page that used to have them.. I am a long time sand bagger of this group and have gotten alot of great info from just reading... Also I have one other question. I would like to know if it is possiable to get a second hand or new EDACS Transciever and with the proper cables and software set the radio up as a scannsr for just RX only. Or if I wish for RX and TX.. And where can one go besides Motorola for $Overpriced$ software... Please email me at cte57439@centurytel.net or just repost here..

73's
Merry Christmas
Nick

FYI ...

Concerning the talkgroup issue on the BC296 and BC796D, the official response
from Uniden is below.

http://www.trunkedradio.net/groups/showthread.php?s=&threadid=6589

BC296D/BC796D Talk Group ID
Just sent from Uniden HQ:

On Friday, December 12, users around Hennepin County, MN started reporting
that their BC296D and BC796D scanners were having problems decoding talk group
ID's greater than 10000 (Hennepin County Sheriff's Department). These reports
were received by Uniden America Friday afternoon, and it was verified that the
errant behavior was not likely to be caused by interference (multiple units
exhibited the same problem at multiple locations, but decoded other talk groups
OK at the same locations).

This information was immediately forwarded to Uniden Engineering, who worked
through the weekend to validate, isolate, and prepare a possible solution. It
was determined that any Talk Group ID greater than 4096 on APCO 25 systems
will not track properly. It appears that this condition only exists today on the
Minnesota system, and that the issue can be corrected with an updated BCi96D
Digital Card. Field testing of modified units began Tuesday morning, and
initial field testing on the Minnesota system indicates that the problem has been
corrected. Additional test units and locations are being added on Thursday to
provide a greater margin of safety to ensure that are were no unexpected
side-effects from the fix.

Uniden expects to be able to issue instructions for the fix within 10
days.
Uniden customer support has no information in addition to the above.
No
additional test units or modified digital cards are available. Once
the logistics for
updating the cards has been determined, this information will be
published on
Uniden's product support web site
(http://www.uniden.com/productsuppor...?product=BC296D and
http://www.uniden.com/productsuppor...?product=BC796D).

I was curious at to the 'way' you all use your scanners. I have the 9000XLT (which I love) and the Pro70 along with three others. Even though shortwave and the BCB are my favorites, I'm going to start getting back to my scanners (that kind of got me in the entire monitoring hobby BTW.)

For 'MilitaryGeorge' or others in here. How would you set up your 9000XLT and the 70? Are the military freqs the same in Ohio as in your area. Is there a 'different' part of the spectrum you monitor and hooked too. {?} I need some ideas here and would appreciate a little bit of imput from all of you.

**I've often thought of monitoring the FBI or FEMA or any of the alphabet agencies, I have a feeling there'd be MUCH 'down time.' Am I right or wrong here.

Thanks a bunch :-)

Since you said "I guess" you acknowledge you ignorance.

None of the comments you appended,
from you own questionable bias has
anything to do with what I said and do
not answer the question ask.

The office of the president is a distractive function,
the speeches quoted were political in nature.
Not in keeping with the proper performance of his office.

Would he have been reelected?
I wonder.
He did reduce taxes, possibly for the wrong reasons,
we will never know.
He was not a deity, nor an exceptional man.
His fame came from being assonated!
Not a satisfactory way to make a mark in history.
IMO

The only attack was yours. Unwarented and unnecessary.
JFK was not and is not a Hero! He is DEAD!

I subscribe to the Readers Digest.
Never heard of OWLES.
I am a thirteenth generation American,
a veteran of the US ARMY 1st Division.

I do not tolerate insults from those speaking from ignorance.

> wabfh ~ RHF
> = = = We Are Better For Him (JFK).

I also do not subscribe to a religious following to a figure who contributed little to the strengths of the Construction and the limited powers the Federal government has been permitted. Only the founders deserve such reverence.

It was his speaches I addressed, not his service record.
He did indeed loose his ship to a Japanese
Warship and managed to save the crew.
I have heard the story, and seen the movie.

But being assinated did not make him a hero.

Clinton, avoided service and was largely disrespected for it.
Bush (current) served in a manner that was not sterling, but he did serve.
I can't say I approve of either's conduce relative to the military,
but President Bush is at least well liked!

Again, this has nothing to do with the question I ask!

No more nits....

My brother and I both bought a Pro-95 for ourselves for Christmas. Man, these things work great. EXCELLENT receive. We're very impressed. We've owned scanners for many years. These have done very well thus far. We're getting signals in some areas that we couldn't receive in before with other portable scanners using RD antennas. Well worth the cost in our books. Now to finish filling in the rest of the channels. We're only up to 200. I'm sure we'll find something.
G.W.

Kennedy was a fascinating figure --
--basically groomed from birth by a scheming father for the presidency,
--a womanizer,
--the visionary that sent us to the moon and started the Peace Corps,
--and the sort of legend that can only be made by dying young.

However, Kennedy also gave us LBJ,
--who gave us the welfare state that has arguably destroyed the family
structure of black Americans over the last 35 years,
--who ramped up the Vietnam War,
--and didn't try to win it -- betraying the trust of our servicemen,
--and giving credence to a knee-jerk anti-war movement that persists
(though times have changed) to this day.

JMO,

I did.

You can do so also by doing a google using the search terms

jfk pt-109 incompetent

Just stick with the mainline links, such as the one from NBC, or from the guy who was on the PT boat with him.

And to his credit, he got the USA going into space. I think he was a good guy, and he had a healthy libido. He was also smart enough to know that lowering taxes stimulates the economy. Democrats now have gone far, far away from JFK's Democrats. That is why they are going the way of the dodo.

And now, to be in line with the intent of this newsgroup (speaking of space), does anyone here use azimuth-only antennas for satellite use? I'm trying to, and ZERO success. I hear them, but so far, nada. Tips please? Followup here, or reply directly (but read the PureMail message at the bottom here!!).

From what I can tell these days, there are only a couple dozen guys actually using the sats. True?

All the best, and 73,
Dave

Correct. Being "assinated" would have made him a homo. Which he was
not, by any means. He had sex with more women than either Bill or
Hillary wanted to.

> Clinton, avoided service and was largely disrespected for it.
> Bush (current) served in a manner that was not sterling, but he did serve.

How about you? Did you "serve" more or less than either Bush Sr. or
Bush Jr.? OR did you "serve" as much as Clinton?

The FAQ says there should be a radio theme to the posting, so:

Question: here in NH, I've been keeping my scanner handy when the prez
contenders come to visit. Anyone else doing so?

check your receiver specs for current draw..... if you are blowing a 3 amp fuse check your polarity and also check to see if the plug blows without the radio hooked up(if fuse is in line with cord).

A "knee-jerk" anti-war movement? The Vietnam war lasted 15 years (25 years if you count the advisors sent in the 50's), about ten years longer than WWII. The war started while I was a young child playing with toys in my backyard and I was able to join the military as a young adult before the war ended. Any response in the latter years of that war (the period with the most wide-spread peace movement) could hardly be described as "knee-jerk."

A very small, micro-thin, wire ran around the entire ceiling of the apartment (right where the wall meets the ceiling), fed into a tuner/pre-amp. To keep visibility low, the wire is glued in place (a tiny touch of Elmer's school glue about every foot). Even though wire is running throughout the apartment, it is virtually invisible (only one person has noticed it, but only because he traced it out from the radio). The ceiling is textured, so when I leave, any glue that remains will simply look like the normal rough ceiling surface.

Stock rubber duck antenna. We've owned many scanners each over the years - base/mobile/portable, so we've seen some good performance here. I did ask of others opinions before buying... I had no bad ones. So, I told my brother the results of my question. We got them, programmed them and even in otherwise dead areas, they've picked up well. So, as I said, we are impressed. I'm sure you'll like or out right love yours. Our biggest problem is filling in the other 700 or so channels. I'm sure we will over time. If they pick up so well with a RD, I can imagine what a better antenna would do. G.W. HAPPY HOLIDAYS TO ALL.

BC70 probably draws less than 1 amp. My guess would be to look in the cigarette light plug itself. I have seen several of these get twisted around inside and the strands of copper wire get pulled out of the pressure contacts and cross over to the other polarity. Some of the type plugs, you can easily take apart, twist and perhaps even tin the leads with solder, the put them back in and they are good as new.

If you don't want to do that, pay a couple of bucks and get a new one.

WRONG! WE have tried 11 meters, not that we want to listen to it, but it worked well. Heard some truckers off the interstate about 5 miles away (the interstate from our location). As to 6 meters, now that I can't defend as to "off air" signals... to my knowledge, there isn't much 6 meter activity here. I've been in ham for a long time and I've heard only a hand full speak of any activity. Matter of fact, a friend of mine bought an H.F. rig with 6 meters in it, to try it. IT IS DEAD! So, yes, I'd say the scanner is working quite well as it comes out of the box with the rubber ducky alone. Upon reading your complaint, before finishing this reply, I just tried 6 and 10 meters along with channel 19 - CB on my Motorola Service Monitor. The receiver opened up below the listed values. The book says .3uV, I got on the order of .222 - .260 uV. And with what I've heard off air as stated above given my area, I'd say these units are working well. There are receivers out there with ,5uV or a bit more doing daily commercial work. The units are working well. Given how well these units are working with the rubber duck, I look forward to trying it on a out door antenna. My next trip to my repeater, I'm going to use an antenna off the tower for a few to check it out. Ought to be interesting. I've had scanners and other radios here that sucked when it came to receive or transmit in my area. People pull up in front of my home/shop and the receivers die. Power lines, numerous homes shielding the signals with aluminum siding, and so on. I've been in a particular building up the street that due to it's construction, it sucked up signals. These units pulled the signals right out of the air. So, I HAVE tested them in some known dead areas as well as on the Service Monitor. I'm quite pleased with the results and stand by my claim. Again, my biggest problem, filling up all 1000 channels. I'll find something.

What do you mean didn't try to win it? You stupid sonofabitch. Where'd you pick up that useless piece of information? Recite your little schpeel to the thousands of GI's wounded in Nam and the thousands more with psychological scars. They'd kick your little faggot white bread ass back to you higher institute of learning they never got to go to because they were forced to ship out 2 months after graduating high school.

> --and giving credence to a knee-jerk anti-war movement that persists

What in the fuck are you talking about? You weren't even alive during Nam little fella. If it wasn't for that anti war movement we would still be pumping lives and money into Vietnam and you'd be dead right now because as soon as you were 18 they would have shipped your ass over there and then shipped it back in a body bag 6 months later.

Yes ,it's a old one,but still scanning like a charm,
some minor problems with the key-pad,but nothing serious,
but I need a manual,to see,the the size, and voltage of the back-up
battery,I have changed it myself, for many years ago,and now ,it cant hold
the data.
Ayone...?

The men who were there know what happened!
With civilians directing the operations who were
more intent on body count that control of a territory.
Take if one day, stop, do a body count,
retake the same territory tomorrow.

My brother (a Marine) spent two terms in 'nam!
I bet him the policy was to maintain a status quo,
not victory, He argued that our military could kick
their butts. I agreed and pointed out that the Military
was not given the go ahead to act in a reasonable military manner,
it was all politics! After he returned, he bought me a steak dinner.
(I provided him a house while he finished at the University)

Your language and manners need mending sir!

You should take our own advice!

I am Not a "Little Fella" and I DO know what I am talking about!
The Anti war movement attacked the Veterans when they returned
and ridiculed them.

Demonstrators and draft dodgers were uniformly COWARDS!

No, demonstrators assured defeat, and the deaths of thousands of
Vietnamese who didn't get out!

Three men in my Brothers outfit died in the fighting.
Many more suffered from the drugs made so plentiful for them to
fight the depression of the conditions they were forced to be in.

One Marine squad on a flanking patrol destroyed an entire
Vietcong infantry company in twenty minute fire fight.
All the Marines involved were wounded, seven of the nine died of their
wounds.
I personally knew one of the survivors He is now a police officer.
That squad killed 135 of the enemy.

Politicians should never be allowed near a battle field unless in Chains!

Hi all,

I got the correct radio shack cable (20-289) to use with the PRO-95, and I downloaded the win95 software.

I couldn't find any instructions anywhere on the web, and when I try to "download from scanner" I get an error message saying it couldn't open the COM port. Under the 'configuration' menu I've tried up through COM port #10 but to no luck.

I've tried searching my computer's help for info on how to identify which COM port is tied to the serial port I'm using, but again there's no helpful info. I have figured out that COM3 is for the modem so port 3 is ruled out.

First I turned on the scanner, then plugged the cable into its PC/IF port, then I try the download.

I'm stuck, so thanks in advance for the help!

As one who was there, the administration put so many "Uhh Uhh's" on the rules of engagement that we had no chance of winning the war. Winning the battle, and fighting with the bravest guys you ever saw, made no difference when Macnamara and Johnson boasted that we "couldn't bomb a shithouse with out Whitehouse approval."

Battle is a fluid situation, you have to improvise. When you first have to check back with the White House before bombing anybody you loose. Why the hell didn't they bomb the hell out of Hanoi? This is where the Russians were bringing in all the supplies to support Uncle Ho.

Johnson was scared we may hit a Russian ship, or bring the Chinese into the mix. I was all for nuking the whole damn bunch.

So, the writer that stated we did not want to win is anything but a "stupid son of a bitch" , he has an excellent handle on the realities of the political side of the conflict.

You have a problem with your scanner. Mine has no problems receiving either band. In addition it works great on the 72 MHz band when programmed with the software available on the web. I use mine when traveling to monitor CB and at the flying field to monitor for activity on the R/C channels and interference. A six meter repeater over in Georgia (52 miles away comes in q-5)

I'll tell you what I mean, "You stupid sonofabitch."

I mean that thousands of good American soldiers were wasted as cannon fodder, betrayed by LBJ and his cronies. I was there, jackass.

We stopped bombing Hanoi, etc. while arguing for years on the shape of the table they would be using at the peace talks. Meanwhile my buddies were getting killed.

No, Dwight, I agree with your assessment of the Vietnam war.

The knee-jerk anti-war movement I'm speaking about is the one currently hampering our efforts to eradicate terrorism, that is funded to a large part by nostalgic nam-era activists.

The 2006, very nice radio.

I have the Uniden 785D, presently without the card required to receive
Digital Communications. I believe that the Uniden 780 is a good radio,
there has been much discussion about the 780 and 785D.

In the city, I have been plagued by intermod interference on most of my
radios, including the Uniden 785D.

If you intend to remain in the country (God, believe me, I wish I lived
in the country), the only things that you stand to improve with a new
radio is number of channels and perhaps sensitivity.

Though 400 Channels is quite impressive for the 2006, with a little
thought I would imagine that it would be easy to eventually fill in the
1000 channels available to the 780 and 785D. If you have less activity in
the country, you can compensate for it by monitoring more channels.
(Railroad, Aircraft, FRS, CB, HAM, obviously the State and County police,
etc.)

I am not really familiar with the 2006, though I have lusted for it over
the years. Do you use an outdoor scanner antenna?

Perhaps an AOR scanner might be an appreciated step up. Maybe others can
post their experience with AOR units.

Merry Christmas.

> 3amps keeps blowing out. What size fuse is needed? THANKS !

Too many unknown variables here for anyone to give an answer. Perhaps when you unplug your scanner, you let the cord hang loose and it shorts out against some metal part between the seats or elsewhere in the car shoring the fuse, in which case, always unplug from the lighter first.

Many times, when a fuse keeps blowing on me, I put the next higher value fuse in and never have another problem, but I would not recommend this for you, since none of use know exactly what you are doing and why it is blowing.

There are two trunked systems I monitor in Buffalo NY, Saia Communications 900 mhz system and the 800 mhz Niagara Frontier Transportation Authority EDAC system. there seems to be a lot of activity on other 800 mhz frequencies I think they belong to other 800 mhz trunked systems in and around the Buffalo NY area. Does any one know what these other trunked systems in the 800 mhz band are and what the setup information is (ie) frequencies, what kind of system and any information on any other trunked systems I can receive in Buffalo NY.

I'm in need of some expert advice, I've been out of the scanner game for some years and would like to get back into this hobby, however I've found that my old equipment is now obsolete in this new DIGITAL Age.

I would like to be able to monitor the Phila, Pa. area Police and Fire as well as the Bucks and Montgomery PD/FD what do I need to succeed in this endeavor??

I know Bearcat has a scanner that requires the use of plug in cards depending on which system the municipality is using and GRE (Radio Shack) has one that does not need cards, but that's about all I know on the subject.

I would like to get a portable as well as a base unit that hopefully would be able to receive all of the above municipalities, without extra cards or other additional equipment. Just need to know what if any would work, where to get them and how much it's going to cost to enter the Digital Age of Scanning.

Any help would be much appreciated,

Thanks,

Jim

Yeah thanks everyone on your input. Yeah Ive had this plug-cord for many years and have had it apart a couple times in years past to fix disconnected wires on both ends. I wrapped the fixed (solder) wiring with electrical tape and ive put on heat shrink tubing as well. Checked polarity and they aren't crossed and the wiring shows good on my vom meter.

As far as getting a new cord, years ago i bought one at the local wally world, now you go to any stores all any of em have anymore are phone cords. I suppose I could check the local bursma electronics store. But I at this point don't think its the cord.

Also I do have a permit for the car and radio.

I guess I assumed these power cord fuses were the same altogether.

I've been playing with my Pro-96 lately and I've noticed that the Rio Rancho PD frequency (155.805) has a lot of what seems like someone staying keyed up. I turn the squelch all the way up and I still get a signal, but it's not stopping anyone else from keying up and saying what they need to. Is there some type of device they might be using to keep people from scanning them? With the scanner on scan, it keeps stopping on that frequency.

At first I thought it might be the scanner, but I fired up the BC-895XLT and it was having the same problem. It's not all the time and seems to come and go, but I never experienced this before, just within the past month or so.

Just thought maybe someone here might know what the deal is. Thanks!

It works, but it's real overkill. In my case, it's done now so I use it with the shortwave. But I probably wouldn't do it again. Instead, I'd probably look into some type of folded wire antenna that is less intrusive. Luckily, antennas for scanners are much shorter than antennas for a shortwave receiver. Take care, Jackie.

That's a myth, Roger. Soldiers heading for Vietnam flew out on military aircraft departing from military bases and returned from Vietnam on military aircraft landing at military bases. The soldiers returning from Vietnam were very rarely close enough to civilian demonstrators to even be attacked or ridiculed. I joined the military in 1970 and traveled, in uniform, throughout the country to various training facilities that year. I was never attacked or ridiculed. Instead, the vast majority, in all age groups, were friendly to me and respectful of the job our military was doing. Americans had doubts about that war, but it was not directed towards the soldiers.

> (snip) Politicians should never be allowed
> near a battle field unless in Chains!

And that sentence shows your lack of understanding of the wider implications of that war. We had just ended a major conflict with the Chinese in Korea just a few years earlier - a conflict we didn't win. That same China now had nuclear weapons, an even larger military, and was not exactly thrilled that we attacking another of it's neighbors. A major escalation of the Vietnam war, which would have been necessary to win it, would have certainly caused China to openly join the conflict, with potentially devastating results for this country. Our government did the best it could do, within the constraints of the realities of the times.

As for the soldiers, many of the things they were complaining about (the operation tempo, shortages of food and supplies, and so on) were the result of faults within the military, not the civilian government. And, since the civilian government rarely selected the daily targets for patrols or missions (the civilian government set the wider strategic goals, leaving the daily activities to the military leaders there), many of the screw-ups in those daily activities were the result of military leaders also. In the end, the military just used the civilian government as a convenient scapegoat to hide their own screw-ups and failures whenever possible.

> attacked or ridiculed. Instead, the vast majority, in all age groups, were
> friendly to me and respectful of the job our military was doing. Americans
> had doubts about that war, but it was not directed towards the soldiers.

I don't doubt that the majority were polite and respectful. It is in the
nature of most patriotic Americans to respect the Military service, with
many being drafted and understanding the nature of the task!
And I am glad you had it easy, there was no excuse for the unruly behavior.

BUT 'This' MYTH I saw myself, watched repeated and got involved in breaking
up a few or the attacks!
They did not occur at return points for the military, but at schools when
the Vets would enroll and attend, and sometimes in other groups when some
one identified a member of the military in the immediate area. Sometimes it
was verbal, but I saw at least twenty fist fights. The worst one was when a
gang of about fifty demonstrators tried to prevent an ex Marine from going
to class because the demonstration was "shutting down" the school.. It was
only heated discussion, until some jackass decided that since the Jar-Head
wouldn't do what they told him they would restrain him. He was gentle, no
fatalities, fifteen taken for medical attention. NEVER JUMP a mud Marine!
The crowd scattered when he started breaking bones. Arms and Collar bones
break pretty easily and put unruly people down. Since I was older and
dressed in a suit I was identified as staff, funny, since I was only a
sophomore, but I came over to the school from work, I had to wear a suit in
my job! Because of this I helped cool off some other confrontations that
might have escalated into violence. Couldn't get the police or school

security to do anything, they got scarce at the sight of a crowd!

My brother told me that while he was flying home (civilian air lines) he encountered people who spit on him. He avoided them. He returned to Vietnam for another tour before he got out.

Never jump to conclusions without all the facts. There may be nothing there to land on.
The theory that China would have joined the war was never a factor, except in the eyes of the peaceniks since the Chinese WERE FINANCING the war!!! They also supplied most of the Munitions used! They had whole divisions in Korea! There were Chinese Military Advisors we captured and released in the Field. The Marines were ordered NOT to take Chinese prisoners.

BUT civilian politicos are not Generals, lacking the training and skills required in warfare, and often have wrong headed motivations. I am very well educated on the political scene of the time, and My job was to design weapons systems for use in the battle, or I would have been in the military then. I had been out ten years when the heavy fighting began. (reserves)

There was a change of our tactics due to the change in the warfare tactics used in Vietnam, no question! And in all wars there are screw-ups. Some of which cause casualties. BUT interference by non military government personal was a major factor in the length of the conflict and the level of losses we sustained.

All Soldiers complain, even when there is nothing real to complain about.
It's the nature of the Job and the pressure on the individual.

Another possibility is that it's a "birdie". Something at or near your location
(A PC perhaps) is emitting an RF field that's being picked up by your receiver.

Move the radio to another location, maybe another room or down the block, to
see if it stops.

15A is *way* too much to be drawing with a cigarette lighter adaptor. The socket can handle that much. The wire may be able to handle that much. BUT the adaptor itself will soon self destruct under such heavy use.

The usual thing that happens is the *spring* that pushed out the "tip" to make the electrical connection in the center of the jack can't handle all that current. Remember, ALL the current flows thru that spring on the way to the wire and your radio. It heats up the spring and failure soon follows.

How much current/time for this to happen? I dunno .. 15a, sure .. 10a, maybe ... 5a not likely.

Yeah, I do have the PC right here but it's in the same place it's always
been and it didn't cause any problems before. Oh well, I'm going to look
into putting an antenna up in the attic someday so maybe that will solve my
problem. :-)

> Move the radio to another location, maybe another room or down the block, to

I've tried, it doesn't. And it's just that one frequency.

Sorry, I don't buy that either. I've been a veteran for 30 years and my wife is a disabled veteran. We've attended school with many veterans, attend veterans events throughout each year, and both have been members of veterans organizations for at least the last 20 years. Throughout all that, we've never met a veteran yet who has said he or she personally was spit on or attacked. Instead, these claims most often come from those who were not directly involved with the military at the time, and almost always involve a third party ("I knew a guy who said..."). This is the stuff myths, not facts, are made of.

The possibility of China openingly joining the conflict was a major factor in decision making of the time. China was obviously supporting the North Vietnamese, but that is vastly different from what I said ("an esculation of the conflict would have caused China to *openly join* the conflict"). An open conflict with China would have led to several million Chinese soldiers flooding into Vietnam to fight our soldiers directly, and may have even led to nuclear warfare between China and the USA. Only a darn fool would have ignored that possibility (yet some military leaders did actually want to ignore the possibility - our civilian government was wise enough not to).

And Generals lack the knowledge and skills to judge the wider political implications of a conflict. They also don't have a mandate from the people of this country, a Constitutional mandate, to make decisions that could impact all Americans. The elected President is Commander in Chief of the military and I expect that Commander to command and the soldiers (including Generals) to obey. Anyone who has a problem with that should consider relocating to a country controlled by a military - this country and it's military is controlled by an elected civilian government.

Sorry, this can go no further, you CHOSE not to believe
anything you like, but I was there at the incidents described.
Perhaps it was a local phenomena, we were told otherwise.
The Media would cover Demonstrations, but never showed
the violence! I believe many demonstrations were staged! (Phony)

Your opinions are yours to hold dear.
My memories are painful reminders that it is not a perfect world.

I did not say My brother was on a civilian airline in a war zone.
That was your error!
It happened when he boarded a flight at SFO on his way to PHX!
BTW: He doesn't talk about it with strangers either, not knowing
what to expect as a reaction. You clearly have a difficulty
understanding what I have written, probably due to the wide gulf
between our experiences. I understand.

I do not have an obligation to explain or convince you.
Also I do not care to burst your bubble.
Or to break your rose colored glasses. So I will not continue,
didn't meant to get sucked into this line of discussion anyway.
The direction this has taken is not in the topic of the radio group,
and I am leaving the group since it has produced nothing of value
or interest to me.

I suppose we have never met, at least in person.
I was in the reserves, working in military related work, and witnessed the
events personally.
BTW: Myth = one definition, an old story where the origin is not known....
like the Bible! (No author credited)

> > (snip) I saw myself, watched repeated

There have been auto accidents in California with over a hundred cars
involved, you heard how many were hurt and the outcome of these accidents of
course!
I don't know where you would see it, the school handled it in their clinic
and I didn't see any press or TV about it locally. I do not know why
because I would have thought it was big news!
A broken wrist two broken collar bones, and lots of bruises and a couple of
black eyes didn't seem so big. There were more hurt in a fight after the end
of season football game!
However the Demonstration got almost a whole page! But why would you
believe the news papers, with known bias, and not an eye witness? Not to
good on jury duty to ignore direct testimony. But there is no trial. And I
decline to testify further.

You state the obvious as if you have a problem believing it.
Why if Generals lack this magically unique knowledge
are they sometimes elected to the office of President?
Like for example, Washington, Grant, Eisenhower, etc!
I respect your opinion, though I do not agree with much of it.
Why do you believe you have the right to suggest that

a citizen of this country should leave because they disagree with you?
(Rhetorical, I AM dropping this group.)

Not to get caught up in this, rather a comment. I can't say if/who/when/
where someone got spat upon, but I
could BELIEVE that one of those long-haired, granny-
glasses drippy-hippy could have been severely injured
if he tried such a caper. If any of those cowardly, "peace"
niks had jumped upon, or spat upon one of our Marines,
then I would supported him, encouraged him, urged him,
or HELPED him to put on an old fashioned ***whippin' that SOB would not
soon forget! And if any bones got
broken, particularly of those pot smoking, #$%^&%$#@, then all the better!

Then he'd have MY a** to whup if he pulled such a caper and spit on me,
'cause being rather a large fella
with something of a temper, I'd have stomped a mudhole
in his butt he'd not forget. The airlines wouldn't have had
to've "protected" me; I'd have attempted to take care of it myself. Now,
much older and mellower, but still in pretty good health, I'd think a bit
more about getting into an altercation. When I was 21-22? Uh-unh! I'd have
smacked hell out of him without a second thought.
Hehe! Matter of fact, I GOT into a few fights in those
days. LOL!

I don't remember hearing personally of spitting incidents,
only of vague reports of such. I only know what *I* would have done!~

Dug out my old Bearcat 210-XL; seems to be ok, but squelch is inoperative,
hence no scan and all noise.

Does anyone have a downloadable schematic of the audio section?
Any tips?

Yes, I choose not to believe accusations against a significant portion of this country's population, or accusations of incompetency against the government of this country, without clear and convincing evidence to back it up. Surely you don't believe your word alone is enough for such accusations, in a public forum, to go unchallenged.

> (snip) So I will not continue, didn't mean
> to get sucked into this line of discussion
> anyway. The direction this has taken is
> not in the topic of the radio group, and I
> am leaving the group since it has produced
> nothing of value or interest to me. (snip)

Well, that is certainly your decision to make. However, if what you've said is really true, I strongly urge you to follow up by reporting your experiences to the various veterans organizations in this country. Several have ongoing programs to gather and verify the history of veterans over the years.

> There have been auto accidents in
> California with over a hundred cars
> involved, you heard how many were
> hurt and the outcome of these
> accidents of course!

No, but there would be a written record of each of those automobile accidents - newspaper accounts, police records, hospital records, insurance claims, and so on. The same is true for the incident you described (fifty demonstrators jumping a marine, with fifteen requiruing medical attention for broken bones), which means your claim can be fairly easily verified if true.

> (snip) But why would you believe
> the news papers, with known bias,
> and not an eye witness? (snip)

I'm not going to "believe" anyone, including a supposed eyewitness, without facts to back up what is said. I can ask a newspaper for the source of it's information, or research the incident myself in the same manner as

the newspaper did. But, an eyewitness, without verification of what is said, is the absolute least reliable source of information.

> You state the obvious as if you have
> a problem believing it. Why if Generals
> lack this magically unique knowledge
> are they sometimes... (snip)

Again, a military officer does not have a mandate from the people to make decisions that could impact all Americans. In a democracy, we place that authority in the hands of the elected government, not in Generals. The elected President is Commander in Chief of the military and the soldiers (including Generals) obey his commands. Any effort to subvert that system, by claiming government should have no say in the actions of our military or whatever, is, in my opinion, a direct effort to subvert the very system of government in this country. I took an oath many years ago to defend the people, Constitution, and government, of this country. I still consider the ultimate goal of that oath worthwhile.

Hello all.
I have a BC9000 in excellent condition. The entire radio is pristine and looks like it just came out of the box. Included with the radio is the operating guide, the service information manual, original telescoping antenna (BNC-type connector), and the power cord. Asking $200 shipped in the U.S. Please email direct to galotoczky@hotmail.com
Thanks for the interest.

What problem might is leakage from a cable TV system. When I used to live in the city the cable company had a crappy cables with a lot of leakage, they use to trash out the 2 meter Ham and some Landmobile frequencies. Now that I have moved to the country the local power company spews out garbage with their RF on the power line (i.e. carrier current systems) for their equipment monitoring system.

Another possiblity is a microprocessor control device within the house that is spewing out garbage. The signal strength you are talking about seems to maybe indicate it is either in or very close to where the scanner is.

> particular store in the future.

Harry, I couldn't agree with you more. If I bought it from Store #123,
and I needed to get it reprogrammed, and I took it back to that same
store, I would expect them to take the minute or two required to do the
reprogram. That said, I would also take into account how busy they were
at the time -- such as, not taking it in while they're swamped with
Christmas shoppers. And if I were doing the programming, I would try to
have a list handy to accompany the radio to show what frequencies were
put into what channels AND what those frequencies were for (city fire,
police, sherrif, cable company, Taco Bell, or whatever).

But if the store were to take the snotty attitude that you described,
and if I made sure I wasn't hitting them up for the service when they
had customers waiting, I'd explain to them how they just lost a
customer, take my radio and never return. I'd also pick up the
manager's business card and drop a note about the situation to the store
manager with a CC to the regional manager.

I'm looking for recommendations for a couple of scanners, once my finances recover from the annual Christmas-shopping blitz. ;-) I'll probably hunt for them via eBay and monitor the newsgroups for for-sale listings -- right now I'm just doing "research."

One is to be a mobile, with a mounting bracket; the other will primarily be used as a base unit. Both should be capable of trunk-tracking, plus I prefer they be able to receive the military aircraft band (225-400 MHz AM). Coverage of the 10m amateur band's FM sub-band -- to monitor the FM repeaters in that band and the simplex channels -- is a plus, but the lack of it isn't a deal-breaker.

One major feature I really need in each is the ability to program them via a computer. That way I can take the same database of channels and "dump" them into the scanner so that whatever I do to the base can also be mirrored in the mobile, and vice versa. Alphanumeric displays for the scanners are a MAJOR plus.

Make/model recommendations greatly appreciated. Thanks in advance!

I made no accusations against any but the persons involved!
You were not there, and can only attempt to make it less clear.
What "significant portion of this country's population?"
The Peaceniks were at most somewhat less than 3% of the population, and
don't seem to share your dedication to protecting this country and it's
people.
I made no "accusations of incompetency against the government of this
country" Rather I pointed out My opinion of the generally poor decisions
made under a difficult set of circumstances.
These are hardly hidden and are for the most part common knowledge.

I was engaged in a discussion, not a court case, my word is good in court,
and many other forums, all of which I have a right to access and speak in.
You can not challenge my stated view of incidents by argument and innuendo!

> > (snip) So I will not continue, didn't mean

I made every attempt possible to me at the time. The school handled it as a
"student altercation" and their report did not state a cause! My sworn
statement is on record as were eight others.

The school has changed administrations since then, and the records are in
storage. It is possible, but not easy to obtain them. I've tried.

> > There have been auto accidents in California with over a hundred cars

> true.

You are not quoting me, and clearly did not read nor understand what I said.
I said only one (Jackass) jumped the marine. There were fifty demonstrators
present, most ran when the violence erupted. Many (8) jumped in to help,
including myself. fifteen were looked at for medical reasons, but they were
only three broken bones, which I stated clearly! At the time the bones were
broken, there was some serious reduction in the action! Most were burses,
skinned knees and elbows, and (I think) a couple of black eyes.
Where do you get off mis-quoting in order to try to cast doubt upon someone
else? Is it poor form, dishonest and makes you look foolish!

Snipping out partial quotes, and modifying them to allow you more to comment
on is not questionable it is dishonest!
As to verification.
You have clearly never tried to obtain the records of an accident you were
not involved in!
You must state a reason, and they block out all names and addresses to
protect the privacy of the persons named. It takes a court order to obtain
more detail.

> > (snip) But why would you believe

> is the absolute least reliable source of information.

You would be a poor juror!
The court is clear, testimony and physical evidence are the only material
you may base a finding upon.

Also, as I said, I was not trying to make you believe, rather relate to you
an experience I HAD and verify that I had reason to believe it was more
common than the several minor incidents I personally viewed! Nothing you
have said changes anything at all!

Repeating yourself doesn't make you more believable nor more patriotic!
You make statements which clearly indicate you either didn't understand what
I said, or have twisted the words to mean what you WANTED to hear. That
Ho-Ra not withstanding, it is not part of nor has any bearing upon the
discussion we were involved in.
I choose not to be drawn into a discussion of the responsibilities of
officers (Generals) to advise a president. It is not part of this
discussion!
After a visit to your poorly written web site, I see your travels possibly
corrupted your perspective and you have a twisted view of reality!

Hello

... Maybe just the obvious: the repeater staying keyed-on for a
lapse of time because a phone patch has been done. We have it on
the local Hydro freq.: Their repeater output stays on for
something like 3 or 4 minutes after the last exchange
if it is mobile-to-landline-phone. It is like if the phone
patch system doesn't recognise that the line has been dropped and
it then hangs the repeater on for its "time-out" period.

Hope this help!

- Sylvain.

4024. Help -BC780 XLT & Winscan780

Newsgroup: rec.radio.scanner
Date: 2003-12-27 16:28:18 UTC
From: Ronnie <ronnie63@optonline.net>
Message-ID: <recruv4k11isat834s5g3b92e3bv0arhv2@4ax.com>
Source record: 23627

Hi,
I hope someone can help me out. For over a year I've owned a
Bc780XLT which I control with Winscan 780 and never had a problem. I
just bought a second BC780XLT and when I went to program it with
Winscan the decimal point in the frequencies is offset by one place.
Any suggestions??? Its driving me crazy. Thanks.

Ronnie

Lets see who is really being dishonest here. Your exact words were...

"The worst one was when a gang
of about fifty demonstrators tried
to prevent an ex Marine from going
to class because the demonstration
was "shutting down" the school.. It
was only heated discussion, until
some jackass decided that since the
Jar-Head wouldn't do what they
told him they would restrain him. He
was gentle, no fatalities, fifteen taken
for medical attention. NEVER JUMP
a mud Marine! The crowd scattered
when he started breaking bones."

You clearly said "they," not one, tried to restrain the marine ("they
would restrain him"). You said nothing about most demonstrators running when
the violence erupted. Instead, you said the "crowd scattered when he started
breaking bones." You said nothing about the number of broken bones. And,
finally, you said fifteen demonstrators needed medical attention ("He was
gentle, no fatalities, fifteen taken for medical attention"). The story
you're telling now is a lot different from the story you told before.

> Snipping out partial quotes, and modifying
> them to allow you more to comment on is
> not questionable it is dishonest!

I have not modified a single one of the quotes of what you've said. Your messages, and my quotes from those messages, are there for all to see.

> (snip) You would be a poor juror! The court
> is clear, testimony and physical evidence are
> the only material you may base a finding upon.

Of course, this is a public forum, not a courtroom, Roger. However, lets look at this from that perspective for a moment. The strongest testimony is that backed up by physical evidence. You've offered no physical evidence. Regardless, since you've now changed your story under cross examination, nothing you've said would hold up even in a courtroom.

> (snip) After a visit to your poorly written web
> site, I see your travels possibly corrupted your
> perspective and you have a twisted view of
> reality!

Those travels were arranged, and paid for, by the Department of Defense.

> It does indeed verify the accuracy of Dwight's quote.
>

The story has not changed, I only added details to show his assumptions were
BOGUS.
Actually I DID detail the number of broken bones! The number taken to the
Schools clinic included four of us who tried to break it up! I only got a
skinned knee. I didn't feel that was a needed detail, or for that matter
than any significant detail was needed. I was unaware that Dwight was
intending to defend the actions about which he has no first hand knowledge!
You are also being very selective and not at all objective.
None of these comments has any impact upon the incident which occurred so
long ago!
So inclusion of "they" was a misleading indicator which cause him to jump to
several unfounded assumptions. Again, his perception, not my commentary.
There is no point in the "Cross Examination" unless he maintains the
Demonstrators were not at fault. Please Name those you are defending! I
was there and couldn't get the names!
Perhaps more detail would have been needed, but there seemed no point, it is
OT!
However let me point out that he makes the comment

> (snip) After a visit to your poorly written web
> site, I see your travels possibly corrupted your
> perspective and you have a twisted view of
> reality!

Those travels were arranged, and paid for, by the Department of Defense.

On his web page he states,
I was born in North Carolina in 1953. However, other than two years on the
coast of the Mediterranean Sea near Istanbul Turkey, I spent much of my
childhood in Sacramento California. I enlisted in the Army in 1970 and
served a little over two years in Germany (MOS 31M - Radio Relay Operator).
I returned to Europe in 1977 and found work as a sales representative with a
consumer electronics marketing firm based in Basel, Switzerland. I later
managed a German-owned computer store in Heidelberg.

During those ten years in Germany, I took a course in journalism and public
affairs, and an electrician course with several additional sub-courses in
communications fundamentals, logical troubleshooting, and electrical

physics.

In 1998, I went to Europe once again to live in Vicenza Italy for a year. When I returned to the United States, I lived in Washington State for several months and then moved to my present home in Myrtle Beach, South Carolina.

Were all these Junkets paid for by Tax dollars? Shame!!!!

So much for your insistent irrelevant nitpicking!

Good Bye!

And why would you care?

I only related that I HAD seen a demonstration where violence erupted, and
DS wanted to pick it apart. Nether polite conversation, nor good manners
were evident!
Are there no participants in news groups with a modicum of manners?
Are you defending violent demonstrations as a "first amendment right?"
Rhetorical, your answers are of no consequence, and will have no effect!
All will be as it is now, and the sands will cover it all in time!

Thanks. I'm debating the digital factor. I live in Orange County, CA, which has the police on digital (except for the Red channel for pursuits) but the fire department isn't. I mostly don't need to worry about PD monitoring, but I'm thinking it might come in handy in the course of working with Fountain Valley PD RACES. I'll take your good recommendations into account when I make my decision, and thanks for the info!

Side question: what are the options available for these two scanners with regard to software for programming via computer?

In article <gbGdnQs9p6W50HCiRVn-uQ@comcast.com>, wcrocker007@comcast.net says...

If you wanted details, all you had to do was ask (as I did for you, Roger). As for Turkey, my father was stationed there with the Air Force. The trip to Germany was paid for by the Army while my wife was still on active duty. She got out three years later and went to work for the Army as a civilian employee (HQ USAREUR in Heidelberg). For much of that time I worked at civilian jobs, and later for the Army itself. I was still working for the Army, as a civilian employee, when we went to Italy (HQ SETAF in Vicenza) for the Kosovo conflict. My wife retired as DoD employee shortly before the trip to Italy and I retired shortly afterward (just after the trip to Washington state).

Gee it hurts when the shoe is on the other foot.
That is what you were doing with what I said,
jumping to conclusions about what I said.
You did not ask, you assumed!
It is different when your ox is gored.

You should not be so quick to criticize others when
they do what your have been indulging in all along!

BTW: 'I' do believe you! My Step father was airforce,
we traveled all over. But rarely in Europe!
Although he used to go for several months at a time.
Usually as an interceptor pilot it was all over America.

But you didn't ask for more details, you criticized taking
immense leaps of faith at what you THOUGHT I had said!

To BAD!
Good Bye!

I didn't jump to any conclusions. Instead, I simply questioned the exact words you posted to this newsgroup.

> You did not ask, you assumed!

See the last paragraph below.

> It is different when your ox is gored.

Man, you're not at all in touch with reality. No ox of mine was gored. I openly volunteered the information, as I have done many times in these newsgroups over the years.

> You should not be so quick to criticize
> others when they do what your have
> been indulging in all along!

Initially, any criticism was in your own head. I simply questioned the story given. You grew defensive when it became obvious that I wasn't going to accept your story as offered. At that point, you began to change and embelish the story to make it more believable. But, in my view, those very changes and embellishments only made the story less believable (the truth rarely changes).

> But you didn't ask for more details, you
> criticized taking immense leaps of faith at
> what you THOUGHT I had said!

I specificially asked you when and where the incident took place. If you continue to deny that (as you've now done twice in this message), I'll post an exact quote of those words too. Otherwise, I've had my say, with nothing more needed to be said, so will therefore let this entire discussion drop at this point. Take care, Roger.

Steve insofar as programming is concerned, take a look at:

http://www.strongsignals.net/access/content/software.html

I think the general consensus is that ARC780 and Trunkstar 780 are
about the best for the 780, and ARC250 is best for the 296.

Chances are that even if you do get the right freq, the voice link is going to be encrypted and all your going to hear is tones and white noise swishing sounds.
Good luck and happy freq hunting.

Check for a defective antenna or antenna jack.
The center pin in the antenna could be broken off.

Another common problem is that the center contact of
the antenna jack has become disconnected internally from
the printed circuit board.

A broken antenna lead to the pc board is a good first choice. A blown RF amp is a second, but I believe some scanners have separate rf amps - so this may not apply. Also the IF may be defective or some other stage - to not allow the signal to develop to be fed to the squelch/audio. A bad crystal in the unit that sets up the receiver could be bad. G.W.

How well does the "alert" system work on it? I used the BCT 7 in the
90's, and it saved me several times from getting ticketed, but now that
my town uses trunking systems, I don't use it much.

Try Stridsberg Engineering. They have 4 and 8 port multi-couplers with built
in amps to negate the splitting loss. They are quite expensive, however they
are top quality and work extremely well.

I'm considering putting up a good antenna, to go with my new BC796D scanner. It seems many of the scanner antennas on the market are made very poorly, and don't hold up over time, and weather. Has anyone spent the big bucks for a Create Log-Periodic 5130-2N? It's a wideband, high~gain, directional antenna that offers 11~13 dBi gain from 105~1300 MHz. But at $300.00, I'm hesitating.

Link: http://www.grove-ent.com/ANT17.html

Hi,

I just downloaded a peice of software called Softscanner, from
http://www.softscanner.net

It claims to be a Scanner only you dont need the hardware. It also has
ACARS/NAVEX decoder built in, and works well even on a 56K connection.

I have listened to many pilots and towers and police, fire and 911
channels live. My question is: is this real or phony, as I have no
radio hardware attached to my PC.

I am waiting for a breaking news story to come on tv, so I can tune
Softscanner to relevant police or fire channel and see whats going on.
That way I will be able to tell if it really is live transmissions I
am getting on my PC.

I am sorry if I sound a bit dense, but I am new to this kind of thing.

Regards,

Danny

Could just mean he has unlisted information, which is more common these days. I too was ripped off recently and tried to track down and prosecute the mail frauder but no one seems interested enough. It seems postal inspecters could care less these days if it's not of grand theft proportions. Called the police and they told me it was a civil matter and would have to settle in court and told me to get a lawyer which of course cost more than what I paid for merch. Postal inspecters said they can only send notice unless it is a repeated offense by same individual. I just gave up and chalked it up as a lesson well learned. Now I always make contact by phone and check refernces and other list before I buy from anyone online. The fraud is so rampant that the authorities will just tell you to be careful next time. I'm sure some people have had better luck than me but that's what I learned from my expereince. Good luck.

Jason Wagner <bsojlm$9e9$1@reader2.panix.com>...

^ Going to have one to two antennas up on a mast feeding
^ several (or more) scanners down below. Looking for an
^ effective way to split + amplify the signals so each
^ scanner thinks its got its own antenna.

Before you buy anything additional try all the receivers on the one or two split signals. T-adapters and short lengths of coax from the antennas to the receivers would be all you need. With the antennas up high and unless you're trying to receive weak signals, the split signal might still be strong enough for what you want to receive.

If the signals are not strong enough in that configuration then keep this in mind when you're looking for something to buy: these are receive-only radios that do not need to be inductively matched to a transmitter and they do not need expensive antennas designed for high power output. A duplexer is not required.

Frank

^ I'm considering putting up a good antenna, to go with my
^ new BC796D scanner. It seems many of the scanner antennas
^ on the market are made very poorly, and don't hold up over
^ time, and weather. Has anyone spent the big bucks ...

You don't need to spend big bucks on a receive-only antenna. Try putting several lengths of wire on the end of the coax, one length for each band you intend to receive, and run that up your mast or lay it on your roof. I receive all VHF bands very nicely with a horizontal antenna (a Windom, actually) strung across my living room.

Frank

Thanks Frank. I actually have a cheapie $5 splitter from Radio Shack. I've got a Pro-2026 and a Pro-2004, both tied to a Radio Shack antenna. Off the splitter, the 2026 receives fine but the 2004 doesn't get anything at all. With the antenna straight into the 2006 it picks up juts fine.

---> My reply to what Bill wrote 12/29/2003 1:48:14 PM

You are right, a good antenna can really improve things but just as important, some times more important, is a good quality coax. I would suggest at least 9913 or better.

As for the antenna, it is hard to pick just the right one for everything you want to hear. You either have to compromise on gain to pick up wide band performance or you have to pick a gain antenna on the band you are most interested in and let the other signals be received as well as they can be.

A lot of antennas are made with low quality materials and poor construction techniques. For all around (wide band) I like the Icom discone antenna it has the loaded whip for low band and does a fair job up to about 1200 MHz. Being a discone it has no gain but is wide band. Construction is good and I have had one up on the roof a number of years.

An antenna you should consider, if you live outside town or have signals mostly in one direction you want to hear is the scanner beam. You can mount it fixed in a direction or put a rotor under it. I have found, it works quite well. I am not impressed with the materials used in it but so far it has survived the weather for 8 months without falling apart.

You can buy, or build a single band, gain antenna that should do a good job on a single band and will receive local stuff on the other bands. If you have a couple of these for different bands mounted you can switch back and forth as your scanning needs change, These will truly give you the best gain. Look to buy or build with something with at least 6 to 9 db of gain, mount it as high as you can, away from power lines and metal. They will do a good job.

As I mentioned before, the coax is very important, if you lose all the signal you gain by putting the antenna outside you end up with nothing better than you have except the time and cost. Use the best coax you can afford, 9913 or better and keep it as short and direct as you can. Do not use adapters or spitters unless you have to (the add a lot of loss) and make sure the coax is weather tight.

Since we are posting information on ripoff artist I will gladly post
mine. The guy who ripped me off in Sept is Glenn Thompson PO Box 288
Stillwater OK but that mail box is no longer active address. I paid
$150 for bearcat 245 trunker and did not receive this radio. I think
there is a list someone keeps somewhere??? I will post there too if
anyone has it thanks

Kenny

I have a new in box Motorola M1225 LS 25-40Watt Mobile Unit,
MINT/UNPROGRAMMED. still with mic and clip, hardware, manual, and safe op
manuals. The split is 450-470 UHF. Never programmed. Photos upon request
Model # M44DGC95A2AA
asking $225.00

With whip rubber duckie, Kenwood rapid charger and 1 good battery.
I will sell for $90 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital
here. I am selling it since I already have a BC780XLT. The package
is complete from RS, box, manual, antenna, clip and regulated
external PS. I will sell the package for $400 shipped. POSTAL MO
only.

Also, 1 pair (2) Motorola 2 channel Radius P110 with 1 good battery (new one
costs $30) ,
antennas, 2 chargers.
Model #'s P44QLC20A2AA

Asking $175.00 for the set OBO

E-mail me for photos mlk@cfl.rr.com

If a simple Tee is used (I assume we are not talking about a 2 way splitter as used in MATV/CATV)- local oscillator and perhaps synthesizer noise from one scanner will be impressed directly on the other scanner. Depending on the freqs monitored- this can be devastating. In addition, loss to each scanner may be dramatic at those freqs where the jumpers are odd multiples of electrical 1/4 wavelength.

Switchboard.com shows 8 Glenn Thompson's in Okla. (none seemed to be near Stillwater). Stillwater is a big college town, Okla State University and Eskimo Joe's so lots of folks moving in and out . Sorry about your $. RM~

4076. Trouble shifting into 4-Hi

Newsgroup: rec.radio.scanner
Date: 2003-12-30 05:25:34 UTC
From: NetWeasel <hd_883_97@yahoo.com>
Message-ID: <i%7Ib.38756$ms2.27581@fe2.columbus.rr.com>
Source record: 23579

Hello,
I bought my truck back in April. It's a 1994 K1500, with the 4.3L and automatic transmission. It has about 150,000 miles on it, but looks and runs great. I tested shifting into 4-Hi and 4-Low back at that time. Since then, I haven't had a need to use it, so I don't know when my problem started.

I've only just discoverd it now because my truck has been on vacation. It got hit a few months back while parked in front of my house. While it was in the shop, I was concerned about matching the 10 year old paint, so I decided to have the whole thing repainted, and 4.10 gears put in while they were at it. After a lengthy spell in the shop, I finally got my truck back today.

I decided to test the four wheel drive, and make sure it all worked before we get any serious snow here. It's a good thing I did. 4-Low works just fine, as does 2-Hi. But... 4-Hi does not want to cooperate.

Since 4-Low is engaging just fine, and lighting up the light by the floor shifter, is it safe to assume that the problem is in the transfer case, and not in the front end? I can get 4-Hi to engage sometimes, If I leave the truck in neutral, and give the handle a good yank from 4-Low all the way into 4-Hi. This has only worked a few times.

If I shift from 2-Hi to 4-Hi while the truck is moving, I feel the handle "click" into place, but the indicator light doesn't light up. Once in 4-hi, If I pull the handle back harder, or try and push it a little bit sideways, I can feel/hear gears starting to grind a bit, as if it isn't locking all the way back into place.

The truck had a 3" body lift on it when I bought it, so tomorrow I am going to take the plastic cover off and make sure that the handle isn't hitting on anything and keeping it from being able to completely lock all the way back. I doubt this is it though, because the body lift looks to have been on this truck for quite some time.

Does anyone have any suggestions of other things I can do to try and narrow down the possibilites and pinpoint what is wrong?

-NW

Specifically, what you're talking about is air-to-ground communications for the mud-crawlers calling in air strikes. Those communications could be with USAF A-10 aircraft, or with US Army helicopters. Same goes for the Marines, too.

I wasn't aware that 138-144 was allocated to military air, although I remember all too well that the VHF command units on military aircraft (mostly transports and other non-tactical -- i.e., fighter -- aircraft) were capable of operating from 108 thru 143.995 or thereabouts. I thought that it was part of the overall Aeronautical Service, with the exception of a few FM frequencies just under the Amateur 2m band which are used by Civil Air Patrol and MARS.

(When I was in the USAF I worked on avionics communications systems, including the VHF and UHF voice-comm radios. The VHF unit of choice way back then was the old Wilcox 807A, a VERY interesting rig. They don't make them like that anymore.... But I digress....)

Judging from the replies, there doesn't seem to be any one book that suits your needs, except possibly the Skip Arey book. So let me supplement the list with some additional recommendations:

1) If you're interested in shortwave listening, you will want to at least have a copy of "Passport to World Band Radio." You can get it just about anywhere, or visit www.passband.com to order it direct from the publisher. It's got detailed information about broadcasters, schedules and contact information, plus an excellent overall introduction to the SWL hobby and reviews of a wide range of various types of SW receivers. It comes out each year, so I pick up a new one every time it comes out.

2) Get a subscription to Monitoring Times ("MT") magazine, also Popular Communications ("PopComm"). Both are monthly publications. MT is heavier on shortwave but covers a lot of different radio monitoring subjects. PopComm is a bit more slanted towards scanning and personal communications other than ham radio -- probably because PopComm is published by the same folks that put out "CQ Amateur Radio," an all-ham magazine. ;-)

3) If you decide to go further into ham radio, then CQ Magazine is a good one to get. It covers more operating than it does the technical aspects. Another -- and arguably the best -- ham magazine is QST, which is available only either over the counter or as part of a membership in the American Radio Relay League (ARRL). If you get into ham radio, get an ARRL membership. Visit www.arrl.org for further information.

And whatever your choice in radio interests, please visit the ASWLC and SCADS groups on Yahoo! Groups. See my sig for the URLs. We'll be glad to have you aboard, and the online membership is free!

dxluver@aol.com says...
> Are the military freqs the same in Ohio as in your area.

Addressing just this one question: The bands allocated to the US military are the same nation-wide. Therefore, for example, 225MHz thru 400MHz will always be used by military aviation. However, the specific frequencies vary from location to location. If you want to know what frequencies are being used for a given airfield, be it military or civilian, you can visit www.airnav.com and look up the specifics for that airport.

For military frequencies other than those used at specific airfields, or for non-aviation services, you will want to consult the Poilce Call or other similar references. And of course, putting out a general request here with information about your monitoring location will usually generate some good replies. Since a lot of military communications are in the VHF and UHF ranges, they're line-of-sight and therefore of limited range. "Ohio" is a large area, so if you specify where you are it might be helpful.

And if you're REALLY hard-core -- and willing to take some risks -- you might hang out in the vicinity of your local National Guard armory during a weekend when they're having their monthly drills, "armed" with a scanner and frequency counter. You can probably pick up some good "intel" on what frequencies they're using that way. Same goes for Air National Guard, Army/Navy/Marine/Air Force Reserve facilities, and active-duty military installations.

Note that when I mentioned the risk factor above, though, consider that we are at terrorist-threat condition "Orange" right now, so someone sniffing around with electronic equipment will probably not be looked upon as harmless by the MPs patrolling the base. (Same goes for listening around airports, but their frequencies are public information.) If it ever goes to RED, best to just stay home....

> Chances are that even if you do get the right freq, the voice link is going
> to be encrypted and all your going to hear is tones and white noise swishing
> sounds.

Depends on what you're listening to. Of course, with aviation monitoring, ALWAYS monitor the GUARD frequencies -- 121.5 for civilian, 243.0 for military. Those are the standard emergency frequencies. If you're monitoring an intercept, chances are the military aircraft will attempt to make contact with the aircraft being intercepted via one or both of the GUARD channels, since all pilots should wherever possible be monitoring GUARD whenever they are flying.

As for tactical communications between the aircraft, that may or may not be encrypted. Procedures have possibly changed between my time in the Air Force and now, but in the 70s the only time communications were encrypted were during actual combat operations. Air defense intercepts were usually not encrypted then. (And we did our share, as I was stationed up in Alaska back during the bad old days of the Cold War, when Ivan would send his Bear bombers out to see just how far they could penetrate the ADIZ before being politely told at missile-point to take his toys and go home....)

>
> No more than the lighter socket itself is fused at! Toyota dealer tells me
> Camrys have 15A fuse for lighter.

That's great if all you're protecting is a cigarette lighter. Comm
equipment operates at MUCH lower current levels. Best to look at the
item being powered, see what the max current draw is, then get the fuse
closest to that rating.

(And in the case of equipment that transmits, be sure to use the current
value for transmit, not just receive. I remember one guy who couldn't
figure out why his fuse was blowing every time he keyed his CB -- turns
out he had only looked at the current draw for receive, so every time he
keyed down the current drain went way up and poof!)

Steve Silverwood <MPG.1a5a7af674c3b1bf9896b8@news-server.socal.rr.com>...

^ ... ALWAYS monitor the GUARD frequencies ...

Emergency frequencies are guarded, or watched, therefore they are often spoken of as guard frequencies. "Guard" is a verb in this case, not a noun. When units are transiting in company with each other only one unit need maintain the guard, and that unit is referred to as having "the guard". So when "guard" is used as a noun it refers to the unit maintaining the guard -- the unit watching the emergency frequencies. Through misunderstanding this term has become somewhat corrupted and I often hear sheriff aviation units calling 121.5 the guard channel.

Although a little off topic for the group, this is about the only group around remotely related...

Anybody doing Inmarsat monitoring? A few years ago Inmarsat A was the dominant mode, but it's analog. Seems Inmarsat M, a digital mode, is now what's in vogue.

Is it worth setting up an Inmarsat receiving station? I was a shortwave junkie in my earlier days and it seems Inmarsat has replaced HF for lots of utility comms...

thanks all...

Bob/WF3H

Look, I'm reporting what I hear... I know the distance from the interstate
to here. What the truckers are using I have no idea. I'm not in the damned
truck with them. NOR do I KNOW them. They're going to and fro on the
interstate, how the hell would I know who they are or what they use? That is
such an asinine statement, It is known that SOME truckers at least run
linears or modified 10 meter radios. Whether all do, I DO NOT KNOW.

The man stated he couldn't hear a CB at 5 watts more than 100 feet away with
his Pro 95. I CAN.. so what is the big freaking deal? Maybe we got lucky and
got two good units. My service monitor shows them to be receiving better
than the book lists them at in sensitivity. Since I can't prove it to you
any other way, I'm not going to argue this point any further. IT IS
RIDICULOUS to even try. I don't give a flying SCREW if you believe me or

not. I KNOW what I KNOW. Who are you to call me a liar when you 're not here to prove otherwise? And to say I'm exaggerating is exactly what you're doing - calling me a liar. I'm not even going to waste any more time on this stupid thread. G.W.

I forgot to make one point... I didn't buy the scanner to listen to "truckers" OR anything else on CB. I was merely relating "MY" experience with the reception. I wouldn't give a shit if the thing went dead on CB so long as everything else I want to hear - comes in. I'm into Public Service. CB chatter is not on my list of interests. I have CBs here sitting here collecting dust for several years. That is how interested I am in CB. To me it is trash, but that is my personal opinion. I'm not saying others shouldn't be there. Whether the unit was able to even be programmed for CB - let alone receive it well - did NOT influence my purchase of the Pro 95 one way or another. IF YOU bought the Pro 95 just for that, you may have wasted good money. IF you're not happy with the unit, TAKE IT BACK! How hard is that to figure out? No one is twisting your arm to keep it if bought or to buy it if you were contemplating it. I'm happy with my purchase and that is all that matters to me. END OF DISCUSSION from my end. G.W.

I agree with you. I bought my AOR8200 and I am disappointed in it.

No they don't. But wouldn't it be great if someone like Icom made the
R8500 able to handle trunk? Or imagine if the AOR 8200 could trunk?
Then they would be GREAT radios.

In article <VFYHb.214836$vO5.8765985@twister1.libero.it>,

I have been following this thread since it first started even on the
strongsignals.net forum when they killed it. JD stated then that the
Frank email was faked and asked for Frank to contact him and said
Terry had faked it. he even said he had emailed this Frank and got no
response. Don't you think someone who claimed to got ripped off by
this guy would answer him? It's so obvious now that the email was
faked. I don't believe Terry and I hope he can explain why him and
Frank and Mike have the same IP address and what he is trying to do.
Maybe the con artist is not JD Havry here?

Message-ID: <3bccecc6.0312301315.3175fd12@posting.google.com>
Source record: 23501

Anyone know of a simple, good quality, single channel VHF/UHF
workhorse receiver (in either a kit, board, or box)?

- Single channel operation at either:
VHF-lo (29.7-50.0 MHz 5kHz steps), sensitivity ~0.3uV
VHF-hi (148-174 MHz 5kHz steps), sensitivity ~0.5uV
UHF (450-470 MHz 12.5KHz steps), sensitivity ~0.5uV
UHF "T" (470-512 MHz 12.5kHz steps), sensitivity ~0.5uV
UHF HI (806-823.9875 MHz 12.5KHz steps), sensitivity ~0.5uV
- Spurios Rejection @ ~150MHz 40dB down
- Squelch control
- Line level audio out (no power amp required)
- Cost less than $35

Perhaps an IC Manufacturer Eval Board or even crystal controlled radio
(if such an animal still exists).....

4099. ScannerBuff Network On-Line

Newsgroup: rec.radio.scanner
Date: 2003-12-30 21:47:58 UTC
From: Scannerbuff <bobricci@pacbell.net>
Message-ID: <iomIb.3498$2V1.2739@newssvr27.news.prodigy.com>
Source record: 23502

FOR IMMEDIATE RELEASE
December 30, 2003

ScannerBuff Alert Network On-Line

http://scannerbuff.net

When the action is happening right now, let the ScannerBuff Network notify you.
Each day brings televised and radio broadcast pursuits, armed robberies, major
fires, natural disasters, and more. Best of all, it's completely free!

SBN is for scanning enthusiasts around the country. SBN features Incident Notifications via e-mail, text messaging, and pagers with e-mail gateways that allow you to
stay on top of breaking action in your local or regional area. SBN is non-profit.

SBN is completely free to all members. The primary differences between SBN and pay
sites are that 1) We are national; 2) An incident doesn't need to be televised,
3) Posts in the TalkGroups appear as soon as you post them, and 4) We notify you
about specific incidents of interest to you - not just televised pursuits!

A major feature of SBN is Incident Notification Groups where you specify the type
and severity of incidents that you would like to be notified of. For example, if
a pursuit is televised in your area and you select only televised events you will
be alerted. If you are interested in three alarm fires, but nothing less, SBN will
alert you that an incident is occurring. The alert will contain relevant information, such as dispatch radio frequency(s), TV channel(s), and an overview
of details provided. SBN also provides a User TalkGroup for discussion of in-progress events. Users themselves issue alerts for the benefit of others.

Benefits of SBN
. Free
. Nationwide Incident Notifications
. Nationwide User TalkGroups (Forums)
. Fast & Powerful Searchable Databases

. User Created Searchable Databases
. Your Own Private Database On-Line
. Download Receiver Specific Data Files

SBN is perfect for radio and TV stations nationwide, independent ENG reporters,
scanning enthusiasts, and TV viewers alike.

Stay tuned as SBN quickly grows into a community that helps one another coast-to-coast!

Terry - Below is the traced path for your manufactured emails. But, don't take my word for it, go to Google and view source the code for yourself. We can play email games, Terry. At this point I can't believe a word you say, and I am taking for granted that you rec'd said scanner and are trying to get half of your money back. It's not going to work, and I am not going to correspond with you anymore about it. As for giving out my address to people on the internet, you'd better tell anyone that comes to my door to bring a cop with them. I don't fucking play this bullshit. YOU have lied and falsified information about me on the internet, you've fabricated emails and replies, and you've called me a scammer and a rip off artist - none of it true and you know it. No more email games, this is the last of it. I have nothing else to say in the matter. Your actions speak for you, and you can have the last word. I refuse to read any more of this bullshit.

JD

> Did anybody get a recording (audio or video) of this interview? Perhaps
> something that could be uploaded?

It wasn't an "interview" -- it was supposed to be an expedition by four
people, each of whom specializes in a particular field which
may help dig up info on the operations at Area 51.

Bob Grove was of course supposed to be the "electronics expert." He
came off rather poorly. I mean no disrespect to him, but at least the way
the program was edited, it made him kind of seem to be stupid, or senile.
A lot of his comments were just "uh huhs" or "Yeah, probably" types of
supporting responses to other people's statements. At no point did he
state any 'facts' or decent suppositions regarding his SIGINT efforts. The
guy he was paired up with was apparently a private detective, and a couple
times while in their van or on foot around the Area 51 border, the PI made
the silly/paranoid comment of how the Area 51 guards were not only watching
them, but hearing every word they were saying. Bob Grove never asked him
why he thought that, or how it'd be done.

Was is possible? Sure! Parabolic mics, tuning in their wireless
microphones, 'bugging' their van & the land they were on, sure? But was it
likely? No...

Numerous times there was scanner traffic audible in the background, but
it was never definitively ID'ed as coming from Area 51, as opposed to the
numerous other gov't facilities in that region & Military Operating Areas.

Yeah here we go again - READ the NNTP IP addresses. All three email messages have same IP numbers, Terry. I did not fabricate this - view the source code yourself on your own messages. I will lay it out for you. The numbers are the SAME - i.e., they originated from the same ISP, meaning the same computer. I will post them again for you:) Copied direct from YOUR messages. You want to play games? You are lying and fabricating false information about me and here is the PROOF. Now read the numbers very carefully, Terry...your IP is 64.230.141 on your email address vfr99_2001@yahoo.net gee, whats the IP on Franks email (lakeme7@hotmail.com (Frank who I supposedly ripped off for an aor) and Randys email(waranty6@hotmail.com (Randy)? Wow. 64.230.141. Yeah look a little closer. We played your email games and you lost. And, now, you expect me to take your word that you never received the scanner? You started this, and now, as far as I am concerned, the games are over, and this finishes it. No more games and lies. I would demand an apology and an explanation, but I don't think you have it in you, and I probably wouldn't believe you anyway. You should read more, Terry.

That's all for me. I proved my point. Now enough of this bullshit and back to the NG topic - scanners.

JD

Hi Folks: I just bought a pro95 &,
can someone tell me an easy way to scan all freqs, it seems all i can get it
to do is, seperate, marine, aircraft, policefire,trunk
will scan each group but not to cycle through them all,
any info would be great, thanks

Do your self a favor, stick that finger up your ass and rotate it. I reported the results "I" got. I can't help it if they were better than the other person is reporting to get. I can't prove it to you, so you'll just have to accept it. If you don't want to, that's fine too. I don't give a good F*&K. It means nothing to me. If you don't like the truth, then don't ask for it. The only peckerheads in here are you! ASS HOLE. Get a life. I gave a report based on facts HERE. What any one else acquires, I can't help. AGAIN - IF YOU DON'T LIKE THE UNIT, DO NOT BUY IT. IF YOU DID, TAKE IT BACK. I DON"T GIVE A GOOD SHIT. MY SCANNER WORKS FINE AND THAT IS ALL I CARE ABOUT. I didn't come here to be insulted and mocked. I reported what I know to be the truth. If you don't like it TOO DAMNED BAD. G.W.

Yes, but AR-8200 has 0.35�V or 0.85�V? In VHF NFM.

There are opposite opinions on the net.

Is AOR8200 deaf? In VHF NFM.

Maurizio

In Aus here it costs about US100 to ship in a scantenna due to its size. I looked at it a few months ago. If the aus dollar keeps going up it might become possible though.

I use a diamond X50 through a stridsberg 4 port active multicoupler.

Look DOE HEAD, I did not send any emails outside my own address, I did take the time to look up the IP's as you told me to look at line NNTP.Posting-Host

what I read was you are sharing many names in this info,

Kenny, Alden, Brent, Radiobuff all use IP 4.4.58.104 now i'm no computer wiz but if this is the line to show what your ip is- then u are all the same person?

Hope you enjoy my money :(

It looks good on paper but with zero dbi gain it is a poor performer.
Add some loss in the feedline and you may not even hear any static.

4125. Key freqs. for NYC Times Square tonight?

LOL ok last post on this juvenile crap - you go in my kill file Terry. Yeah you should read more, anyhone can play email games too. LOOK AT THE IPS YOU LIAR. I was trying to find out if you would tell a 3rd party why you would possibly fabricate a total lie about somebody else, if, in fact, you honestly did not recieve the radio. I even emailed you privately as a 3rd party and all you would tell me is that you 'messed up'. But, like most pathological liars, you will not admit a lie even when slapped on the forehead with solid proof. I expected as much. Sadly, you are no exception to the rule. Have a happy New Year you idiot. Next time you try to scam someone out of money, be a little more innovative, if that's possible.

JD - Yeah I use my own name at top of posts because I have nothing to hide or lie about. Read up on internet protocol, kiddo hehe

Sorry, group - I will not continue this thread, proved him a liar, and I am putting this idiot in killfile.

Go to this Yahoo Group:
http://groups.yahoo.com/group/PRO95/?yguid=32820385

You can join for free. On the home page their are links to downloading Don Starr's free PRO-95 software and a link for purchasing a compatible cable for the radio. This is the easiest, and best program for programming this radio! Lots of help from the group also. Very friendly and helpful people.

Yes, they are from the same IPs, he wanted to play games, I played games. Just to prove that not only he can fake emails. He fakes emails that I am a bad guy, I fake emails that I am a good guy. I could have friends and buddies post in my favor, but I don't feel the need to drag my friends into this charade. Two can play that game, but its boring now. I should have never played in the first place - this is enough bullshit. Bottom line is, I didn't fabricate emails to defame or slander him, accuse him of theft or lie about his character. I did it, and more private than public, to see if he would admit to his lies to a 3rd party. Like a kid in a store caught shoplifting with a pocketful of candy, he has been exposed and he won't admit to anything. Even though he can SEE the proof, he still continues. I don't know if that's simply idiocy or a psychological/pathological character flaw, but it is what it is. He is a liar, and I did not rip off him, or any of his alter-egos.

I challenge anyone to find ONE person I ripped off or scammed out of money on the internet or elsewhere - it's simply not fact - period. I rest my case.

Tell a Joke, Go to Jail
by Edgar J. Steele
December 28, 2003

"To know what is right and not to do it is the worst cowardice." --- Confucius

Oh, no.ï¿½ Not another antisemitic screed!

Yep.ï¿½ It isn't that there is nothing else deserving of the skewer.ï¿½ On the contrary.ï¿½ Bush II alone provides fodder for a full-time job.ï¿½ And then there's John Ashcroft, Donald Rumsfeld and Tom Ridge - all prime targets.ï¿½ And Paul Bremer, the American "overseer" in Iraq, is always good for a few laughs.ï¿½ Congo Lisa is a joke with two legs.ï¿½ And California...don't get me started.

Recently, someone whose opinion I respect observed that I lessen my credibility by harping on jews so much.ï¿½ Could be, but it's my job. Time is running out.ï¿½ Most have yet to figure out who the bad guys really are.

Most Americans have yet to tumble to the fact that a long, slow revolution has taken place in America, with the result that most of us now are on the outside, looking in.ï¿½ We pretend that we still are at the party and that the pane of glass separating it from us does not exist.

TV has accustomed us to being mere observers. There are tons of things about which I could write:ï¿½ the new Federal hate crime laws or the new Federal law requiring banks to report the contents of safe deposit boxes, just to name a couple.

Or the new legislation designed to clamp down on the private sale of gold by increasing the reporting requirements exponentially.ï¿½ And then there's all that legislation passed a week ago which, together with the Executive Orders issued, amounts to Patriot Act II without the formal declaration.

But these are just symptoms of the fundamental problem.ï¿½ And, it's a problem that has gone global. Ridge put us at level orange last week, just one color away from martial law.

"Well, gawrsh...the football games are still on TV and there's beer in the fridge!"

Yes.ï¿½ All true.ï¿½ Like a Penn and Teller sketch gone horribly wrong, we have focused on the wrong hand while the magician did the deed with the other. So far, most of us have yet to feel the boot of government directly upon our necks.ï¿½ But, some have.

America seems tyrannical only to thoseï¿½it tyrannizes.ï¿½ï¿½For now.

Already, simply because of these internet writings, I dare not travel to most Western countries, including Canada.ï¿½ The best reception I could hope for would be to be placed upon the next returning flight, you see.ï¿½ Of course, if I were not American, America would be on that list, too.

Yes, I have been audited by the IRS.ï¿½ Yes, my property has been reappraised upwards.ï¿½ Yes, they mess with me as much as they can.

Court TV broadcast the Christine trial again last week.ï¿½ I caught bits of it, each time becoming disgusted with the incredibly-biased editing job and the biased commentary of most of the anchors about the defense we erected.ï¿½

(Against the jewish prosecutor and the jewish social worker/accuser...reported upon by the Court TV jewish anchor.)

It must drive them crazy, trying to figure out how to disbar me.ï¿½ Of course, the only thing that keeps me quiet about so much that I have seen in the American legal system (names, dates, places) is the certainty of my disbarment if I were to talk openly.

For now, my bar ticket is important enough to me to keep me from spilling the beans.ï¿½ Pity.ï¿½

See how it works?ï¿½ And I am among the most outspoken in America today, as recently certified by the Southern Poverty Law Center!

But not much longer.ï¿½ The American clampdown is coming.ï¿½ Fast.

Look to Europe for our future.ï¿½ Already, it is impossible to say the things I say in virtually all European countries and in Canada.

Yes, even England, France, Italy and Germany, our erstwhile allies.ï¿½ Especially those countries, in fact. In Hungary, the democratically-elected Parliament just last week passed a law stipulating a two-year prison term for "someone who publicly insults a Jew."ï¿½

http://www.fpp.co.uk/online/03/12/Hungary_FreeSpeech.html

What's more, if the insult amounts to an _expression of "hatred", the sentence goes up to three years!

Fortunately, at the last moment, Hungary's President declined to sign the bill.ï¿½ It will be back, just like the American Federal hate-crime legislation kept coming back until it was passed recently.

Think about it for a moment:ï¿½ two years in prison for publicly insulting a jew in Hungary!ï¿½

Regardless of intent.ï¿½ They just have to have their little jew feelings hurt.ï¿½ Add a year if you mean it! I couldn't make stuff like this up, folks.

Ernï¿½ Lazarovits, of the Federation of Jewish Communities in Hungary, said, "I am very disappointed.ï¿½ I will tell you, very frankly, I hope that people who practice and promote anti-Semitism will not only be told, 'don't do that in the future,' but that they will be put in jail."ï¿½

There was no report as to whether Lazarovits was giggling when he issued this statement.

The above-cited article concludes with:ï¿½ "Despite the setbacks, the Jewish community has vowed to press ahead with its goals for strict laws against all political opposition, similar to the ones already on the books in Germany, France and Austria."

We're not talking about crimes, people.ï¿½ We're talking about the jewish equivalent of telling blonde, redneck or lawyer jokes.ï¿½ï¿½(Notice that whites are the only people about whom it is still politically correct to tell jokes.)

Tell a joke, go to jail. Itz coming.

Remember, after the New York jewish banking establishment financed the Russian Revolution, one of the first laws passed by the Bolshevik jews then in charge (recently transplanted from New York) provided the death sentence for antisemitism.

During the following fifty years, over twenty million white Christians were killed pursuant to the plan of Communism envisioned by Marx, Trotsky and Lenin, jews all.ï¿½ Coincidence?ï¿½

Think it can't happen here?

The Russian jews didn't pack all those Christians into rail cars and transport them halfway across Europe, to be fed and housed in concentration camps (then simply to gas and cremate them in mathematically impossible numbers).

They killed the Christians in the most efficient way possible:ï¿½ a bullet to the base of the skull wherever they were found.ï¿½ This contrast alone shows the "holocaust" up for the massive lie that it has become.

Itz coming. Tell a joke, die.

All the other stuff is just symptoms of the fundamental problem, folks, and that is why I have been on this extended rant.

There simply is nothing else even close to being this important.ï¿½ You have to wake up!ï¿½ Credibility be damned.ï¿½ You have to realize who is

doing this, and why.

You have to realize that they are in charge of America now:ï¿½ Wolfowitz, Perle, Kissinger, Fieth, Abrams, Grossman, Haass, Schlessinger, Zoellick, Sembler, Fleischer, Bolten, Goldsmith, Goldman, Gildenhorn, Gersten, Golden, Weinberger, Bodman, Cohen, Davis, Bloomfield, Lefkowitz, Frum, Greenspan, Bremer, Berman et al., ad nauseum.

Just a few of the top names from the current Administration, which has far outstripped the last for jewish sycophantism.ï¿½ But most of you won't, until it is too late.

If this column reaches any of the 3,000 AOL members on this list, it likely will be the last.ï¿½ My last column reached you only because I just had changed my web hoster, so that AOL hadn't yet set up the automatic blocks.

If you AOL people are reading this, you MUST switch internet providers.ï¿½ You simply have no idea how many people are being blocked from you without your knowledge.

If you have an alternate email address, please resubscribe under it.ï¿½ As always, of course, for those to whom I seem an unwelcome in-basket surprise, unsubscribes are processed immediately and permanently stay in place.

Verizon is just as bad.ï¿½ Lots of friends and clients became unreachable to me when Verizon erected its censorship blocks.ï¿½ They are back now, but only temporarily.ï¿½ Several other ISPs are equally oppressive.

Until they get the laws passed which allow them to jail people like me (tell a joke, go to jail), they use blatant censorship to keep me from contaminating your mind.

At best, ignoring how one is governedï¿½leads toï¿½government of, by and forï¿½the ignorant.

At worst, it leads to death and revolution.ï¿½ But, even then, there will be hope. Only by losing all that we have, will we finally be free.

New America.ï¿½ An idea whose time has come.
-ed

"I didn't say it would be easy.ï¿½ I just said it would be the truth." - Morpheus

I usually try to match bands, 800 Mhz antennas for the Trunking scanners that stay on 800 Mhz. and a Discone for the General Purpose scanner that has UHF & VHF channels in it.

4135. Where's the NRA on whoring as bush bitches?

Where's the NRA on whoring as bush bitches?

American soldier, Your one true loyalty should be to America, not traitor bush to rob ourselves from. Remember: bush, he ain't got no public concern worth mentioning, when it comes to the whereabouts, of more than half the American tax payers expenses regarding Iraq's jeopardized security, now being sold off as planned to the bushmob at what will be, lower than going values. Namely, your own as measured worthless.

As American Soldier, in unbiased corporate TV america, your told you're willing to DIE in servitude as a thieving bushite slave without question, a blind loyalty and obedience, not to a Just God mind You, or the Battle Hymn of the Republic, no, but to worship the demon bush in a destructive cult-like ignorance that does not even afford Your costly ongoing sacrifice, the luxury, of telling US why corporate america refuses to scientifically report on your actual consuming of MEASURED microscopic radio-active heavy metal TOXIC waste, that includes plutonium in trust, to 'bushite' your dumfuk evil comrades you'll kill with especially, or to being blowed up to smithereens by sexy rummy's cluster duds. Mr. franks and bush bitch buford blount State it is of little or no concern to corporate americans how many bomblets were used, or where they fell to kill women, children or US Patriots with, for, the glorious bushmob will take a few extra bills payable from America to the commi business partners that way for including You in indiscriminate mass murder, see?, and none are the wiser. American Patriot Soldier, repeat after me: "A proud bushite nazi soldier is a dead bushite nazi soldier halted from harming our innocent sons and daughters." Or, AGAIN, corporate america's public refusal to speak up for 'The People' (soldiers included) paying the almost half of Iraq's monthly bill going mysteriously vanished in rummy or bush's war crime pocket... Who gives a toot where it is all going wasted right bushite?, it's only You or yours who could go as the innocent in God's favor still being sacrificed next.

Look, as the very old tales tell repeatedly, the lawless Satan wager, to somehow without knowing how, become

omnipotent ruler as tyrannical dictator of this forsaken World, leaving US ALL including Johnny, deprived our rights to justice and freedom, and instead, to the lot of US, be ACTUALLY put up on a cross to die again metaphorically for unarrested bush to continue example with, as an illiterate barbaric enemy of "The Man", just like, isn't going to happen in this lifetime. I ain't no fictional character, and as true blooded Patriot, hate the bush demon war monger during breakfast, lunch, and supper. And besides, I'd personally kill bush first before that neither world tried. Trust US, G, or I single handedly as a man, will triumph over traitor bush's criminality, as the American cop killing 9/11 perpetrating war profiteering savage he is as antiChrist, it's just, will you like Talk Radio in America censors, and rich CNN celebs readily encourage, silently continue to watch your fellow family murdered for bush bitch buford blount, and still refuse to voice objection nor take any action in defense of all that is Our World truly suffering as Yourself included? I despise bush like every alive person who would read this is.

Refuse to speak for Your own freedoms truly pirated by bush, and you'll likely continue to lose out really like America currently is. Refuse to help our desperately pleading God you know being victimized in Your name truly, and you will bare the consequences of being forsaken. Maybe even, towards an end you'll declare, someone else has forsaken you, when it will be only yourself to blame for not speaking for all those denied their happy lives through the brutal criminal tirades of the demon antiChrist, Your Mr. bush Jr.. Again, this will never change: We had complete co-operation granting one hundred percent access through Iraq without delay, prior to bombing any of Iraq's public sector with toxic waste that contained US People. Every Iraqi child murdered served no good reason or purpose but to war God's love, and my good name. And, still today, that unarrested evil demon tyrant dictator, still chooses to sacrifice many a soft spoken, slow footed American Patriot to, so far, too few bushite nazi dumfuk losers. In addition: We have also learned, Iraq had granted surrender of Iraqi assets to give to the war criminal bushmob, if they would forego the needless indiscriminate murder of easily tens of thousands of innocent families, (like dropping cluster bombs into our residential communities), but war criminal rotten rumsfeld refused because he had already PERSONALLY set up hundreds of illegitimate targets that would, kill

primarily only innocent people while destroying public institutions, and bring home a few extra million American payments, tax free.

What more could Saddam do that he wasn't asked for? I beg you to kill the demon bush on behalf of our humanity, and on behalf of the rare American Patriot who will get rightly confused as, bush bitch buford blount's thoughtless nazi teen savages. The anitChrist must not be allowed to survive continuing such heinous war crimes against our being, and myself as the no longer reluctant standing eternal King.

Listen to witness, America's corporate news celebs will mention it is of no concern to You as the unjustly robbed from and dying for the demon antiChrist in sacrifice. Look, I as Christ too, would destroy any cowardly proud bushite nazi teen soldier victimizing my innocent family irrationally, as most, if not all able-bodied men of our world would also if forced into a decision to defend our lives from the likes of a bush bitch buford blount, or a bomb wherever death squad running tommy franks heroin pusher, but I'm told through my faith in the power of myth, the military should have one or two brave and godly Patriots still idly standing around, who would willingly chance to uphold their sworn Oath to protect their country and family, like with the American Constitution's Bill of Rights, and Justice everywhere by protecting the falsely accused, as could be, themselves, they should know now, or soon will be learning of the other way. A proud nazi bushite savage, is a dead nazi bushite savage halted from harming our innocent families irrationally, and low and behold, a good nazi bushite savage is easily found as an enemy of ALL Humanity and God, hiding as nazi vermin in the pirated, bushite military uniform, not true Americans, but enemies to US all, which includes their selves they pour toxic waste on, while the bushmob robs their 'smart' family back home, undefended, neglected, and wounded like Christ was.

Your Mr. bush Jr. is worthless to this world as a hater of American freedom to not arrest himself and rotten rummy for murdering US New Yorkers on 9/11.

All I'm looking for in this world, one human enough to join US equally as a Loyalist to Humanity, and to do everything we can together to destroy that treasonous 9/11 perpetrator, corporate america's so very deeply hated and despised this entire Universe over, Your Mr. bush Jr.. To not bravely kill or immediately arrest the

demon antiChrist along with rumsfeld the rotten, sets enslaved america tracking further down an old worn path of History, as enemies of not only the good Iraqi People bush and bremer whom openly rob from now without apology while giving out cheap candy, but of US all truly in the bigger dream without bindings. It's like bush is waging his demon war with every political body that believe evidence is a requirement to convince US who is evil, or criminal, an wallah, as if by some Supreme Will, the Son of a Just God named Johnny really comes down to our levels to raise a simple awareness through one hell of a, big time collecting plate. (Every proud bushite nazi bagged, I'm willing to pay the good deeder, ten cents per..)

Fear not my friend, the fascist bushite shall be lost by our universally wreathed good guy plot line. An evil bushite now irrationally fights against everyone's freedom for a war criminating ungodly tyrannical evil power that persecutes the innocent with murder, or torture to steal our, sworn to uphold eternal values from. If I don't destroy the demon bush antiChrist in Our defense with this last breath, someone else will, and our faith in God will with hope, find a love truly honored with respect and gratitude for being so magnificent. Never again, left vulnerable in my name as undefended to be victimized for a war monger's consequence.

Let US get out there and bag US the bush demon for God, or the Lord, Allah, or just Johnny, instead of victimizing Catholics, Muslims, Jews, or Atheists, along with all the rest as a Palestinian truly measured, encompasess everyone.

The Two Troublemakers
http://www.rense.com/general46/guilt.htm

/ / Some of the students had Palestinian passports. When they asked what they were guilty of, the [bushite nazi savage] soldiers said, "You are guilty of being Palestinian." \ \

A ungodly bushite nazi teen soldier, as an enemy of America was quoted to say also to the falsely imprisoned:

/ / "Say that you love Bush and I will give you food," \ \

Not a love for Justice, or the Bill of Rights, but a love for the American cop killer traitor bush demon robbing their very own grandparents they demand by threat of your murder, for US all as Humanity to do

likewise degenerating, sacrificing our World as cowardly slaves to benefit the ungodly bushmob 'cabal' of parasites, the enemies of everyone, including that as God's will.

/ / I told them I wanted a lawyer. They told me I had no right to a lawyer, because I was not an American citizen. \ \

"International law? I'd better call my lawyer,"
http://www.payk.net/mailingLists/iran-news/html/current/msg05842.html

/ / "International law? I'd better call my lawyer," the American President joked in response to a reporter's question at the White House. \ \

Again, by denying the rest of US as Humanity Justice, the bushites need advertise between commercial break only, "Laden did it", no need to follow the ample criminal 9/11 leads folks, because the crime they say wasn't committed by true American values. Go on along bush, cheney, and rumsfeld say, pay no attention to our evidentiary findings such as, the American FBI's documented contention, that bush's business partner, General Ahmad, funded the 9/11 'mastermind' Atta, or the CIA's, regarding bush LYING in America's name about Niger (TREASON), or MSNBC's almost Biblical Revelation, about the bushmob having a signed and sealed, 'top secret' war plan to not follow the 9/11 evidence to secure invasion of Afghanistan for Enron, at Condoleeza's desk, two days prior to the terrorist act taking place, of which when confronted, confessed as fully implemented by the Whitehouse. A 'top secret' plan to blame Laden on a crime they wouldn't actually try to arrest for with evidence, a plan arranging that would find bin in Afghanistan pleading innocence with the help of bush's partner again, General Ahmad, a crime of such magnitude, it would 'justify' a war mongers criminal invasion to thwart Enron's impending CRIMINAL bankruptcy, THIEVING FROM MOMS AND POPS, to then, ATTEMPT, to close the surviving, armed with knowledge for good reason Police investigations. All of this setting a lowly nazi bushite war criminal, frothing publicly at more than six billion + of US, to state without opinion, that We, as Humanity, are no longer afforded God's GIVEN Human Rights to defend ourselves, nor is the criminal dictates of the demon antiChrist accountable to any rules of law. Universal they publicly quip, as the not-so 'secret' ungodly bushite

doctrine of tyranny as enslavement of all that is Righteous and Holy in this World, because, hey, there is no God to speak of... and the King of kings, Son of God fellow, well.. that's all just ninepence fiction. No, WE, as all the make believers of this World, will no longer have ANY legal recourse to defend our own loved family from being stolen from through a bush bitch buford blount doing whatever criminally with dumfuk loyal nazi teen bushites leading to sacrifice for, for demon bush dictates his corporate american bred bushite nazi teen leaders, can not be held to a code of conduct, distinction, or honor. That's the bush world now you'll except without say. As an American, you're forfeiting your rights by not saying anything to protect those falling murdered in evil bush's name. American Talk Radio is waiting for your call to be hung up on.

All Nations outside of America are a politician's friend, and nobody is going to vote to incriminate ourselves for something we would be innocent of. For bush, Ashcroft, and rumsfeld to contend, humans outside of bush america's border, are no longer afforded the rights of being, and bushites can rob our Universe and there is nothing anybody can do about it, isn't going to sell well anywhere. The criminals have enough of a time not getting caught for the things that they do, and almost no one but the lifeless, would stand silently with bush while needlessly murdering ourselves as the innocent.

See?, when bush bitch buford blount murderers innocent people, often their surviving friends and family take it out by killing bushite soldiers that mindlessly follow bush bitch buford blount's criminal command. And, why shouldn't we? The unarrested bush bitch buford blount confesses to murdering thousands of good honest People, for no objective, but to let the bushmob rob even further more children from US all. Kill bush for the love of Jesus, please.

Notice to the World: Literate American Soldiers have not voiced written objection to my writing, (us.military.army) but for the exceptionally rare bushite nazi savage, who sorrily slack, others shouldn't be allowed to tell the truth about polls, 9/11 criminal investigations, or bush and rummy getting the Patriots murdered for pension thieves and heroin pushers to tyrannically profit at our devolvements. Encouraging US to continuing in bush's name getting robbed and murdered irrationally? no rights to defend ourselves from crime in a court of law they say?, without a God, or any

reason for love of this world whatsoever? The bushites think that they can first degree murder our world's women and children, our freedoms as Justice for US all, and miraculously, as the result, will bring our entire, dazed and confused World to it's knees as the whore of Babylon. Indefinitely. (Not like a real Whore mind you, most crack-addicts, and even some G men, hold limits on how far they'll go victimizing the innocent to glorify a blatantly evil and ungodly enemy of all that is good and righteous in this world.

Anyway.

The CIA, and the FBI are surely in agreement with US, on this indivisible Justice thing. The quicker bush dies as unarrested traitor by the hands of a true American Patriot, the sooner an explanation will be demanded as forth right and coming.

Again, American soldier, wake up, and kill bush for sacrificing your friends and family to die as cowards, too afraid to stand with God in defense of the once great American flag. My America, is the land of the not so stupid, and brave enough to kill unarrested bush and rumsfeld for 9/11 almost immediately, or any other war criminating enemy of America fighting to not have our Justice served by nabbing the true 9/11 suspects.

Through a legal lens - the attack and occupation of Iraq http://electroniciraq.net/news/printer1262.shtml

/ / The International Covenant on Civil and Political Rights, RATIFIED by both the U.S. and Britain, pulls no punches on this count: "Any propaganda for war shall be prohibited by law" (Article 20). \ \

This is what bush needs to be immediately arrested on for his Niger claims, if you see him not behind bars awaiting public trial, do the American Police force and soldiers everywhere a favor, and kill the escaping demon bush for the love of Your life wills it.

By protecting the demon antiChrist bush for continuing in Our names to rob from Humanity by breaking American laws willingly, will now be a public declaration supporting crime against our betters. I will not stand motionless while bush and rumsfeld with bremer persecute school teachers not guilty of criminal offences, while pirating Iraq's wealth for Dutch-Shell, Worldcom, and double billers, commi Halliburton, all the while, feeding American Patriots radio-active toxic waste to die as losers. Think Patriot.

Arthur MacArthur "Those forty minutes when I defied my orders, were the keystone of my career." A career that would lead him to the highest rank in the United States Army. Saving many lives he did by doing so bravely.

His son later, defying Hoover, smashed thousands of American WWI vets, who were demanding their promised checks to save themselves from starvation. Winning he did, corporate banking's recognition and praise as a savior of the american way of life, and The People?, they ate it again when in 1950, at the age of 70, defying Truman, launched a win sumtin at all costs attack against China, that quickly during the unreported stupid needless slaughter of countless American teens, forced Truman to concede defeat by begging for a immediate truce with China while firing MacArthur, who came home to giant demonstrations of love and affection for sacrificing American lives forgotten to the accolades of corporate america's unsung hero.

George S. Patton Jnr. "It's no fun to say to a man you love, go out, go out and get killed, and we have had to say it, and by God they have gone..."

Johnny Wizard "Let US just get bush instead friend."

For the love of life and countries, kill bush as traitor to all our Humanity.

Your unbroken eternal Warrior,
as acting Servant and King,

the one and only,
as staring Johnny Wizard,
the true Son of Man

P.S. My reader, I taunt you again: forward these words of love or hate as if they were of Your own concern. America I think Will be interested in this public outrage of the silent majority, an outrage that will ecplise into an international scandal of such proportions, it just might win US the newscast with the facts on Justice ruling our way. (I am excepting all reasonable job offers. Hint hint.)

--

A bushite nazi soldier's motto: Do NOT kill demon bush for the love of God as true Patriots would, but war your comrades in arms with toxic cluster bombs to secretly kill yourselves with later on, including US as the innocent, our children included, while STEALING, not going nowhere public Iraqi institutions, including desperately needing humanitarian aid shipments, starving

the poorest of the poor, all to please and glorify the
pension thieves of our Grandparents, and the heroin
pushers to our school kids.

--

> To my friends in Iraq, don't let corporate american
> media divide yourselves from community as equal
> participators. An Iraqi, is foremost, a member of our
> Humanity, and just like the rest of US, hate the God
> betraying anti-American demon antiChrist bush, more than
> anything else in the Universe for persecuting the
> innocent while killing coppers to steal our assets
> undefended without a leader to speak out everywhere for
> our living rights included.

--

Free to be living justly for yourself
truly as caring to know this as everything

What a horrible day as history. We witness the likes of
The happen to be "wealthy" as extremely disturbing
american, Bill Hemmer or Blitzer, or CBC's corporately
managed professional news teams, who would as they have
done, propagandize our communities with intentional
deceit to not cover, the top priority established facts
on our actual murders, and happily watch US fall further
robbed, as Mr. bush Jr. victims, while feigning a just
representation on behalf of our civilization. Look,
phone them yourself. These corporate cultists do not
offer any counter to the facts that stand before US all,
but for to practice censorship against Humanities
interest in nabbing the prime 9/11 suspects. There is
no dispute found with those who are aware of the
evidence that directly implicates bush Jr. And rumsfeld
for our murders on 9/11. But Bill doesn't want to
actually work for the People to protect the interests of
Americans as police officers, such as those directly
involved in the criminal investigations, and instead,
sides to leave yourself in the dark on bush Jr.'s true
nature, as the super evil anti-Christ, actively,
actually, really, no doubt about it, trying to further
destroy the American dream as no longer Our own as
equals committed to freedom through representation.

USATODAY.com - Cluster bombs kill in Iraq

/ / During the war in Iraq, U.S. ground forces dipped into
stockpiles of more than 740 million cluster bomblets, all
with a history of high dud rates. \ \

Not knowing how new you are talking there is the Radio Shack Pro-96 handheld, Uniden BC796D base, and Uniden BC296D handheld. All in the price range of around $500 USD.

Well, it looked good on paper, but when I tried it with the antenna, it doesn't seem to ever meet the specs in the real world conditions as it should when you do the math.
